The Refugee, Asylum, and International Operations (RAIO) Directorate extends protection, citizenship, and other immigration benefits to eligible individuals. RAIO detects fraud and protects national security. RAIO has 852 permanent positions and comprises the three operational divisions. The Refugee Affairs Division is a headquarters-based operation whose officers' travel to conduct refugee processing. The Asylum Division has eight domestic asylum offices. The International Operations Division has three overseas district offices (Mexico City, Bangkok, Rome) and 29 field offices. With a broad footprint extending from U.S. embassies and consulates to additional refugee processing locations, RAIO is the face of USCIS abroad. Only 5% of the International Operations Division is included in the Current Services level. The other 95% is funded through IEFA.

RAIO officers conduct refugee and asylum interviews in the United States and in dozens of overseas locations, they authorize parole for individuals in emergent and humanitarian circumstances, and conduct a full range of other immigration benefit adjudications. RAIO officers reunite separated refugee and asylee family members, unite prospective adoptive parents with children who are in need of a home, and travel to overseas military bases to naturalize men and women as U.S. citizens who serve in the U.S. military. RAIO administers the Cuban and Haitian Entrant Program (CHEP), providing multi-million dollar grants to non-governmental organizations that provide orientations and

resettlement services to Cuban and Haitian migrants paroled into the U.S. In furtherance of USCIS' mission and United States interests, RAI0 liaises with United States and foreign government, international organizations, civil society, and private entities worldwide. RAI0 is vigilant in safeguarding the integrity of USCIS' various programs by deterring and detecting fraud and threats to national security.

FY 2009 Accomplishments:

- Completed 110,000 refugee determination interviews to support 75,000 refugee admissions to the United States.
- Implemented a comprehensive refugee standard operating procedure and expanded and improved capacity to capture and check biometrics for applicants for refugee resettlement.
- Achieved a six-month cycle time measured in real time for affirmative asylum.
- Completed more than 33,000 asylum applications resulting in 5,881 cases pending – an historic low.

FY 2010 Planned Activities:

- Conduct 95,000 refugee interviews to support up to 75,000 refugee admissions pursuant to the President's annual determination.
- Enhance the integrity of refugee adjudications by continuing to work with interagency partners to address vetting procedures and protocols.
- Expand and institutionalize the RAI0 Quality Assurance program piloted in FY 2009.
- In coordination with the Department of State, re-launch the refugee Priority 3 program for family-based access to the U.S. Refugee Admissions Program (USRAP), including the use of DNA evidence as appropriate.
- Provide specialized training for Supervisory Refugee Corps officers.
- Participate in interagency consultations with stakeholders to examine the refugee resettlement program.
- Improve the information on the USRAP available to the public on the USCIS website.
- Implement mechanisms to solicit information from adjudicators and supervisors regarding training needs, including information gathered through quality assurance reviews, and develop a national training agenda to meet adjudicator and supervisor educational needs.
- Establish and implement a country of origin information research and field engagement strategy.
- Analyze jurisdictions of asylum offices to determine whether there is any need for amendments and, if so, take appropriate actions to adjust jurisdictions.
- In coordination with the USCIS I-730 working group, revise the asylee and refugee following-to-join process to enhance efficiency and integrity, including information technology changes and implementation of procedures for the interview of domestic I-730 beneficiaries.
- Develop joint RAI0 training for all new Asylum and Refugee Officers.

FY 2011 Planned Activities:

- Continue a robust, worldwide schedule of circuit rides to support the annual refugee admissions ceiling.
- Identify opportunities to further enhance the integrity of refugee processing through strategic partnerships and the use of technology.
- Deliver targeted in-service training to address issues identified through the Quality Assurance Program, in addition to existing training programs.
- Work with program partners and stakeholders to improve the USRAP.
- Implement I-730 adjudication requirements and procedures.
- Implement new technologies and processes to enhance the integrity of asylum case processing.
- Provide training to new and established asylum officers annually, weekly, and periodically, developing new training programs to meet adjudicator and supervisor educational needs.
- Implement Joint RAIO training for all new Asylum and Refugee Officers.

Total Change 2010 to 2011	17	20	7,000

USCIS requests \$18,000,000, 23 positions, and 23 FTE for this activity.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Resources are requested for 23 positions, 23 FTE and \$18 million to support the mission and infrastructure of the Office of Citizenship to promote the rights and responsibilities of citizenship and provide integration tools and resources for immigrants, organizations, and other stakeholders. With this funding, the Office of Citizenship will:

- Develop and disseminate citizenship education and English as a Second Language (ESL) resources for immigrants and organizations
- Provide training and technical assistance to educators and volunteers preparing immigrants for citizenship
- Build community capacity to prepare immigrants for citizenship through a competitive grant program;
- Promote citizenship through outreach and targeted integration messages.

USCIS provides a valuable role in coordinating federal integration efforts and raising awareness of the importance of integration and citizenship among all sectors of society. Key to the success of this program are partnerships with state and local governments, U.S. businesses, non-profits, faith-based organizations, and academia, as all have important roles to play in improving integration.

#### FY 2009 Accomplishments:

- Through the competitive Citizenship Grant Program, USCIS awarded \$1.2 million to 13 community-based organizations nationwide to promote the rights and responsibilities of citizenship through citizenship education and naturalization preparation programs. The organizations estimate they will be able to provide direct citizenship services to more than 4,400 legal permanent residents from countries as diverse as Afghanistan, the Dominican Republic, El Salvador, and Russia, among others, and will be able to conduct citizenship-related outreach reaching an estimated 50,000 immigrants.
- USCIS began administering a new naturalization test that will more effectively assess an applicant's knowledge of U.S. history and government and ensure uniform test administration. The overall pass rate for the new test is currently above 90 percent.
- Training was provided in areas of American history, civics, and the naturalization process to volunteers and adult educators working to prepare adult immigrant students for U.S. citizenship. Throughout the year, USCIS held 18 workshops across the country for more than 1,100 volunteers and adult educators. A Master Teacher Course for its EL/Civics Online program was also developed. The course now provides in-depth information and teaching resources for users. The online course registered more than 2,000 new users and averaged 11,000 visitors monthly.

#### FY 2010 Planned Activities:

- Administer an expanded competitive Citizenship Grant Program to promote immigrant integration and the rights and responsibilities of citizenship.
- Develop requirements and issue an award for the development of a free web-based English language learning tool for naturalization applicants.
- Enhance an online searchable database so applicants can locate English as a Second Language (ESL) and citizenship classes in their local community.
- Provide a professional development tool for volunteers to improve skills to teach citizenship-based ESL to immigrants.
- Expand citizenship education and outreach initiatives. The Office of Citizenship will raise awareness about the rights, responsibilities, and importance of United States citizenship, as well as promote the free educational resources and tools that USCIS has developed to foster immigrant integration.

#### FY 2011 Planned Activities:

- Enhance educational products and resources that welcome immigrants, promote English language learning and education on the rights and responsibilities of citizenship, and prepare immigrants for naturalization.
- Expand the free web-based English language learning tool for naturalization applicants.

- Lead initiatives to promote citizenship awareness and demystify the naturalization process for aspiring citizens.
- Monitor and evaluate the administration and content of the new naturalization test.
- Support national and community-based organizations that prepare immigrants for citizenship through the competitive Citizenship Grant Program, free educational resources, and technical assistance.
- Build partnerships with state and local governments and non-governmental organizations to expand citizenship resources in communities.
- Increase volunteer capacity through training tools and raising awareness of opportunities for volunteers to prepare immigrants for citizenship.
- Conduct training workshops and enhance professional development and classroom resources for educators and organizations preparing immigrants for citizenship.
- Guide federal integration policy and priorities and lead collaboration on integration among federal agencies.
- Lead initiatives to engage the general public on integration and celebrate the importance of citizenship to the nation.
- Utilize research and evaluation mechanisms to assess immigrant integration efforts and the impact of specific Office of Citizenship initiatives.

**Department of Homeland Security  
Citizenship & Immigration Services  
Salaries and Expenses:  
Data Center Development  
Program Performance Justification**  
(Dollars in Thousands)

**PPA: Data Center Development: Consolidate to secure data center environment**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2009 Actuals</b>	-	-	-
<b>2010 Enacted</b>	-	-	<b>11,000</b>
2011 Adjustments-to-Base	-	-	(11,000)
<b>2011 Current Services</b>	-	-	-
2011 Program Change	-	-	23,400
<b>2011 Total Request</b>	-	-	<b>23,400</b>
Total Change 2010 to 2011	-	-	12,400

**CURRENT SERVICES PROGRAM DESCRIPTION:**

FY 2011 data center development funding, to be managed through the DHS Working Capital Fund (WCF), will be used for the continuation of system and application migration to the two DHS Enterprise Data Centers for central DHS management in FY 2011. This includes:

- Discovery, migration planning, and scheduling activities specifically related to systems/applications that will transition to the DHS Data Centers in FY 2010
- Purchase of new equipment for placement in the DHS Data Centers as part of migration/transition efforts
- Installation of equipment racks at the DHS Data Centers
- Migration-related build-out of DHS Data Center infrastructure
- Transition of disaster recovery/backup/COOP (Continuity of Operations) capability to DHS Data Centers
- Installation of infrastructure support as part of system migrations at the DHS Data Centers
- Migration of USCIS hardware, systems/applications to occupy rack space at the DHS Data Centers.

## **Justification**

The Data Center consolidation efforts will standardize IT resource acquisitions across DHS Components, and streamline maintenance and support contracts, allowing for less complex vendor support and expediting response times in the event of an emergency. Benefits derived from consolidation are enhanced DHS IT security posture, improved information sharing with stakeholders, and increased operational efficiencies over time.

With respect to USCIS, the primary intent for this FY 2011 request is to begin the migration of production applications from the Manassas Technology Engineering Consolidation Center (TECC) and other USCIS offices to the DHS data centers. USCIS anticipates this will be a two-year effort, with a third year required to move the TECC Development and Test Environments completely to the DHS data centers, allowing for the closure of the TECC. The consolidation of USCIS IT systems at the two DHS data centers will provide a standard IT environment that is more secure and under DHS operational control, promote interoperability and data sharing within DHS and with other government agencies, and provided an environment for future DHS-wide IT cost savings.

## IV. Program Justification Changes

**Department of Homeland Security  
Citizenship & Immigration Services  
Salaries and Expenses:  
SAVE  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 1:** Fee Structure Reform: Systematic Alien Verification Entitlements  
PPA: SAVE  
Program Increase: Positions 182.0, FTE 182.0, Dollars \$34,000.0

Funding Profile

	FY 2009 Actuals			FY 2010 Enacted			FY 2011 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							182	182	34,000
<b>Total Request</b>	-	-	-	-	-	-	<b>182</b>	<b>182</b>	<b>34,000</b>

### *Fee Structure Reform*

Resources are requested for 182 positions, 182 FTE, and \$34 million for Fee Structure Reform that encompasses moving the Systematic Alien Verification for Entitlements (SAVE) program to appropriated financing. FY 2010 enacted funding included the budget request to move the costs of asylum, refugee, and military naturalization activities from fee financing to appropriated financing to reduce undue cost burdens on persons and business that pay fees for immigration benefits. This request expands on the FY 2010 reforms by moving SAVE to appropriated financing. This activity bears virtually no relationship to the cost to the administration and adjudication of immigration benefits yet costs for it are currently attached to the price of applications and petition. A proposed rulemaking during FY 2010 will incorporate this request into a revised fee structure.

### **Justification**

The request seeks \$34 million, 182 positions, and 182 FTE to support the cost of the SAVE program. The SAVE program currently helps more than 330 State, local, and Federal agencies validate the provision of government benefits by checking immigration status. Fees on agency users support less than 25 percent of program operations, resulting in costs being incorporated into fees of unrelated activities. The request assumes that all existing fees would be dropped and \$22 million of appropriated funding

will support base SAVE operations. Remaining funds will be used to improve cost integration with the E-Verify program and improve SAVE operations.

With respect to operational improvements, resources will be used to improving customer service and outreach efforts to assist customers with training and proper use of the system, as well as enhance business processes and information technology systems to increase efficiency and effectiveness. Among other things, resources would be used to:

- Improve the SAVE website.
- Enhance the online SAVE tutorial with compliance requirements and other information.
- Development of a Profile-Based System to update the current profile structure to ensure each user receives only the information required to make a determination.
- Develop a process to leverage agency fraud detection processes and tools.
- Establishing a self-audit capability for customers to monitor and address system misuse and abuse.
- Conduct a root cause analysis of SAVE referrals to minimize the need for 2nd and 3rd step verifications.
- Develop an internal process and IT solution to assist in identifying system data errors.
- Analyze potential data source improvements to connect directly to CLAIMS3 and/or CISCOR
- Complete a Record Data Matching project.

**Impact on Performance (Relationship of Increase to Strategic Goals):**

Additional funding above base operations will help to improve security through enhanced immigration services. We will increase security by denying immigration benefits to persons wishing to do us harm and integrating our information with that of other Federal agencies with an aim of keeping out dangerous individuals.

**Department of Homeland Security  
Citizenship & Immigration Services  
Salaries and Expenses:  
Immigrant Integration & Citizenship  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 1:** Fee Structure Reform: Immigration Integration  
PPA: Immigrant Integration activities  
Program Increase: Positions 17.0, FTE 17.0, Dollars \$7,000.0

Funding Profile

	FY 2009 Actuals			FY 2010 Enacted			FY 2011 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							17	17	7,000
<b>Total Request</b>	-	-	-	-	-	-	<b>17</b>	<b>17</b>	<b>7,000</b>

*Fee Structure Reform*

Resources are requested for 17 positions, 17 FTE, and \$7 million for Fee Structure Reform that encompasses moving the Office of Citizenship to appropriated financing. FY 2010 enacted funding included the budget request to move the costs of asylum, refugee, and military naturalization activities from fee financing to appropriated financing to reduce undue cost burdens on persons and business that pay fees for immigration benefits. This request expands on the FY 2010 reforms by moving the Office of Citizenship to appropriated financing. This activity bears virtually no relationship to the cost to the administration and adjudication of immigration benefits yet costs for it are currently attached to the price of applications and petition. A proposed rulemaking during FY 2010 will incorporate this request into a revised fee structure.

**Justification**

The request seeks \$7 million, 17 positions, and 17 FTE to support moving currently-fee funded base operations of the Office of Citizenship to appropriated financing. FY 2010 enacted funding included \$11 million in appropriations for Immigrant Integration activities undertaken through the Office. While this function is extended within the FY 2011 request, nearly \$7 million of base costs are incorporated into fees of unrelated activities. The request will eliminate fee-based financing for the entire Office of Citizenship.

**Impact on Performance (Relationship of Increase to Strategic Goals):**

Additional funding above base operations will help to improve security through enhanced immigration services. We will increase security by denying immigration benefits to persons wishing to do us harm and integrating our information with that of other Federal agencies with an aim of keeping out dangerous individuals.

**Department of Homeland Security  
Citizenship & Immigration Services  
Salaries and Expenses:

(Dollars in Thousands)

**Program Increase 1:** Data Center Development  
 PPA: Data Center Development: Consolidate to secure data center environment  
 Program Increase: Positions 0.0, FTE 0.0, Dollars \$23,400.0

Funding Profile

	FY 2009 Actuals			FY 2010 Enacted			FY 2011 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							-	-	23,400
<b>Total Request</b>	-	-	-	-	-	-	-	-	<b>23,400</b>

Resources are requested in FY 2011 for data center development funding, to be managed through the DHS Working Capital Fund (WCF). These funds will be used for the continuation of system and application migration to the two DHS Enterprise Data Centers for central DHS management in FY 2011. This will include:

- Discovery, migration planning, and scheduling activities specifically related to systems/applications that will transition to the DHS Data Centers in FY 2010
- Purchase of new equipment for placement in the DHS Data Centers as part of migration/transition efforts
- Installation of equipment racks at the DHS Data Centers
- Migration-related build-out of DHS Data Center infrastructure
- Transition of disaster recovery/backup/COOP (Continuity of Operations) capability to DHS Data Centers
- Installation of infrastructure support as part of system migrations at the DHS Data Centers
- Migration of USCIS hardware, systems/applications to occupy rack space at the DHS Data Centers.

**Justification**

The request seeks \$23.4 million, to support the cost of the data center development. These efforts will standardize IT resource acquisitions across DHS Components, and streamline maintenance and support contracts, allowing for less complex vendor support and expediting response times in the event of an emergency. Benefits derived from

consolidation are enhanced DHS IT security posture, improved information sharing with stakeholders, and increased operational efficiencies over time.

With respect to USCIS, the primary intent for this FY11 request is to begin the migration of production applications from the Manassas Technology Engineering Consolidation Center (TECC) and other USCIS offices to the DHS data centers. USCIS anticipates this will be a two-year effort, with a third year required to move the TECC Development and Test Environments completely to the DHS data centers, allowing for the closure of the TECC. The consolidation of USCIS IT systems at the two DHS data centers will provide a standard IT environment that is more secure and under DHS operational control, promote interoperability and data sharing within DHS and with other government agencies, and provided an environment for future DHS-wide IT cost savings.

## V. Exhibits and Other Supporting Materials

### A. Justification of Proposed Legislative Language

For necessary expenses for citizenship and immigration services, [\$224,000,000] \$385,800,000, of which [\$50,000,000] \$207,000,000 is for processing applications for asylum or refugee status[; of which \$5,000,000 is for the processing of military naturalization applications]; and of which \$137,000,000 is for [the basic pilot program (] immigration verification programs, including the E-Verify Program[)], as authorized by section 402 of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (8 U.S.C. 1324a note), to assist United States employers with maintaining a legal workforce: Provided, [That of the amounts made available for the basic pilot program (E-Verify Program), \$30,000,000 shall remain available until September 30, 2011: Provided further,] That notwithstanding any other provision of law, funds available to United States Citizenship and Immigration Services may be used to acquire, operate, equip, and dispose of up to five vehicles, for replacement only, for areas where the Administrator of General Services does not provide vehicles for lease: Provided further, That the Director of United States Citizenship and Immigration Services may authorize employees who are assigned to those areas to use such vehicles to travel between the employees' residences and places of employment: [Provided further, That none of the funds made available under this heading may be obligated for processing applications for asylum or refugee status unless the Secretary of Homeland Security has published a final rule updating part 103 of title 8, Code of Federal Regulations, to discontinue the asylum/refugee surcharge: Provided further, That none of the funds made available under this heading may be obligated for development of the ``REAL ID hub" until the Committees on Appropriations of the Senate and the House of Representatives receive a plan for expenditure for that program that describes the strategic context of the program, the specific goals and milestones set for the program, and the funds allocated for achieving each of these goals and milestones:] Provided further, That none of the funds made available in this Act for grants for immigrant integration may be used to provide services to aliens who have not been lawfully admitted for permanent residence.(Department of Homeland Security Appropriations Act, 2010.)

**PPA Mission Statement**

The SAVE program helps state, local, or federal agencies determine a non-citizen's eligibility for public benefits by checking their immigration status. As of January 2010, the SAVE program has a total 347 registered agencies. This includes 185 state agencies, 36 DMVs, 98 local agencies, and 28 federal agencies. Through December 31, 2009, there were 2.6 million SAVE queries run through the system. Large agency customers include the Social Security Administration, the U.S. Department of Housing and Urban Development, the U.S. Department of Education, and the California Department of Motor Vehicles.

**Summary Justification and Explanation of Changes**

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
<b>11.1 Total FTE &amp; personnel compensation</b>	-	-	17,416	17,416

Salaries and Benefits provide for \$17,653,000 and 182 FTE. The FY 2011 increase of \$17,653,000 is due to the inclusion of the SAVE Program in it's entirety in the Salaries and Expenses Account.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change

**PPA Mission Statement**

The E-Verify Program, a key component of the Department's Secure Border Initiative, involves electronic verification checks of the Social Security Administration and DHS databases, using an automated system to verify employment authorization.

The potential for system abuse grows with an increase in registered employers. By increasing and expanding aggressive monitoring and compliance initiatives fraudulent, discriminatory or misinformed use of E-Verify will be minimized, specifically, fraudulent use of Social Security numbers or Alien numbers. Aggressive monitoring and compliance will also deter prescreening of job applicants and adverse action against employees who receive tentative non-confirmation notices.

The requested amount will allow E-Verify to continue to support and operate a comprehensive electronic employment verification program, and initiate a phased-in expansion and improvement of existing employment verification systems, to ensure compliance with U.S. immigration and employment laws.

## Summary Justification and Explanation of Changes

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
11.1 Total FTE & personnel compensation	15,053	26,270	29,654	3,384

Salaries and Benefits includes \$39,223,000 for 338 positions and 338 FTE in FY 2011. This is an increase of \$727,000 for pay inflation and \$3,864,000 for annualization of 40 FTE.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change

**PPA Mission Statement**

The REAL ID Act requires that a state must verify the information on source documents before it can issue a REAL ID-compliant driver's license or identification card to applicants.

The funding provided through USCIS is aimed specifically at the development and deployment of enhanced network communications and data verification capabilities that will enable States to meet the verification requirements of the REAL ID Act and Final Rule.

The integrity of the immigration system is facilitated if State efforts through REAL ID discourage the use of false immigration information to unlawfully obtain benefits.

**PPA Mission Statement**

This program will fund activities associated with improving the integration of immigrants into the United States including: grants to community-based organizations for citizenship preparation; expanding English language learning aids; supporting a training framework for local literacy organizations to prepare volunteers to teach English and citizenship to immigrants; and, promoting citizenship through targeted integration messages. Key to the success of this new program is establishing partnerships with state and local governments, U.S. businesses, non-profits, faith-based organizations, and academia as all have important roles to play in improving integration. USCIS will also work with other federal agencies to coordinate efforts aimed at integration.

## BUDGET REQUEST AND SUPPORTING INFORMATION

### Immigration Examinations Fee Account:

## I. Appropriation Overview

### A – Mission Statement for Immigration Examinations Fee Account:

The Immigration Examinations Fee Account (IEFA) is the primary program funding source for USCIS, comprising approximately 95 percent of the total USCIS budget. Fees collected from the filing of immigration benefit applications are deposited into the IEFA and used to fund the cost of processing immigration benefit applications and associated support benefits and the cost of similar benefits provided to other immigrants where fees are waived.

### B – Budget Activities:

#### Adjudication Services

Through a network of 230 local offices, Application Support Centers, Service Centers, Document Production Facilities, Asylum Offices, and 29 International Offices, USCIS is responsible for the timely and quality processing of:

- *Family-based petitions* - facilitating the process for close relatives of U.S. citizens and permanent residents to immigrate, gain permanent residency, work, etc.
- *Employment-based petitions* - facilitating the process for current and prospective employees to immigrate or work in the U.S. temporarily
- *Asylum and Refugee petitions* - adjudicating asylum applications and processing refugees
- *Naturalization petitions* - processing applications of those who wish to become U.S. citizens

Secure identity cards and travel documents booklets are personalized and provided to recipients of certain immigration benefits as evidence of immigration status and for use in proving eligibility to work and live in the United States and or to re-enter the United States after travel abroad. Premium processing revenues collected into this account also fund the Business Transformation Program which is a multi-year effort to modernize USCIS business processes and supporting systems.

#### Information and Customer Services

Through multiple channels of available assistance, including the USCIS website, toll-free call centers (National Customer Service Call Centers), and face-to-face appointments, these services make it easier for customers to get the information they need, when they need it. On an annual basis, USCIS:

- Serves more than 16 million customers via the National Customer Service Call Centers
- Serves approximately 3 million customers through information counters at local offices

#### Administration

The Administration activity supports a variety of headquarters offices including Administration, Chief Financial Officer, Chief Counsel, Communications, Congressional Relations, Policy and Strategy, Chief Human Capital Officer, and Security and Integrity.

#### Systematic Alien Verification for Entitlements (SAVE)

The SAVE program assists organizations by providing a non-citizen applicant's immigration status, in order to determine eligibility for federal, state, or local public benefits. SAVE also supports implementation of the requirements of the REAL ID Act of 2005 by making it easier for states to verify immigration status for the issuance of driver's licenses and identification cards. For 2012, USCIS is requesting appropriated funding for SAVE.

#### **C – Budget Request Summary:**

USCIS is committed to conducting a fee study every two years in order to ensure that immigration fees are set at a level to recover costs and these fees reflect productivity improvements resulting from process changes and technology upgrades. A fee review for FY 2010 and FY 2011 was initiated and USCIS plans to update this study to account for decisions made in this Budget.

USCIS requests 9,403 positions, 9,403 FTE, and \$2,375,479,000 for FY 2011. This includes \$16,859,000 for pay inflation and \$27,606,000 for GSA Rent.

Total Change 2010 to 2011	(289)	(289)	(115,268)

USCIS requests 8,365 positions, 8,365 FTE and \$1.955 billion to process millions of immigration benefit applications while maintaining backlog goals, and ensuring the security and integrity of the immigration system.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

FY 2011 planned funding for Adjudication Services includes \$1,145.9 million for District Operations, \$482 million for Service Center Operations, \$60.9 million for International Operations, \$102.4 million for Records Operations, and \$164 million for Business Transformation.

Each year, millions of people apply for various types of immigration benefits from the U.S. Government. Immigration Services Officers (ISO) determine eligibility for a wide variety of benefits. They review applications and often conduct interviews of the applicants. ISOs have the dual responsibility of providing courteous service to the public while being alert to the possibility of fraud and misrepresentation and national security concerns. ISOs are assigned to one of 60 field offices located in 26 Districts nationwide; in one of four Service Centers located in St. Albans, VT, Lincoln, NE, Dallas, TX, and Laguna Niguel, CA; or in the National Benefits Center located in Lees Summit, MS.

In coordination with DHS and other federal agencies, USCIS combats immigration benefit fraud through the Office of Fraud Detection and National Security (FDNS). FDNS staff analyze and identify fraud patterns and trends, and document evidence of fraud for administrative action. USCIS will continue to implement fraud detection measures in Service Centers, field offices, and Refugee, Asylum, and International programs and train adjudications staff to proactively identify fraud/security profiles while considering an application. Also, USCIS works in coordination with other components of DHS, and with agencies such as the Departments of Labor and State, and the Federal Bureau of Investigation (FBI) to conduct background checks.

Adjudication Services also includes funding for business transformation efforts and the Office of Information Technology. The Transformation Program oversees a multi-year effort to transform USCIS' current paper-based data systems into an online, electronic system that will enhance customer service, better prevent future backlogs, and improve USCIS efficiency while also strengthening security.

The Transformation Program coordinates transformation initiatives across USCIS and with other immigration enterprise partners at DHS and other federal agencies. Transformation manages multiple contracts including a Solutions Architect (SA) contract to assist with acquiring, integrating, and delivering the services to transform business processes; a Program Management Office support contract; a Federally Funded Research and Development Center contract to assist in program oversight functions; and other specialized contracts as needed to assist in overall implementation.

The Transformation Program will simplify, improve, and automate end to end USCIS business processes. USCIS awarded a single task order in 2008 to International Business Machines, Inc. (IBM). The scope of the task order includes all program and project level planning and execution activities necessary to refine, design, and build transformed business processes and services. The solution within the task order includes two increments spanning five releases to be deployed over five years. The transformed USCIS processes will address security/integrity gaps of the immigration system by effectively collecting, analyzing, and sharing information used to verify identity, eligibility, and status. These processes will address service gaps by providing timely and accurate information online to customers 24 hours a day.

The Office of Information Technology supports USCIS operations with technology services and solutions to transform our Nation's immigration system. To create a disciplined organization focused on delivering strategic business value and high quality IT service through our people, processes, and technology.

Another function of the USCIS Adjudication Services is conducting Naturalization Oath Ceremonies. These are held both state-side and overseas; however, at this time ceremonies held overseas are strictly reserved for active members of the United States Armed Forces and their spouses. Once the Oath of Allegiance to the United States is taken, the applicant receives a Certificate of Naturalization to serve as evidence of United

States citizenship. Current and prior year appropriations report language instructed USCIS to identify funding budgeted to naturalization and oath of allegiance ceremonies. The budget estimate for FY 2011 is \$27.1 million. Projected spending for FY 2010 is \$26.3 million. Prior year estimated spending for FY 2008 and FY 2009 was \$45.9 million and \$33.9 million, respectively.

#### FY 2009 Accomplishments:

##### Office of Fraud Detection and National Security:

- Initiated the Administrative Site Visit and Verification Program ASVVP and completed 4,861 site visits.
- Began to expand FDNS Operations overseas, starting with two Fraud Fee Account funded Immigration Officer positions in Monterrey, Mexico and Frankfurt, Germany.

##### Domestic Operations Directorate:

- Sent all Travel Documents via the new secure mail process.

##### Refugee, Asylum, and International Operations:

- Completed 110,000 refugee determination interviews to support 75,000 refugee admissions to the United States.
- Implemented a comprehensive refugee standard operating procedure and expanded and improved capacity to capture and check biometrics for applicants for refugee resettlement.
- Achieved a six-month cycle time measured in real time for affirmative asylum.
- Completed more than 33,000 asylum applications resulting in 5,881 cases pending – an historic low.

##### The Office of Transformation:

- Transformation in coordination with OIT secured Level III Federal Enterprise Architecture (FEA) compliance with the USCIS Enterprise Architecture. Level III architecture compliance develops target architecture then aligns the architectural elements to DHS programs and lines of business. It addresses the priorities and performance objectives identified in the DHS strategic plan through the target architecture and the EA transaction strategy. Level III compliance communicates a clear line of sight between EA layers (performance, business, data, services, technology and security), and develops an enterprise-wide or segment scope in its target architecture.
- Transformation successfully completed a significant contract modification to include exercising two six month option periods.
- Transformation received approval for the Integrated Master Schedule (IMS) at the DHS Integrated Baseline Review.
- A draft regulation was developed to support the Transformation business environment.
- Transformation stakeholder engagement and communication efforts were advanced for both internal and external stakeholders.

- “To-be” business process models were completed to a detail level three by Transformation Working Integrated Product Teams.

FY 2010 Planned Activities:

The Office of Transformation:

- Transformation obtained approval from DHS on December 18, 2009 to re-sequence the Solutions Architect contract. Re-sequencing the implementation of immigration benefit types will result in following the natural immigration lifecycle and will enable electronic adjudication earlier, thereby strengthening the impact of Transformation’s first deployment and immediately showing a clear tie to mission results. The revised strategy will first address the Non-Immigrant line of business. In following the immigration lifecycle, the remaining benefit case work will be deployed in the following order: Immigrant, Humanitarian, and Citizenship.
- In FY 10, Transformation will begin development of the first increment of Transformation – Non-Immigrant – and the associated releases. Release A development work will begin in FY 2010 and is anticipated to be fully deployed in late FY 2011. Services in Release A will establish account management for individuals and provide end-to-end electronic case management functionality for a select set of primarily non-immigrant benefit types.

Refugee, Asylum, and International Operations:

- Deploy capability to improve tracking of applications processed overseas.
- Enhance consistency of adjudications overseas by issuing standardized operating procedures and implementing peer-review quality assurance program.
- Deploy biometric capture technology to overseas offices.

Domestic Operations Directorate:

- Will implement the Card Personalization Technology Refreshment technology upgrade to secure card printing platforms.
- Will introduce new Permanent Resident Card.
- Will introduce re-designed Travel Document (Refugee Travel Documents and Re-entry Permits).
- Will launch new Combined Employment Authorization/Advance Parole cards.

Office of Fraud Detection and National Security:

- Successfully deploy technology solution for H-1B pre-registration lottery.
- Increase the number of ASVVP site visits with a target goal of 25,000.

FY 2011 Planned Activities:

The Office of Transformation:

- Release A is anticipated to be deployed with account management for individuals and provide end-to-end electronic case management functionality for a select set of primarily nonimmigrant benefit types. Transformation will also begin

development of Release B anticipated to be fully deployed in early FY 2013. Release B will establish account management for organizations and provide end-to-end electronic case management functionality for the remaining non-immigrant benefit types.

Domestic Operations:

- Maintain a six-month cycle time for military naturalization
- Maintain a 4 and 5 month national cycle time for adjustment of status and naturalization benefits.
- Personalize 2.021 million Permanent Resident Cards, 722,000 Employment Authorization Documents, and 256,255 Travel Documents

Office of Fraud Detection and National Security:

- Work with the FBI National Name Check Program (NNCP) to refine procedures for the electronic submission of FBI name check requests as well as the electronic receipt, posting, and storage of name check results.
- Conduct further immigration benefit fraud studies under the Risk Assessment Plan to identify fraud indicators that can be used in automated and adjudicative processes.
- Continue developing the Field Intelligence Program (FIP) by transferring initial intelligence reporting functions to the field while aligning USCIS intelligence reporting with the Department of Homeland Security Office of Intelligence & Analysis (DHSIA) standardized intelligence reporting program.

International Operations:

- Provide timely and appropriate training to all IO employees and implement established training programs.
- Evaluate efficacy of quality assurance program, adjust as necessary, and expand to all appropriate product lines.
- Routinely assess public information about IO and benefits processed overseas to ensure the information is current and accurate.
- Achieve established processing time goals for each product line for which a goal has been established.
- Implement any adjustments to office presence, size or jurisdiction identified through the workload analysis performed in FY 2010, as resources permit and, where necessary, as authorized by DOS.
- Based on evaluation of International Operations' domestic operations, assess benefits of transferring for domestic adjudication other overseas adjudications that do not require interview.

Office of Information Technology:

- Complete migration of production systems in the Technology Engineering Consolidation Center (TECC), including CLAIMS 4, National File Tracking System (NFTS), Federal Information Processing Standards (FIPS) and Microfilm Digitization Application System (MIDAS) to one of the DHS data centers.

- Successfully re-host CLAIMS3 LAN. (Moved to FY 11 due to other business needs being placed in the development schedule ahead of C3 LAN movement.
- As the result of Production Release 2 which occurs in the first quarter of FY 2011. The following system can potentially be decommissioned as the Result of Production Release 3 that occurs in first quarter of FY 12: ISRS.
- Migrate all (100%) DOJ Dallas data center mainframe applications to the DHS data center and migrate three applications from the Manassas TEC facility to the DHS data center. Overall, approximately 30% of USCIS applications will be moved to DHS facilities in FY 2011.

<b>2011 Total Request</b>	<b>269</b>	<b>269</b>	<b>83,501</b>
Total Change 2010 to 2011	-	-	(2,561)

USCIS requests \$83.5 million to provide timely, consistent, and accurate information to our customers.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Through ICS, USCIS reduces the frequency of repeated, redundant applicant contact with USCIS employees, thus improving agency efficiency. USCIS makes it easier for our customers to get the information they need, when they need it, through multiple channels of available assistance, including the USCIS website, toll-free call centers (National Customer Service Call Centers), and face-to-face appointments.

On an annual basis, USCIS:

- Serves more than 16 million customers via the National Customer Service Call Centers
- Serves approximately 3 million customers through information counters at local offices

Each year millions of people apply for various types of benefits under the Immigration and Nationality Act. Immigration Services Officers (ISOs) provide information about immigration and nationality law and regulations. They assist with a wide variety of requests, including questions on how to complete required forms, and explain the administrative procedures and normal processing times for each application. ISOs offer a range of service activities from providing information on applicant cases to problem resolution assistance on applications and petitions. ISOs also review and make decisions

on a limited array of applications and petitions. ISO positions are located throughout the country in Districts, Field Offices, and Service Centers.

Through the National Customer Service Center's six telephone centers, USCIS provides toll-free nationwide assistance to customers calling from within the U.S. Customers can access live assistance from 8:00 AM until 6:00 PM local time, Monday through Friday. They can also access recorded information (including information about the status of their specific case) 24 hours a day/7 days a week. Both live and recorded service is available in English and Spanish.

USCIS receives about 1.4 million direct information and customer service related contacts each month, or more than 16 million contacts per year. Today, over 72 percent of all information and customer service interactions are self-service. The self-service options give customers new choices that are simpler and more effective to both customers and USCIS. This option also results in significant cost avoidance when compared to what it would cost USCIS to provide live assistance to all these customers.

In-person service continues to be a critical component of the USCIS service model. To improve service levels, USCIS shifted to offering most in-person service by appointments scheduled via website. This has helped mitigate long lines and wait times, while addressing customer concerns and inquiries.

USCIS requests \$372.6 million to strengthen key management processes, systems, and administrative support activities; and to facilitate mission success and enhance the timeliness, accountability, efficiency and effectiveness of service delivery.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Outside of the offices of the Director and the Deputy Director, core offices include the following:

**Office of Administration** plans, develops, implements, and evaluates agency-wide policies, procedures, and programs for Acquisition, Asset, and Facilities Management, for the operation of centrally managed, agency-wide support activities, and for the direct delivery of administrative support to Headquarters.

**Office of Chief Counsel (OCC)** consists of dedicated legal divisions advising and representing USCIS Operations both at Headquarters and in the field. Divisions include Adjudications Law, Refugee and Asylum Law, Commercial and Administrative Law, Ethics, Field Operations, Training, and Liaison. Each division is responsible for reviewing, interpreting, and providing legal advice and guidance to USCIS operational components and OCC field staff.

**Office of Communications** oversees and coordinates communication to both internal and external stakeholders to empower employees with the tools needed to perform their jobs, educate the public regarding USCIS benefits and services, and facilitate consistent messaging and imaging for USCIS.

**Office of Congressional Relations (OCR)** maintains communication with Congress through responding to constituent concerns, promoting USCIS' priorities, proactive outreach on issues of interest, and ongoing educational activities for Members of Congress and their staff.

**Office of Ombudsman Liaison** serves as the Director's representative to the DHS CIS Ombudsman and provides customer relationship management oversight and evaluation.

**Office of Equal Opportunity and Inclusion (OEOI)** ensures individuals are not denied opportunities in employment or program-services delivery because of their race, color, religion, sex, national origin, age, disability, sexual orientation, status as a parent, genetic information or reprisal.

**Office of Policy and Strategy** directs, prioritizes, and sets the agenda for agency-wide policy, strategy, and long-term planning activities, as well as for the conduct of research and analysis on immigration services issues.

**Office of Security and Integrity (OSI)** leads a multi-disciplined security and integrity program to protect and safeguard USCIS personnel, facilities, information and assets. OSI manages the personnel and industrial security, administrative/special security, communications security, and physical security programs and oversees the security awareness training program. OSI also manages a comprehensive internal management review program of USCIS functions and protects the integrity of USCIS programs by investigating allegations of employee misconduct related to waste, fraud, abuse or mismanagement.

**Office of the Chief Human Capital Officer (CHCO)** leads the strategic management of human capital in organizationally aligning and integrating workforce planning, recruiting, orientation, training, leadership and career development, and performance standards in achieving USCIS' mission. CHCO is responsible for establishing an enterprise-wide environment for continuous learning and a culture of professional excellence and includes the Human Capital Management Division and the Training and Career Development Division.

**Office of Emergency Management and Safety (EMS)** develops, maintains and enhances USCIS' Emergency Preparedness and Continuity of Operations, and Occupational Safety and Health programs to protect our employees, ensure a safe and healthy work environment, mitigate and minimize damage or destruction of property and vital records, and ensure the continued performance of USCIS' essential functions during unexpected emergencies and/or catastrophic events.

Total Change 2010 to 2011	(182)	(182)	(19,184)

USCIS is requesting funding for SAVE through the Salaries and Expenses budget for FY 2011.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The SAVE program helps state, local, or federal agencies determine a non-citizen's eligibility for public benefits by checking their immigration status. As of January 2010, the SAVE program has a total 347 registered agencies. This includes 185 state agencies, 36 DMVs, 98 local agencies, and 28 federal agencies. Through December 31, 2009, there were 2.6 million SAVE queries run through the system. Large agency customers include the Social Security Administration, the U.S. Department of Housing and Urban Development, the U.S. Department of Education, and the California Department of Motor Vehicles.

**FY 2009 Accomplishments:**

- Implemented AAMVAnet Pilot for DMV access to SAVE for REAL-ID.
- Retired multiple access methods and migrated customers to the efficient Web-3 access method Achieved 25% growth in customer base, expanding to 300 agencies.
- Created and implemented a Memorandum of Agreement (MOA) to strengthen and standardize program requirements for enhancing overall program compliance.

FY 2010 Planned Activities:

- Develop and implement a Customer Relationship Management Plan.
- Develop an implementation plan to address surges in business activities due to new and pending legislation.
- Develop system requirements for registration re-engineering and profile-based system (PBS) / SAVE modernization.
- Establish Independent Validation and Verification (IV&V) for oversight of AAMVA Verification of Lawful Status (VLS) and REAL ID projects.

FY 2011 Planned Activities:

- Implement full-scale registration re-engineering and profile-based system (PBS) / SAVE modernization.
- Conduct assessment of source data to enhance program efficiency.
- Conduct a large-scale independent SAVE Program evaluation.
- Conduct a Six Sigma root cause analysis of SAVE referrals to minimize additional verification.

**PPA Mission Statement**

The funds from the Immigration Examinations Fee Account (IEFA), Information and Customer Services Program, are used to provide timely, consistent, and accurate information to its customers that will reduce the frequency of repeated, redundant applicant contact with USCIS employees, thus improving agency efficiency. Through multiple channels of available assistance, including the USCIS website, toll-free call center (National Customer Service Call Center), and face-to-face appointments; USCIS will make it easier for our customers to get the information they need, when they need it.

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2011 request reflects a decrease of \$1,079,000 related to Fee Reform (The Office of Citizenship, the SAVE Program, and the Refugee and Asylum Programs were included in the Salaries and Expense Account request for FY 2011).

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.3 Purchases of goods & svcs. from Gov't accounts	68,308	64,755	58,646	(6,109)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2011 request reflects a decrease of \$6,109,000 related to Fee Reform (The Office of Citizenship, the SAVE Program, and the Refugee and Asylum Programs were included in the Salaries and Expense Account request for FY 2011).

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.4 Operation and maintenance of facilities	83	79	71	(8)

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2011 request reflects a decrease of \$7,000 related to Fee Reform (The Office of Citizenship, the SAVE Program, and the Refugee and Asylum Programs were included in the Salaries and Expense Account request for FY 2011).

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.7 Operation and maintenance of equipment	618	586	531	(55)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2011 request reflects a decrease of \$55,000 related to Fee Reform (The Office of Citizenship, the SAVE Program, and the Refugee and Asylum Programs were included in the Salaries and Expense Account request for FY 2011).

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.8 Other services	4	4	3	(1)

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. There is less than \$1,000 in change from FY 2010 and FY 2011.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
26.0 Supplies and materials	3,157	2,993	2,710	(283)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2011 request reflects a decrease of \$282,000 related to Fee Reform (The Office of Citizenship, the SAVE Program, and the Refugee and Asylum Programs were included in the Salaries and Expense Account request for FY 2011).

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
31.0 Equipment	12,087	11,458	10,377	(1,081)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2011 request reflects a decrease of \$1,081,000 related to Fee Reform (The Office of Citizenship, the SAVE Program, and the Refugee and Asylum Programs were included in the Salaries and Expense Account request for FY 2011).

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
32.0 Land and structures	9,386	8,898	8,058	(840)

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. The FY 2011 request reflects a decrease of \$839,000 related to Fee Reform (The Office of Citizenship, the SAVE Program, and the Refugee and Asylum Programs were included in the Salaries and Expense Account request for FY 2011).

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
42.0 Insurance Claims and Indemnity	2,956	2,802	2,538	(264)

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act. The FY 2011 request reflects a decrease of \$264,000 related to Fee Reform (The Office of Citizenship, the SAVE Program, and the Refugee and Asylum Programs were included in the Salaries and Expense Account request for FY 2011).

**H-1B Nonimmigrant Petitioner Account**

## **I. Appropriation Overview**

### **A – Mission Statement for H-1B Nonimmigrant Petitioner Account**

The H-1B Visa Reform Act of 2004 requires employers who participate in the H-1B program to pay an additional \$1,500 (\$750 for those petitioners who employ less than 25 full-time equivalent employees), in addition to the base-processing fee of \$320 to file a Petition for a Nonimmigrant Worker (Form I-129). USCIS receives five percent of these funds, as well as the entire base-processing fee. However, this account only includes funding associated with the fee stipulated in the H-1B Visa Reform Act of 2004 it does not include funding associated with the base processing fee. These funds comprise less than one percent of the total USCIS budget.

### **B – Budget Activities:**

Funding from the H-1B Nonimmigrant Petitioner Account primarily supports the Domestic Operations Directorate. Fee revenues primarily fund contract activities (mail, filing, biometric and data entry) and facility rent expenses related to the processing of immigration benefit applications at USCIS Service Centers.

Domestic Operations manages four regionally based Service Centers which receive, process, and adjudicate applications, petitions and their related fees for immigration benefits not requiring face-to-face contact with the applicant, petitioner, or beneficiary. This office also oversees the operations of USCIS document production operations at the production facility in Corbin, KY, and at two of the Regional Service Centers. The Service Centers also provide data entry and card production support for some District Office and Asylum Office workloads, as well as processing of immigrant visas for incoming immigrants.

### **C – Budget Request Summary:**

The USCIS requests \$13,000,000 in FY 2011 to maintain current service levels. These funds will continue to support contract activities and facility rent expenses for the processing of immigration benefit applications.

### III. Current Services Program Description by PPA

**Department of Homeland Security  
Citizenship & Immigration Services  
H-1B Nonimmigrant Petitioner Account  
Adjudication Services  
Program Performance Justification  
(Dollars in Thousands)**

**PPA: Adjudication Services**

	<u>Perm. Pos</u>	<u>FTE</u>	<u>Amount</u>
<b>2009 Actuals</b>	-	-	<b>12,251</b>
<b>2010 Enacted</b>	-	-	<b>13,000</b>
<b>2011 Current Services</b>	-	-	<b>13,000</b>
<b>2011 Total Request</b>	-	-	<b>13,000</b>
Total Change 2010 to 2011	-	-	-

USCIS requests \$13 million for contract activities and facility rent expenses that support the processing of immigration benefit applications. The requested amount is set by Congressional statute providing USCIS with five percent of the fees collected for the H-1B visas (Nonimmigrant Petitioner), in addition to the base-processing fee to file a Petition for a Nonimmigrant Worker (Form I-129).

**CURRENT SERVICES PROGRAM DESCRIPTION:**

USCIS Domestic Operations receives, processes, and adjudicates applications, petitions and their related fees for immigration benefits not requiring face-to-face contact with the applicant, petitioner, or beneficiary, which includes:

- *Family-based petitions* - facilitating the process for close relatives to immigrate, gain permanent residency, work, etc.
- *Employment-based petitions* - facilitating the process for current and prospective employees to immigrate or stay in the U.S. temporarily.

Domestic Operations also provides data entry and card production support for some District Office and Asylum Office workloads, as well as processing of immigrant visas for incoming immigrants.

USCIS annually processes millions of immigration benefit applications at its Service Centers. The \$13 million for contract activities and facility rent expenses is a portion of the total operations contract support and Service Center rent. The difference is covered by fees collected into the Immigration Examinations Fee Account.

In FY 2009 USCIS:

- Ensured that the mail, filing and data entry functions being performed by contractors located within the Service Centers continued uninterrupted.
- Continued funding for Service Center facility rent expenses.

In FY 2010 and 2011 USCIS plans to continue to:

- Ensure that the mail, filing and data entry functions being performed by contractors located within the Service Centers continues uninterrupted.
- Continue funding for Service Center facility rent expenses.

### PPA Mission Statement

The funds from the H-1B Nonimmigrant Petitioner Account, comprising less than one percent of the total USCIS budget request, are specifically targeted to contracting activities and facility rent expenses related to processing immigration benefit applications. These funds are the result of the H-1B Visa Reform Act of 2004, which requires employers who participate in the H-1B program to pay an additional \$1,500 (\$750 for those petitioners who employ less than 25 full-time equivalent employees), in addition to the base processing fee of \$320 to file a Petition for a Nonimmigrant Worker (Form I-129). USCIS receives five percent of these funds, as well as the entire base processing fee. However, this account only includes funding associated with the fee stipulated in the H-1B Visa Reform Act of 2004 it does not include funding associated with the base processing fee.

### Summary Justification and Explanation of Changes

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
23.1 Rental payments to GSA	2,000	2,000	2,000	-

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. This amount is a portion of the Service Center rent; the difference is covered by fees collected into the Immigration Examinations Fee Account. The FY 2011 request reflects no change.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.1 Advisory and assistance services	10,251	11,000	11,000	-

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2011 request reflects no change.

**Fraud Prevention and Detection Account**

## **I. Appropriation Overview**

### **A – Mission Statement for Fraud Prevention and Detection Account**

Funding in the Fraud Prevention and Detection Account is used for activities related to preventing and detecting fraud associated with immigration benefit applications as stipulated in the L-1 Visa Reform Act of 2004 (later amended by Public Law 109-13, Section 403). The law requires petitioners to pay \$500 toward this purpose for a beneficiary's initial grant of H-1B or L nonimmigrant classification, as well as if they are changing a beneficiary's employer within these classifications; and pay \$150 for H-2B benefit in addition to the base-processing fee for a Petition for a Nonimmigrant Worker (Form I-129). USCIS receives a one-third share of the H and L fraud fee.

### **B – Budget Activities:**

Prior to FY 2010, funding supported Fraud Detection and National Security (FDNS) efforts only related to the H-1B, H-2B, or L nonimmigrant classifications. FDNS develops, coordinates and leads national anti-fraud operations for USCIS and oversees and enhances policies and procedures pertaining to the performance of law enforcement (background) checks on applicants and petitioners.

For FY 2010 and thereafter, funding within this account can be used for fraud-related activities for all application and petition types. Language approved within the Consolidated Appropriations Act of FY 2010 (P.L. 111-117) provided USCIS with authority to use funding within this account for any fraud-related activities associated with immigration benefits. For FY 2010, USCIS is planning to use carryover funding in the H & L Fraud Fee Account (\$148 million was available at the beginning of FY 2010) to fund all of the FDNS requirements, i.e., the portion associated with H & L Fraud work as well as approximately \$72 million that would have otherwise been funded through the Immigration Examinations Fee Account. In FY 2011, USCIS may continue to fund some of the non-H & L Fraud related expenses for FDNS through this account. A determination will be made later in the fiscal year.

### **C – Budget Request Summary:**

USCIS requests 186 positions, 186 FTE, and \$38,078,000 to fund USCIS requirements for FY 2011.

Total Change 2010 to 2011	(472)	(472)	(71,781)

USCIS requests 186 positions, 186 FTE, and \$38,078,000 for this activity. The requested level covers USCIS' projected H & L visa fraud prevention and detection requirements for FY 2011.

#### **CURRENT SERVICES PROGRAM DESCRIPTION:**

FDNS has dual missions: detecting and combating fraud; and identifying threats to national security and public safety posed by those seeking immigration benefits. FDNS is an active member of the ICE-led interagency Document and Benefit Fraud Task Forces (DBFTFs) and works closely with ICE to successfully meet its missions. The cooperative work between ICE and FDNS promotes the efforts to combat H & L visa fraud more effectively and to identify and pursue solutions.

FDNS is in the process of conducting an assessment of the L-1A (multi-national executive or manager) nonimmigrant visa classifications including reviewing and analyzing data, identifying possible fraud trends and indicators, and conducting overseas verification requests.

FDNS is in the process of establishing overseas H & L anti-fraud officer positions at high volume H & L posts. Up to four officer positions will be established at overseas

locations by the end of FY 2010. Overseas staff will help develop FDNS's capacity to conduct H & L visa inquiries based upon requests for verification of information from USCIS officers.

In addition, FDNS has implemented an Administrative Site Visit and Verification Program (ASVVP). The ASVVP serves as a vehicle to conduct pre-adjudication site inspections on religious worker petitions, as well as post-adjudication compliance site inspections on H-1B visa petitions. Site inspections are a valuable tool USCIS uses to ensure that petitioners are complying with applicable laws, rules, regulations, and other authorities that govern immigration benefits.

ASVVP was developed as a result of findings disclosed by Benefit Fraud Assessments conducted by USCIS. In those assessments, which included in-person site inspections/compliance reviews of petitioning organizations, USCIS discovered a significant number of organizations/employers that did not physically exist. Of those that did exist, USCIS found a significant number where on site management and others were unaware of a petition being filed and/or the terms of employment contained in the visa petition. ASVVP will be a major element of agency fraud prevention, deterrence and abatement management, and will eventually encompass site visits for a wide range of applications and petitions.

As part of the overall joint anti-fraud strategy and in partnership with ICE, FDNS identifies vulnerabilities in the benefit fraud system and works to eliminate the potential for exploitation of those vulnerabilities and prosecute the violators. Information on trends in fraud and criminal behaviors are shared between USCIS and ICE so that both are better able to identify and prevent potential abuse of the nation's immigration system.

Recognizing the need to better focus our integrated fraud efforts, FDNS and ICE signed a new Memorandum of Agreement (MOA) discontinuing the practice of referring all suspected fraud to ICE. This MOA refines criteria for referrals to the following:

- Major fraud conspiracies
- Fraud cases involving nationals from countries designated in writing by ICE
- Corrupt attorneys and form preparers

Fraud referrals made for any of these reasons will be accepted or declined by ICE within 60 days of referral. Irrespective of ICE action, USCIS can continue administrative actions to address fraud.

#### FY 2009 Accomplishments

- Developed a proactive anti-fraud program that bounces key fraud indicators from past (proven) conspiracies against all incoming applications and petitions.
- Supported security-related initiatives and continue contractor assistance to support ongoing efforts to develop a comprehensive and collaborative approach for detecting, prosecuting, and deterring immigration-related fraud.

- Began executing ASVVP and completed approximately 6,000 site visits.
- Increased the number of government and contract personnel dedicated to gathering and analyzing referral, lead, and case data to identify fraud trends and the means by which to eliminate the fraud most effectively.
- Increased the use of private sector information services to identify fraudulent business entities. Capability was implemented to review financial and other business characteristics of organizations submitting employment-based petitions. This effort will continue into FY 2010 with approximately \$3.7 million in planned funding.

FY 2010 Planned Activities:

- Continue the use of private sector information services to include fraudulent business entities.
- Continue supporting development of a comprehensive and collaborative approach for detecting, prosecuting, and deterring immigration-related fraud.
- Continue operating the ASVVP to include a target of 20,000 site visits.
- Work with the FBI National Name Check Program (NNCP) to enhance procedures for the electronic submission of FBI name check requests as well as the electronic receipt, posting, and storage of name check results.
- Continue developing the Field Intelligence Program (FIP) by transferring initial intelligence reporting functions to the field while aligning USCIS intelligence reporting with the Department of Homeland Security Office of Intelligence & Analysis (DHSIA) standardized intelligence reporting program.

FY 2011 Planned Activities:

- Continue the use of private sector information services to include fraudulent business entities.
- Continue supporting development of a comprehensive and collaborative approach for detecting, prosecuting, and deterring immigration-related fraud.
- Work with the FBI NNCP to enhance procedures for the electronic submission of FBI name check requests as well as the electronic receipt, posting, and storage of name check results.
- Continue developing the FIP by transferring initial intelligence reporting functions to the field while aligning USCIS intelligence reporting with the DHSIA standardized intelligence reporting program.
- Conduct ASVVP site visits (targets under development) while expanding the range of application and petition types covered by site visits.

### PPA Mission Statement

The funds from the Fraud Prevention and Detection Account, comprising approximately two percent of the total USCIS budget request, primarily support the USCIS goal to ensure the security and integrity of the immigration system. These funds are specifically for activities related to preventing and detecting fraud of H & L immigration benefit applications.

## Summary Justification and Explanation of Changes

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
11.1 Total FTE & personnel compensation	13,773	61,069	16,946	(44,123)

Salaries and Benefits includes costs for 186 FTEs. The FY 2011 request includes \$307,000 for the proposed January 2011 1.4 percent increase in personnel compensation, and a decrease of \$58,343,000 in costs associated with supporting the office of Fraud Detection and National Security in FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
11.3 Other than full-time permanent	48	665	59	(606)

See description in 11.1.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
11.5 Other personnel compensation	344	894	203	(691)

See description in 11.1.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
21.0 Travel and transportation of persons	587	2,131	758	(1,373)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2011 request reflects a decrease of \$1,373,000 in costs associated with supporting the office of Fraud Detection and National Security in FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
22.0 Transportation of things	92	174	119	(55)

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2010 budget request reflects a decrease of \$55,000 in costs associated with supporting the office of Fraud Detection and National Security in FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
23.1 Rental payments to GSA	1,926	2,486	2,486	-

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2011 request reflects no change.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
23.2 Rental payments to others	-	-	-	-

Other rent includes all payments to a non-Federal source for rental space, land, and structures.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
23.3 Communications utilities and miscellaneous charges	12	226	15	(211)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2011 request reflects a decrease of \$211,000 in costs associated with supporting the office of Fraud Detection and National Security in FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
24.0 Printing and reproduction	-	16	-	(16)

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2011 request reflects a decrease of \$16,000 in costs associated with supporting the office of Fraud Detection and National Security in FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.1 Advisory and assistance services	4,875	17,324	6,292	(11,032)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2011 request reflects a decrease of \$11,031,000 in costs associated with supporting the office of Fraud Detection and National Security in FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.2 Other services	4,288	-	5,535	5,535

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2011 request reflects a decrease of \$215,000 in costs associated with supporting the office of Fraud Detection and National Security in FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.3 Purchases of goods & svcs. from Gov't accounts	50	79	65	(14)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2011 request reflects a decrease of \$14,000 in costs associated with supporting the office of Fraud Detection and National Security in FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.8 Other services	1	1	1	-

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. The FY 2011 request reflects no change from FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
26.0 Supplies and materials	135	354	174	(180)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2011 request reflects a decrease of \$180,000 in costs associated with supporting the office of Fraud Detection and National Security in FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
31.0 Equipment	325	1,069	420	(649)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2011 request reflects a decrease of \$649,000 in costs associated with supporting the office of Fraud Detection and National Security in FY 2010.

# FY 2011 PRESIDENT’S BUDGET REQUEST STRATEGIC CONTEXT

## U.S. CITIZENSHIP & IMMIGRATION SERVICES (USCIS)

### TABLE OF CONTENTS

I.	STRATEGIC CONTEXT FOR FY 2011 BUDGET	
A.	Mission and Description of Component.....	CN-1
B.	Major Programs and Key Strategic Goals.....	CN-2
C.	Resources Requested and Performance Impact.....	CN-5
D.	Performance Highlights, Resources, and Alignment to Strategic Goals.....	CN-8
E.	High Priority Performance Goals.....	CN-13
F.	Digest Tables by FYHSP Programs .....	CN-14

## A. Mission and Description of Component

United States Citizenship and Immigration Services (USCIS) is the largest immigration service in the world. USCIS processes millions of immigration benefit applications every year through a network of 230 domestic and foreign offices.

USCIS secures America's promise as a nation of immigrants by providing accurate and useful information to our customers, granting immigration and citizenship benefits, promoting an awareness and understanding of citizenship, and ensuring the integrity of the immigration system.

USCIS has established six goals in support of its mission:

- Strengthen the security and integrity of the immigration system,
- Provide effective customer-oriented immigration benefits and information,
- Support immigrants' integration and participation in American civic culture,
- Promote flexible and sound immigration policies and programs,
- Strengthen the infrastructure supporting the USCIS mission, and
- Operate as a high-performance organization that promotes a highly talented workforce and a dynamic work culture.

USCIS ensures that citizenship and immigration information and decisions on immigration benefits are provided to customers in a timely, accurate, consistent, courteous, and professional manner. Over fifty different types of immigration benefits are processed through USCIS. Every case is unique and requires specialized attention from experienced USCIS immigration officers. USCIS is also responsible for strengthening the effectiveness of national security efforts through enhancing the integrity of our country's legal immigration system. It accomplishes this by deterring, detecting, and pursuing immigration related fraud and combating unauthorized employment in the workplace. In addition, USCIS provides protection to refugees, both inside and outside of the United States, in accordance with USCIS' laws and international obligations.

Every day, on average, USCIS:

- Processes 27,400 applications for immigration benefits
- Issues 7,200 Permanent Resident Cards (green cards)
- Adjudicates 175 asylum applications
- Naturalizes 2,900 new civilian citizens, and 35 new citizens who are members of the United States Armed Forces
- Conducts 135,000 national security background checks
- Captures 8,700 sets of fingerprints at 129 Application Support Centers
- Answers approximately 1,200 phone inquiries and assists approximately 8,500 customers at our 87 local offices

## B. Major Activities and Key Strategic Goals

USCIS activities are organized into five program areas:

- Immigration Status Verification
- Adjudication Services
- Citizenship
- Immigration Security and Integrity
- Information and Customer Services

### Immigration Status Verification

The Immigration Status Verification program area encompasses: the E-Verify program, Systematic Alien Verification for Entitlements program (SAVE), and the REAL ID Act programs. The program performance goal for these activities is to provide efficient and accurate immigration status and employment eligibility information, which supports the DHS Secretary's Priority of Enforcing and Administering our Immigration Laws

- E-Verify is a Web-based system that helps U.S. employers maintain a legal workforce by electronically verifying the employment eligibility of newly hired employees. USCIS administers E-Verify in partnership with the Social Security Administration.
- SAVE is an intergovernmental information-sharing initiative designed to aid eligibility workers in determining a noncitizen applicant's immigrant status. It accomplishes this by providing immigration status information and ensuring that only entitled noncitizen applicants receive federal, state, or local public benefits and licenses.
- REAL ID is a nationwide effort intended to prevent terrorism, reduce fraud, and improve the reliability and accuracy of identification documents that State governments issue. The REAL ID Act requires that a state must first verify the issuance, validity, and completeness of each document required before it can issue a REAL ID-compliant driver's license or identification card to applicants.

These programs are supported by the Verification Information System (VIS). VIS can currently handle up to 65 million queries per year, with anticipated growth in employer registration and query volume, VIS capacity was increased in FY 2009 to accommodate up to 65 million queries per year; and the system will be transitioned to the new DHS data center in FY 2010.

### Adjudication Services

The Adjudication Services program area is divided into three sub-programs: Adjudication Services; Asylum, Refugee and International Operations; and, Business Transformation. The program performance goal for these activities is to provide immigration benefit services in a timely, consistent, and accurate manner, which supports the DHS Secretary's Priority of Enforcing and Administering our Immigration Laws

- Adjudication Services encompasses functions, operations, policies and activities related to the processing and decisions on immigration applications and benefits.
- Asylum, Refugee, and International Operations is responsible for overseeing, planning, and implementing policies and activities related to asylum and refugee issues as well as immigration services overseas.

- Business Transformation is a multi-year effort to modernize USCIS business processes and supporting systems. Funding is provided primarily through premium processing revenues.

The Adjudication Services program is working to eliminate the backlog of Naturalization (N-400) Applications and reduce the estimated average cycle time for processing the following:

- Form N-400 (Application for Naturalization) – 5 months in all offices
- Form I-485 (Application to Register for Permanent Residence or to Adjust Status ) – 4 months in all offices
- Form I-140 (Immigrant petition for Alien Worker) – 4 months in all offices

The Asylum, Refugee, and International Operations program is working to award a multi-source contract for interpreter services, and once finalized, will implement a rule regarding professional interpreters at affirmative asylum interviews. The program is also working with refugee partners to examine ways to capture and screen fingerprints prior to refugee status determination interviews at certain processing locations.

### Citizenship

The Citizenship program area primarily encompasses the activities under the USCIS Office of Citizenship (OoC). The program performance goal is to promote education and training on fundamental civic principles and the rights and responsibilities of citizenship, provide federal leadership and support collaboration on civic integration issues, and celebrate the meaning of citizenship. This goal supports the DHS Secretary's Priority of Enforcing and Administering our Immigration Laws. OoC develops educational products and information resources to foster immigrant integration and participation in American civic culture and enhances training to promote an understanding of and appreciation for U.S. civic principles.

Current activities under the Citizenship program include expanding existing adult educator training programs and providing technical assistance on the naturalization test curriculum for classroom study tools. The new naturalization test will be fully implemented by FY 2010.

### Immigration Security and Integrity

The Immigration Security and Integrity program area encompasses activities under Fraud Detection and National Security and domestic operations offices. The program performance goal for this program area is to enhance the security and integrity of the legal immigration system, which supports the DHS Secretary's Priority of Enforcing and Administering our Immigration Laws. Activities primarily include detecting, pursuing, and deterring fraud; ensuring law enforcement (background) checks are conducted on all persons seeking benefits; identifying systemic vulnerabilities and other weaknesses that compromise the integrity of the immigration system; performing as USCIS' primary conduit to and from the law enforcement and intelligence communities; and coordinating interagency policies, procedures, and other issues with Customs and Border Protection (CBP) and Immigration and Customs Enforcement (ICE).

### Information and Customer Services

The Information and Customer Services program area encompasses information and customer service functions, operations, policies and activities, and customer service call center operations. The program performance goal for this program area is to provide timely, consistent, and accurate information to our customers, which supports the DHS Secretary's Priority of Enforcing and Administering our Immigration Laws.

Through the Information and Customer Services Program, USCIS reduces the frequency of repeated, redundant applicant contact with USCIS employees, thus improving agency efficiency. USCIS makes it easier for our customers to get the information they need, when they need it through multiple channels of available assistance, including the USCIS website, toll-free call centers (National Customer Service Call Centers), and face-to-face appointments.

Current activities include implementing a revised notice printing process, and expanding the Service Request Management Tool (SRMT) functionality to include customer self service. In FY 2010, USCIS plans to pilot modified kiosk access to USCIS web services through local USCIS offices.

### C. Resources Requested and Performance Impact

USCIS requests a total of 10,878 FTEs and \$2.8 billion.

#### Immigration Status Verification

The FY 2011 budget request includes 522 FTEs and \$137.4 million for Immigration Status Verification.

Through the activities of E-Verify, SAVE and REAL ID, the Immigration Status Verification program is leading initiatives to:

- Increase outreach and training assistance to local, state and federal agencies to encourage use of E-Verify and SAVE.
- Improve system data sources to safeguard privacy information, minimize identity theft and fraud, and ensure accountability and compliance.
- Promote partnership with Departments of Motor Vehicles to facilitate sharing of photos and records with E-Verify and accomplish REAL ID verification needs.

As of January 2010, E-Verify has enrolled over 183,931 employers, representing over 680,000 locations. Employers have run over 8.7 million queries in fiscal year (FY) 2009 to date, and the volume of queries doubled from FY 2007 to FY 2008 from 3.27 million to 6.6 million. According to an analysis of Bureau of Labor Statistics data, over 17.3% percent of all non-agricultural new hires in the U.S are run through E-Verify.

As of January 2010, the SAVE program has a total of 347 registered agencies. This includes 185 state agencies, 36 Department of Motor Vehicle (DMV) organizations, 98 local agencies, and 28 federal agencies. Through December 31, 2009, there were 2.6 million SAVE queries run through the system.

In FY 2010 and FY 2011, E-Verify will enhance systems to improve compliance and monitoring, and continue marketing activities. USCIS will also continue working to reduce SAVE secondary verifications through technological enhancements to the Verification Information System (VIS) and improvements to the database's accuracy.

Working with the DHS Office of Policy, USCIS is facilitating state compliance with the REAL ID Act through its verification systems. The SAVE program has partnered with the American

Association of Motor Vehicle Administrators (AAMVA) on the development of a national connectivity effort to help States verify data with each other and against Federal databases. The AAMVA connectivity allows DMVs another avenue to connect to the SAVE program and facilitate REAL ID requirements.

### Adjudication Services

The FY 2011 budget request includes 9,324 FTEs and \$2.3 billion.

In FY 2010, under the Adjudication Services program, USCIS:

- Initiated the Administrative Site Visit and Verification Program (ASVVP) and completed 4,861 site visits.
- Began to expand FDNS Operations overseas, starting with two Fraud Fee Account funded Immigration Officer positions in Monterrey, Mexico and Frankfurt, Germany.
- Transformation in coordination with OIT secured Level III Federal Enterprise Architecture (FEA) compliance with the USCIS Enterprise Architecture.
- Completed 110,000 refugee determination interviews to support 75,000 refugee admissions to the United States.
- Implemented a comprehensive refugee standard operating procedure and expanded and improved capacity to capture and check biometrics for applicants for refugee resettlement.
- Achieved a six-month cycle time measured in real time for affirmative asylum.
- Completed more than 33,000 asylum applications resulting in 5,881 cases pending – an historic low.

In FY 2010 and 2011, the Adjudication Services program plans to maintain the reduced estimated average cycle times achieved in FY 2010. The Asylum, Refugee, and International Operations program plans to assess fraud detection and national security resource needs both at headquarters and overseas refugee processing circuit rides. The establishment of a case management system will provide overseas offices with ready access to International Operations documents.

In FY 2010, USCIS plans to begin development of the first increment of Transformation, which will cover non-immigrant applications and the associated releases. The increment is anticipated to be completed prior to the end of FY 2012. Release A is the first release in the increment and will establish account management for individuals and provide end-to-end electronic case management functionality for a select set of primarily Non-Immigrant benefit types. Release B is the final release in the first increment and will establish account management for organizations and provide end-to-end electronic case management functionality for the remaining Non-Immigrant benefit types.

### Citizenship

The FY 2011 budget request includes 23 FTEs and \$18 million.

In FY 2009, USCIS led over a dozen outreach events to promote citizenship and civic integration initiatives. USCIS also launched a public service campaign to promote volunteerism and the New Americans Project by producing foreign language broadcast announcements to reach a combined circulation of eight million individuals. Educational efforts included hosting training conferences

and workshops for volunteers and adult educators on the revised naturalization test, techniques for teaching civics and citizenship, and the naturalization process in general. To date, USCIS has trained more than 2,000 individuals in over 25 conferences and workshops nationwide.

USCIS provides a valuable role in coordinating federal integration efforts and raising awareness of the importance of integration and citizenship among all sectors of society. Key to the success of this program are partnerships with state and local governments, U.S. businesses, non-profits, faith-based organizations, and academia, as all have important roles to play in improving integration. Resources provided in FY 2010, and FY 2011 will continue support for outreach to immigrant communities, training conferences around the country, and coordination with a variety of organizations and groups to encourage integration and civic engagement. OoC will administer and manage programmatic aspects of the new Citizenship Grant Program, monitor the administration of the new naturalization test, and evaluate educational publications and outreach resources.

#### *Immigration Security and Integrity*

The FY 2011 budget request includes 667 FTEs and \$261 million to operate a program of comprehensive quality assurance and security measures to ensure that benefits are granted only to eligible individuals.

FDNS has completed a Benefit Fraud and Compliance Assessment (BFCA) for the H-1B (specialty occupation) benefit category and is in the process of conducting an assessment of the L-1A (multi-national executive or manager) nonimmigrant visa classifications. In addition, FDNS is in the process of establishing overseas Anti-fraud Officer positions to focus on H and L visas at 8 posts with high volume of applicants.

In FY 2010 and FY 2011, USCIS will continue using funding to further ongoing efforts to develop a comprehensive and collaborative approach for detecting, prosecuting, and deterring immigration-related fraud. This includes developing a proactive anti-fraud program that bounces key fraud indicators from past (proven) conspiracies against all incoming applications and petitions; and conducting post adjudication compliance site visits through the Administrative Site Visit Verification Program (ASVVP).

#### *Information and Customer Services*

The FY 2011 budget request includes 341 FTEs and \$115 million.

In FY 2010 and FY 2011, USCIS will continue using funding to advance self-service through improved on-line scripts, continue enhancements with the automated appointment scheduler, further develop SRMT on-line for external customer use, and enhance call center efficiencies and improve customer service with the implementation of Computer Telephone Integration (CTI).

D. Performance Highlights, Resources, and Alignment to Strategic Goals

For each mission-oriented program, the program performance goal, alignment to the DHS Secretary’s Priorities total dollars and FTE, and Government Performance and Results Act (GPRA) performance plan measures are shown below. Additional measures are also displayed, as appropriate, to provide a more thorough context of expected performance results.

<b>Program: Immigration Status Verification</b>						
<b>Performance Goal:</b> Provide efficient and accurate immigration status and employment eligibility information.						
<b>Secretary’s Priority</b> Enforcing and Administering Our Immigration Laws.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	\$20,500	\$143,000	\$78,504	\$168,818	\$156,184	\$137,400
<b>FTE</b>	174	365	437	289	482	522

Performance Plan Measures

<b>Measure:</b> Percent of E - Verify queries in comparison to annual hires recorded by the Bureau of Labor Statistics.						
<b>Description of Measure:</b> E - Verify provides an automated link to federal databases to help employers who have voluntarily decided to determine if a new hire is legally authorized to work in the United States. This measure assesses the use of the E - Verify program by comparing the number of E - Verify queries to annual hires recorded by the Bureau of Labor Statistics. It is calculated by excluding agricultural workers and assumes a 10% duplicate and invalid query percentage, which is also excluded.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	11%	13%	13%
<b>Actual:</b>	None	None	None	17.3%	N/A	N/A

<b>Measure:</b> Percent of Systematic Alien Verification for Entitlements (SAVE) queries requiring manual review that are later resolved as lawful status.						
<b>Description of Measure:</b> This measure reflects the percent of Systematic Alien Verification for Entitlements (SAVE) queries on the immigration status of government - benefit applicants that require manual review to determine lawful status. When SAVE is used by government agencies to check the immigration status of an applicant for a government - issued license or benefit, immediate confirmation is usually received. If the records retrieved from the SAVE query are inconclusive, manual review is required. The percent of manual reviews that find an applicant has lawful immigration status is a reflection of the effectiveness of SAVE automation and the quality and completeness of records; a low percentage indicates effective automation and records.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	15%	12%	<=3%	<=9%	<=9%
<b>Actual:</b>	None	5%	5%	5%	N/A	N/A

<b>Program: Adjudication Services</b>						
<b>Performance Goal:</b> Provide immigration benefit services in a timely, consistent, and accurate manner.						
<b>Secretary's Priority:</b> Enforcing and Administering Our Immigration Laws.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	\$1,271,196	\$1,485,272	\$1,979,076	\$2,022,511	\$2,215,475	\$2,256,990
<b>FTE</b>	6,403	7,695	7,795	8,444	8,853	9,324

**Performance Plan Measures**

<b>Measure:</b> Estimated average cycle time to process form I - 129 (Petition for Nonimmigrant Worker).						
<b>Description of Measure:</b> An I-129, Petition for Nonimmigrant Worker, is filed by an employer to petition for an alien to come to the U.S. temporarily as a nonimmigrant worker. This measure assesses the program's effectiveness in processing the I-129 to provide immigration benefit services in a timely manner.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	<=2 months	<=2 months	<=2 months	<=2 months	<=2 months	<=2 months
<b>Actual:</b>	2 months	1.9 months	1.9 months	1.3 months	N/A	N/A

<b>Measure:</b> Estimated average cycle time to process form I-485 (Application to Register for Permanent Residence or to Adjust Status).						
<b>Description of Measure:</b> An I-485, Application to Register for Permanent Residence or to Adjust Status, is filed by an individual to apply for permanent residence in the United States or to adjust their current status. This measure assesses the program's effectiveness in processing complete I-485 to provide immigration benefit services in a timely manner, which exclude categories such as those applications in which no visa number is available or other data is pending.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	<=6 months	<=6 months	<=4 months	<=4 months	<=4 months	<=4 months
<b>Actual:</b>	5.93 months	5.2 months	13.6 months	4.4 months	N/A	N/A

<b>Measure:</b> Estimated average cycle time to process form N-400 (Application for Naturalization).						
<b>Description of Measure:</b> An N-400, Application for Naturalization, is filed by an individual applying to become a United States citizen. This measure assesses the program's effectiveness in processing N-400 applications, while controlling for a number of external factors that can affect the timeline.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	<=6 months	<=7 months	<=5 months	<=5 months	<=5 months	<=5 months
<b>Actual:</b>	5.58 months	6.2 months	8.7 months	4.2 months	N/A	N/A

<b>Measure:</b> Level of decisional accuracy for Form I-485, Application to Register for Permanent Residence or to Adjust Status.						
<b>Description of Measure:</b> An I-485, Application to Register for Permanent Residence or to Adjust Status, is filed by an individual to apply for permanent residence in the United States or to adjust their current status. The U.S. Citizenship and Immigration Services (USCIS) conducts quality reviews on a quarterly basis to determine the accuracy rate of final adjudication decisions. Quality reviews are conducted using a team of experienced adjudicators and subject matter experts. This measure assesses the program's ability to process the I-485 to provide immigration benefit services in a complete (fully supportable) and accurate manner. Additionally, the results of this quality review process are used to improve the training of adjudicators and the processes used in conducting adjudications.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	None	94%	94%
<b>Actual:</b>	None	None	None	None	N/A	N/A

<b>Measure:</b> Level of decisional accuracy for Form N-400, Application for Naturalization.						
<b>Description of Measure:</b> A N-400, Application for Naturalization, is filed by an individual applying to become a United States citizen. The U.S. Citizenship and Immigration Services (USCIS) conducts quality reviews on a quarterly basis to determine the accuracy rate of final adjudication decisions. Quality reviews are conducted using a team of experienced adjudicators and subject matter experts. This measure assesses the program's ability to process the N - 400 to provide immigration benefit services in a complete (fully supportable) and accurate manner. Additionally, the results of this quality review process are used to improve the training of adjudicators and the processes used in conducting adjudications.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	None	98%	98%
<b>Actual:</b>	None	None	None	None	N/A	N/A

<b>Measure:</b> Percent of ineligible asylum applicants (at local offices) referred to an immigration court within 60 days.						
<b>Description of Measure:</b> Since asylum reform, work authorization is obtained only if asylum is granted or no negative decision has been made within 180 days. If the program finds an applicant ineligible for asylum and the applicant is not in valid/legal status, the program refers the application to an immigration judge for final determination in the course of removal proceedings. Immigration courts require approximately 120 days to complete adjudications. To meet the 180-day threshold for a decision, the program aims to refer 75% of ineligible applications to immigration courts within 60 days of filing. The Asylum Division recognizes that some cases should be exempt from timeliness goals due to their complexity, the need to coordinate the adjudication with other USCIS or DHS entities, or the unavailability of staff at certain times. In order to balance timely completions and quality adjudications, the program has exempted 25 percent of its workload from this requirement.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011

**Performance Plan Measures**

<b>Measure:</b> Number of Citizenship training sessions conducted.						
<b>Description of Measure:</b> This measure reflects the trainings conducted to support immigrant integration through improved civics and citizenship instruction. The objective of these training workshops and conferences is for adult English as a Second Language (ESL), civics and citizenship teachers, volunteers, immigrant-serving organizations and other organizations to enhance their skills in teaching U.S. history, civics, and the naturalization process to immigrants. These structured training opportunities have a set curriculum which focuses on the naturalization test, the naturalization process, an overview of the fundamental principles of American democracy, and the skills and knowledge necessary for success in the naturalization interview process. These workshops complement EL/Civics Online, a web-based electronic training module for volunteers and adult educators that includes courses and materials in the following areas: the U.S. naturalization process, U.S. government, U.S. history, and civic engagement.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	None	12	13
<b>Actual:</b>	None	None	None	None	N/A	N/A

<b>Measure:</b> Number of significant citizenship outreach events.						
<b>Description of Measure:</b> This measure describes the number of significant outreach events designed to support immigrant integration. These actions serve a multitude of purposes to assist in accomplishing this goal, such as educating immigrants and encouraging their civic integration, informing stakeholders about the Offices mission and the importance of promoting civic integration, educating counterparts from outside the U.S. government about Federal integration efforts, and bringing on new partners to help encourage integration. Significant outreach events include conferences, ceremonies, meetings, media appearances, trainings, and presentations. Outreach efforts encourage immigrants to become more integrated into American civic culture.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011

### Performance Plan Measures

<b>Measure:</b> Percent of routine referrals with national security implications completed within targeted processing time.						
<b>Description of Measure:</b> This measure reflects the percent of routine requests for technical support on National Security cases or concerns that are responded to within 2 business days. Requests received from the field, counsel, etc. are received and recorded by the Field Support unit (FSU) in the National Security Branch (NSB). Requests are normally received by mail, but may also be received by phone.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	80%	85%	90%
<b>Actual:</b>	None	None	None	80%	N/A	N/A

<b>Measure:</b> Percent of site visits that verify information provided in petition is in compliance with immigration laws.						
<b>Description of Measure:</b> This measure gauges the percentage of site visits that result in verifying the veracity of information provided on a petition and in its supporting documentation. The primary objective of these site visits is to verify the physical existence of the religious organization or business, on - site familiarity with the petition (job offer), and other critical (eligibility - based) factors that will assist immigration service officers in rendering the appropriate adjudicative decision or deciding whether to initiate revocation proceedings.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011

<b>FTE</b>	914	1,139	1,153	289	341	341

**Performance Plan Measures**

<b>Measure:</b> Average time to reach a telephone Customer Service Representative.						
<b>Description of Measure:</b> When a customer calls the U.S. Citizenship and Immigration Services (USCIS) Customer Service Center, they are connected to a telephone customer service representative. This measure assesses the time it takes for a customer to make initial contact.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	<2 minutes	<1 minute	<1 minute	<1 minute
<b>Actual:</b>	None	None	.65 minutes	6 seconds	N/A	N/A

<b>Measure:</b> Average time to reach a telephone Immigration Information Officer.						
<b>Description of Measure:</b> When a customer calls the U.S. Citizenship and Immigration Services (USCIS) Customer Service Center, they are connected to a telephone customer service representative. If the customer's question is complex, they are referred to a USCIS telephone Immigration Information Officer. This measure assesses the time it takes for a customer to make initial contact with a telephone Immigration Information Officer.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	<5 minutes	<5 minutes	<2 minutes	<2 minutes
<b>Actual:</b>	None	None	5.43 minutes	48 seconds	N/A	N/A

<b>Measure:</b> Customer satisfaction rate with US Citizenship and Immigration Services phone centers.						
<b>Description of Measure:</b> This measure reports the percent of people who were satisfied with the information obtained on immigration services and benefits from United States Citizenship and Immigration Services (USCIS) over the telephone., A USCIS contractor selects a random group of customers who have called the phone centers on a monthly basis to participate in a phone survey to rate their overall experience with the service received from the USCIS phone center. A standardized USCIS and General Accountability Office approved survey tool is used to collect customer responses. This satisfaction rate measures our performance in providing timely, consistent, and accurate information regarding immigration services and benefits to immigrants, U.S. employers, and the American public over the telephone.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	79%	79%	80%	82%	86%	86%
<b>Actual:</b>	83%	82%	84.2%	86%	N/A	N/A

E. High Priority Performance Goals

**High Priority Performance Goal (Secretary’s Priority Area): Enforcing and Administering our Immigration Laws**

Goal: Improve the delivery of immigration services.

The process for adjudicating immigration applications remains a paper-based and transaction focused process, creating challenges for DHS and its customers. The Department's current set of businesses practices have resulted in difficulties with application wait times, as well as challenges with tracking applicants. The current technology in place also lacks the ability for applicants to monitor their own application process.

USCIS is carrying out an enterprise wide transformation to move from a form driven, paper-based system into a centralized, electronic adjudication system. This new environment will use transformed business processes and technology to integrate information used for analysis, improve data integrity, reinforce decision consistency, and further enhance the security of the immigration system while better enabling customers to conduct business with USCIS High Priority Performance Goal Measures:

<b>Component</b>	<b>FYHSP Program Name</b>	<b>Program Performance Goal</b>	<b>Performance Measure</b>	<b>Secretary’s Priority</b>
USCIS	Adjudication Services	Provide immigration benefit services in a timely, consistent, and accurate manner	<b>Percent of Project Milestones Completed within 10 percent of cost and schedule baseline</b>	Enforcing and Administering our Immigration Laws
USCIS	Adjudication Services	Provide immigration benefit services in a timely, consistent, and accurate manner	<b>Percent of documents available in electronic format</b>	Enforcing and Administering our Immigration Laws

<b>BUDGET REQUEST AND SUPPORTING INFORMATION</b>
--

**Salaries and Expenses:**

## **I. Appropriation Overview**

### **A – Mission Statement for Salaries and Expenses:**

We train those who protect our homeland.

### **B – Budget Activities:**

The Federal Law Enforcement Training Center (FLETC) is the leading service provider for federal law enforcement training. FLETC serves as an interagency law enforcement training organization for over 85 Federal agencies with personnel located throughout the United States and its territories. FLETC's personnel conduct instructional programs for basic law enforcement recruits and some advanced training based on agency requests. FLETC also provides the necessary facilities, equipment, and support services for conducting advanced, specialized and refresher training for federal law enforcement personnel.

FLETC provides services to state, local, international and other federal law enforcement agencies with related law enforcement missions on a space-available basis. FLETC also provides export training conducted at other locations when the programs being conducted do not require the use of certain specialized facilities and when a geographical concentration of personnel is identified.

Consolidation of law enforcement training permits the Federal Government to cost-effectively emphasize training program excellence and shared experiences in cooperative training. Professional instruction and practical application provide students with the skills and knowledge necessary to meet the demanding challenges of a federal law enforcement career. New federal hires and journey level personnel learn not only the responsibilities of a law enforcement officer and agent, but through interaction with students from many other agencies, they also become acquainted with the missions and duties of their colleagues. This interaction provides the foundation for a more cooperative federal law enforcement effort.

FLETC's Partner Organizations have considerable input regarding training issues as well as operational and functional aspects of the Center. Representatives from these agencies take part in regular curriculum review and development conferences, and participate in the development of FLETC policies and directives. This relationship is characteristic of a "true partnership", which is responsive to the training mission.

**C – Budget Request Summary:**

The President’s Budget requests 1,130 positions, 1,103 FTE and \$239,919,000. The total adjustments-to-base is 0 positions, 0 FTE and \$563,000. There are no program changes.

## II. Summary of FY 2011 Budget Estimates by Program/Project Activity (PPA)

### III. Current Services Program Description by PPA

**Department of Homeland Security  
Federal Law Enforcement Training Center  
Salaries and Expenses:  
Management and Administration  
Program Performance Justification  
(Dollars in Thousands)**

**PPA: Management and Administration**

	<u>Perm. Pos</u>	<u>FTE</u>	<u>Amount</u>
<b>2009 Actuals</b>	-	-	-
<b>2010 Enacted</b>	-	-	-
2011 Adjustments-to-Base	230	224	30,000
<b>2011 Current Services</b>	<b>230</b>	<b>224</b>	<b>30,000</b>
<b>2011 Total Request</b>	<b>230</b>	<b>224</b>	<b>30,000</b>
Total Change 2010 to 2011	230	224	30,000

FLETC requests \$30.000 million for this activity. Base increase of \$30.000 million includes a realignment of \$29.603 million from the Law Enforcement Training PPA, an increase of \$0.269 million for pay inflation, and an increase of \$0.128 million for annualization.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Management and Administration: Management and Administration provides critical management, oversight, analysis, policy, and administrative support to ensure the FLETC mission of training those who protect our homeland is done efficiently and effectively. Included are activities which are administrative and non-operational in nature. Excluded are operational activities which relate to the delivery of Law Enforcement Training. Also excluded are activities which are traditionally considered administrative in nature but the preponderance of the support is directly related to the delivery of Law Enforcement Training.

The Management and Administration program includes the FLETC Director, Director's Office, and immediate staff including the Office of Chief Counsel, Washington Office, Public Affairs Office, Equal Employment Opportunity Division, and Inspection and Compliance Division. Also included is the Chief Financial Officer Directorate, providing

budget, finance, accounting, financial systems, financial statements, relocation, travel, and strategic planning functions.

The Management and Administration program also includes Asset Management functions, such as Procurement, Real and Personal Property Management, Environmental Compliance and Safety. It includes the Operation Support functions such as Human Capital and Critical Incident Stress Management to promote fairness, consistency, and efficiency in the utilization of staffing, scheduling, human capital and human resources.

Excluded from this program are direct training functions such as the Training Directorate, Office of Training Operations, Field Training Directorate, Office of State and Local Training, Training Innovation and Management, Office of Training Management, and Office of Training Support. Also excluded from this program are the Chief Information Officer and Facilities Management because the preponderance of facilities and Information Technology equipment at FLETC are in the training environment. These activities are not administrative in nature and more directly tie to the Law Enforcement Training Program.

<b>2011 Total Request</b>	<b>893</b>	<b>872</b>	<b>208,500</b>
Total Change 2010 to 2011	(230)	(224)	(29,547)

The President’s Budget requests \$208.500 million for this activity. Base decrease of \$29.547 million includes: an increase of \$1.034 million for pay inflation, an increase of \$0.493 million for annualization, an increase of \$4.000 million for the transfer of the National Computer Forensics Institute, a decrease of \$1.274 million for management efficiencies, a decrease of \$0.097 million realignment to FLETA, a decrease of \$29.603 million realignment to Management and Administration, and a one-time cost decrease of \$4.100 million for TRAIN21. There are no program changes.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Law Enforcement Training:** FLETC’s services to its three major client groups underscore its homeland security support mission in promoting intergovernmental cooperation in law enforcement preparedness.

*Federal* – FLETC provides law enforcement training to over 85 federal agencies having enforcement responsibilities. FLETC prepares new and experienced law enforcement professionals to fulfill their responsibilities in a safe manner and at the highest level of proficiency. The average basic student spends 12 weeks training at FLETC, and receives a combination of classroom instruction and hands-on practical exercise training in all phases of law enforcement from firearms and high-speed vehicle operations to legal case instructions and defendant interview techniques. Students must apply their classroom knowledge during exercises that simulate typical situations encountered on the job. To add realism these exercises often involve contract role players who act as victims, witnesses, or suspects. Each of the basic programs provides core knowledge essential for new federal officers or agents to carry out their duties in a safe and efficient manner.

In addition to basic training, FLETC offers advanced and specialized training for career-long law enforcement preparation in subjects that are common to two or more of its Partner Organizations. Examples include Antiterrorism Port Security Boat Operations, Cyber Counterterrorism Investigator Training, Covert Electronics Surveillance, Critical Infrastructure Protection, Financial Forensics Techniques, Intelligence Analysts Training, and Land Transportation Antiterrorism Training.

*State and local* – The National Center for State and Local Law Enforcement Training trains personnel from state and local law enforcement agencies in advanced topics designed to develop specialized law enforcement skills. The participants benefit from federal expertise, specialized training, and receive instruction specific to their needs. Additionally, the program offerings are in subjects not generally available from state and local police academies or colleges and universities.

*International* – In the interest of combating global crime and protecting U.S. interests abroad, FLETC offers a range of training programs to foreign law enforcement agencies. Training focuses on the U.S. Government's Law and Democracy Program and the International Law Enforcement Academy programs in Europe, Asia, Africa, and other regions in the world. In cooperation with the Department of State, FLETC manages two International Law Enforcement Academies: Gaborone, Botswana and San Salvador, El Salvador, and serves as Deputy Director at the International Law Enforcement Academy in Bangkok, Thailand. Additionally, FLETC provides training and technical assistance at locations worldwide in collaboration with and support of the respective U.S. Embassies abroad. In support of this program, FLETC recently assigned a Regional Training Advisor to the U.S. Embassy in Kyiv, Ukraine on a reimbursable basis.

The FY11 Request includes a \$1,274,000 reduction for management efficiencies, of which \$200,000 is for implementation of SAVE Award submission for travel savings and cost avoidance through increased use of video-teleconferencing and phone-conferencing. The remainder of the management efficiency will be met through more effective utilization of supplies, equipment, and fiscal resources.

<b>2011 Total Request</b>	<b>7</b>	<b>7</b>	<b>1,419</b>
Total Change 2010 to 2011	-	-	110

FLETC requests \$1.419 million for this activity. Base increase of \$0.110 million includes an increase of \$0.009 million for pay inflation, an increase of \$0.004 million annualization, and an increase of \$0.097 realignment from the Law Enforcement Training PPA.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Accreditation:** The Federal Law Enforcement Accreditation (FLETA) process sets the standards for Federal law enforcement training. The accreditation of a federal law enforcement academy or program provides assurance to the citizens they serve that they have voluntarily submitted to a process of self-regulation; and, that they have successfully achieved compliance with a set of standards that have been collectively established by their peers within their professional community that demonstrate their adherence to quality, effectiveness, and integrity. To accomplish this goal, trainers in the same discipline, working through a professional accrediting body, assist each other in evaluating and improving their professionalism. The focus of the effort is to accredit federal academies; entry-level and advanced or specialized training programs; instructor training; and other programs that affect multiple Federal, state, and local law enforcement officers.

#### IV. Program Justification Changes

Not Applicable.

## V. Exhibits and Other Supporting Materials

### A. Justification of Proposed Legislative Language

**Department of Homeland Security  
Federal Law Enforcement Training Center  
Justification of Proposed Changes in Salaries and Expenses  
Appropriation Language**

For necessary expenses of the Federal Law Enforcement Training Center, including materials and support costs of Federal law enforcement basic training; the purchase of not to exceed 117 vehicles for police-type use and hire of passenger motor vehicles; expenses for student athletic and related activities; the conduct of and participation in firearms matches and presentation of awards; public awareness and enhancement of community support of law enforcement training; room and board for student interns; a flat monthly reimbursement to employees authorized to use personal mobile phones for official duties; and services as authorized by section 3109 of title 5, United States Code; [\$239,356,000] \$238,500,000, of which up to [\$47,751,000] \$48,420,000 shall remain available until September 30, [2011] 2012, for materials and support costs of Federal law enforcement basic training; [of which \$300,000 shall remain available until expended for Federal law enforcement agencies participating in training accreditation, to be distributed as determined by the Federal Law Enforcement Training Center for the needs of participating agencies;] and of which not to exceed \$12,000 shall be for official reception and representation expenses: *Provided*, That the Center is authorized to obligate funds in anticipation of reimbursements from agencies receiving training sponsored by the Center, except that total obligations at the end of the fiscal year shall not exceed total budgetary resources available at the end of the fiscal year: *Provided further*, That section 1202(a) of Public Law 107-206 (42 U.S.C. 3771 note), as amended by Public Law [110-329 (121 Stat. 3677)] 111-83 (123 Stat. 2166), is further amended by striking "December 31, [2011] 2012" and inserting "December 31, [2012] 2013": *Provided further*, That the Federal Law Enforcement Training Accreditation Board, including representatives from the Federal law enforcement community and non-Federal accreditation experts involved in law enforcement training, shall lead the Federal law enforcement training accreditation process to continue the implementation of measuring and assessing the quality and effectiveness of Federal law enforcement training programs, facilities, and instructors]: *Provided further*, That the Director of the Federal Law Enforcement Training Center shall schedule basic or advanced law enforcement training, or both, at all four training facilities under the control of the Federal Law Enforcement Training Center to ensure that such training facilities are operated at the highest capacity throughout the fiscal year. (*Department of Homeland Security Appropriations Act, 2010.*)

**For the additional amount, for necessary expenses funding Federal Law Enforcement Training Accreditation activities, \$1,419,000, of which \$300,000 shall remain available until expended to be distributed to Federal law enforcement agencies for expenses incurred participating in training accreditation: Provided, That the Federal Law**

**Enforcement Training Accreditation Board, including representatives from the Federal law enforcement community and non-Federal accreditation experts involved in law enforcement training, shall lead the Federal law enforcement training accreditation process to continue the implementation of measuring and assessing the quality and effectiveness of Federal law enforcement training programs, facilities, and instructors.**

**Explanation of Changes:**

Request modification of FLETC S&E Appropriation language to create greater distinction of the FLETA portion of this account.

Extension of Public Law 107-206 as amended by Public Law 110-329 (relating to FLETC's authority to hire federal annuitants) until December 31, 2013 is requested at this time.

<b>BUDGET REQUEST AND SUPPORTING INFORMATION</b>
--

**Acquisition, Construction, Improvements & Related Expenses:**

## **I. Appropriation Overview**

### **A – Mission Statement for Acquisition, Construction, Improvements & Related Expenses:**

We train those who protect our homeland.

### **B – Budget Activities:**

The Federal Law Enforcement Training Center (FLETC) is the leading service provider for federal law enforcement training. FLETC serves as an interagency law enforcement training organization for over 85 Federal agencies with personnel located throughout the United States and its territories. FLETC's personnel conduct instructional programs for basic law enforcement recruits and some advanced training based on agency requests. FLETC also provides the necessary facilities, equipment, and support services for conducting advanced, specialized and refresher training for federal law enforcement personnel.

FLETC provides services to state, local, international and other federal law enforcement agencies with related law enforcement missions on a space-available basis. FLETC also provides export training conducted at other locations when the programs being conducted do not require the use of certain specialized facilities and when a geographical concentration of personnel is identified.

Consolidation of law enforcement training permits the Federal Government to cost-effectively emphasize training program excellence and shared experiences in cooperative training. Professional instruction and practical application provide students with the skills and knowledge necessary to meet the demanding challenges of a federal law enforcement career. New federal hires and journey level personnel learn not only the responsibilities of a law enforcement officer and agent, but through interaction with students from many other agencies, they also become acquainted with the missions and duties of their colleagues. This interaction provides the foundation for a more cooperative federal law enforcement effort.

FLETC's Partner Organizations have considerable input regarding training issues as well as operational and functional aspects of the Center. Representatives from these agencies take part in regular curriculum review and development conferences, and participate in the development of FLETC policies and directives. This relationship is characteristic of a "true partnership", which is responsive to the training mission.

**C – Budget Request Summary:**

The President’s Budget requests \$38,456,000. The adjustment-to-base decrease of \$5,000,000 will be offset with large unobligated balances. There are no program changes.

## II. Summary of FY 2011 Budget Estimates by Program/Project Activity (PPA)

**Department of Homeland Security

### III. Current Services Program Description by PPA

**Department of Homeland Security  
Federal Law Enforcement Training Center  
Acquisition, Construction, Improvements & Related Expenses:  
Program Performance Justification  
(Dollars in Thousands)**

**PPA: Acquisition, Construction, Improvements & Related Expenses:**

	<u>Perm. Pos</u>	<u>FTE</u>	<u>Amount</u>
<b>2009 Actuals</b>	-	-	<b>37,418</b>
<b>2010 Enacted</b>	-	-	<b>43,456</b>
2011 Adjustments-to-Base	-	-	(5,000)
<b>2011 Current Services</b>	-	-	<b>38,456</b>
<b>2011 Total Request</b>	-	-	<b>38,456</b>
Total Change 2010 to 2011	-	-	(5,000)

The President's Budget requests \$38.456 million for this activity. The adjustment-to-base decrease of \$5.000 million will be offset from large unobligated balances. There are no program changes.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Acquisition, Construction, Improvement & Related Expenses:** This account provides for the acquisition and related costs for the expansion and maintenance of FLETC, to include funding for the Facilities Master Plan, Minor Construction and Maintenance, Environmental Compliance, and Communications Systems. The Master Plan provides the long range blueprint for expansion of facilities to meet the training requirements of over 85 Partner Organizations. Minor Construction and Maintenance provides alterations and maintenance funding for approximately 300 buildings at four locations. These locations include Glynco, Georgia which has a projected utilization rate of 75% in FY 10; Artesia, New Mexico which has a projected utilization rate of 65% in FY 10; Charleston, South Carolina which has a projected utilization rate of 92% in FY 10; and Cheltenham, Maryland which has a projected utilization rate of 21% in FY 10. Environmental Compliance funding is to ensure compliance with the EPA and State environmental laws and regulations. Communications Systems funding is to maintain and repair or replace the fiber optics telecommunications cable system.

Current Services includes \$9.381 million funding for construction and maintenance of the Practical Applications/Counterterrorism Operations Training Facility (PA/CTOTF). The PA/CTOTF is a five-year construction project funded in FY07-FY11 that is dedicated to providing the “hands-on” training necessary to meet the expanding needs of law enforcement in the post-9/11 environment. The 220-acre PA/CTOTF site will be composed of five training environments: international, intermodal, rural, urban and suburban – all designed to replicate both foreign and domestic settings.

Work completed on PA/CTOTF:

- a. The International Site opened for training April 2006.
- b. The Intermodal Site (727 Jet, Rail Cars and Buses) opened for training April 2006.
- c. The Situational Training Complex (Bldg 76) opened for training April 2008.

Work in progress on PA/CTOTF:

- a. Intermodal Site Terminal Building construction to be complete 4<sup>th</sup> quarter FY 11.
- b. Architecture and Engineering Firm and CMc Construction Contractor selected for the Urban/Suburban Site.

The FY11 Request includes a \$5,000,000 reduction which will be offset from large unobligated balances.

#### IV. Program Justification Changes

## **A. Mission and Description of the Federal Law Enforcement Training Center**

The mission of the Federal Law Enforcement Training Center (FLETC) is to train those who protect our homeland. The FLETC is the Federal government's leader for and provider of world-class law enforcement training. The FLETC prepares new and experienced law enforcement professionals to fulfill their responsibilities in a safe manner and at the highest level of proficiency. Training consists of all phases of law enforcement instruction, from firearms and high-speed vehicle operations, to legal case instructions and defendant interview techniques. Through consolidated training the FLETC can respond quickly to emerging training needs, readily adapt to new requirements and focus exclusively on training, which is the FLETC's only mission. The FLETC delivers interagency training with optimal efficiency through the government-wide sharing of facilities, equipment and expertise which produces economies of scale available only from a consolidated law enforcement training organization.

The FLETC currently operates four training sites throughout the United States for multiple agency use. FLETC's headquarters and training site in Glynco, Georgia has classrooms, dining and residence halls, and state-of-the-art facilities for firearms, physical techniques, driver, marine and computer based training activities. Two field locations that provide both basic and advanced training are located in Artesia, New Mexico, and Charleston, South Carolina. The fourth training site, Cheltenham, Maryland, primarily provides firearms, drivers and tactics re-qualification training for officers and agents in the metropolitan Washington, DC area. The U.S. Capitol Police is co-located at Cheltenham and conducts Pre and Post Basic Training along with an array of advanced training. In cooperation with the Department of State, the FLETC manages International Law Enforcement Academies in Gaborone, Botswana and San Salvador, El Salvador, and serves as Deputy Director at the International Law Enforcement Academy in Bangkok, Thailand. Additionally, the FLETC provides training and technical assistance at locations worldwide in collaboration with and support from the respective U.S. Embassies abroad.

## **B. Major Programs and Key Strategic Goals**

The FLETC: 1) serves over 85 Federal Partner Organizations having law enforcement responsibilities; 2) provides training and technical assistance to state, local and tribal law enforcement entities; and 3) plans, develops, and presents formal training courses and practical exercise applications related to international law enforcement training in the interest of combating global crime and protecting U.S. interests abroad. Service to these three major client groups underscore the FLETC's Homeland Security support mission in promoting intergovernmental cooperation in law enforcement preparedness.

In FY 2009, the FLETC received \$332,986,000 to provide law enforcement training and re-qualification to 67,244 students.

### **FY 2009 Accomplishments**

- Provided training to 67,244 law enforcement students (238,768 student weeks).
- Received academy re-accreditation and program re-accreditation for the Boat Operators Anti-Terrorism Training Program (BOAT), the Law Enforcement Driver Instructor

Training Program (LEDITP), the Law Enforcement Instructor Training Program (LEITP), the Marine Law Enforcement Training Program (MLETP), and the Law Enforcement Control Tactics Instructor Training Program (LECTITP).

- Provide increased training for Border Patrol and ICE in support of the Secure Border Initiative (SBI).

#### Projected FY 2010 Accomplishments

- Provide training to over 66,000 law enforcement students (190,000 student weeks).
- Receive program re-accreditation for the Law Enforcement Fitness Coordinator Training Program (LEFCTP), the Law Enforcement Instructor In-Service Training Program (LEIISTP), the Criminal Investigator Training Program (CITP), and the Inland Boat Operators Training Program (IBOT).
- Complete construction of a physical training facility in Charleston, SC.
- Complete construction of a firearms multipurpose facility in Artesia, NM.
- Complete construction of a language arts facility in Artesia, NM.
- Complete construction of a detention facility in Artesia, NM.

#### Projected FY 2011 Accomplishments

- Provide training to over 66,000 law enforcement students (190,000 student weeks).
- Receive program re-accreditation for the Firearms Instructor Training Program (FITP), the Land Management Police Training Program (LMPT), and the Uniformed Police Training Program (UPTP).
- Complete construction of a dormitory in Charleston, SC.

The key strategic issues and priorities of the FLETC for the next five years will focus on expanding training programs through partnerships, emerging state-of-the-art training technology, sharing increased capacity in the most cost-effective manner using the consolidated law enforcement training concept, and providing federally accredited law enforcement training. The law enforcement officers trained at FLETC are the primary resources used to make the homeland more secure. In particular, during FY 2011 through FY 2015, the FLETC will concentrate our efforts on:

- *Ensuring state-of-the-art technology:* The FLETC continues its partnership with Naval Air Warfare to integrate modeling and simulation technology to support driver and firearms training. The simulation technology emulates highly dangerous law enforcement scenarios while enabling student learning in a safe and controlled environment. The FLETC will also focus on TRAIN21, a business operations and training transformation initiative that will integrate classroom instruction and real-world situation and decision-making practical exercises with technology-based training.
- *Partnering with state and local law enforcement entities:* The FLETC continues to revise and develop training programs for export delivery to state, local, tribal and campus law enforcement agencies. This partnership fosters cooperation, provides technology, improves response coordination and maximizes recovery between these agencies and Federal law enforcement agencies in emergency-related situations in the United States. Emerging programs for this area of training include domestic violence training and anti-terrorism intelligence training. The Rural Policing Institute was

established in FY 2009 to address more fully the training needs of law enforcement officers from small town and rural agencies, which comprise 95 percent of the state, local, tribal and campus law enforcement population.

- *Law enforcement training capacity:* The FLETC evaluates facilities requirements based on Partner Organization training requests and the facilities needed to provide the training. The FLETC is currently modifying its Strategic Master Plan for Facilities to provide for capacity associated with long term training needs. The FLETC continues to explore and apply training alternatives such as the use of technology-based solutions, including computer modeling and simulation, Web-based training and computer based training, in order to provide the most up-to-date training.

### **C. Resources Requested and Performance Impact**

Major Changes within the Base Level

The FLETC’s FY 2011 request is \$278,375,000. The adjustment to base includes increases of \$625,000 for annualization, \$1,312,000 for pay inflation, \$4,000,000 for transfer of the National Computer Forensics Institute, and decreases of \$6,274,000 for management efficiencies and \$4,100,000 non-recur of TRAIN21.

### **D. Performance Highlights, Resources, and Alignment to Strategic Goals**

For each mission-oriented program, the program performance goal, alignment to Secretary’s Priorities, total dollars and FTE, and Government Performance and Results Act (GPRA) performance plan measures are shown below. Additional measures are also displayed, as appropriate, to provide a more thorough context of expected performance results.

<b>Program: Accreditation</b>						
<b>Performance Goal:</b> Accredit all Federal law enforcement training.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	None	\$1,290	\$1,290	\$1,290	\$1,309	\$1,419
<b>FTE</b>	None	7	7	7	7	7

### **Performance Measures**

<b>Measure:</b> Number of Federal Law Enforcement Training Accreditation assessments conducted for accreditation or re-accreditation.
<b>Description of Measure:</b> This performance measure reflects the number of Federal Law Enforcement Training Accreditation (FLETA) assessments conducted for Federal law enforcement training programs and academies in the current fiscal year. Assessments are conducted to determine if training programs and/or academies meet FLETA standards for accreditation/re-accreditation. FLETA assessments for accreditation are conducted when Federal law enforcement agencies submit an application requesting accreditation of their training programs and/or academies. Assessments for re-accreditation are conducted every three years. Working through FLETA, trainers in the same discipline assist each other in evaluating and improving their professionalism, leading to a high-degree of public confidence in competent Federal law enforcement agents and officers.

<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	NA	19	21
<b>Actual:</b>	None	None	None	18		

<b>Measure:</b> Number of Federal law enforcement training programs and/or academies accredited or re-accredited through the Federal Law Enforcement Training Accreditation process.						
<b>Description of Measure:</b> This performance measure reflects the cumulative number of Federal law enforcement training programs and/or academies accredited or re-accredited through the Federal Law Enforcement Training Accreditation (FLETA) process. Accreditation ensures that training and services provided meet professional training standards for law enforcement. Re-accreditation is conducted every three years to remain current. The results of this measure provide on-going opportunities for improvements in Federal law enforcement training programs and academies. Working through FLETA, trainers in the same discipline assist each other in evaluating and improving their professionalism, leading to a high-degree of public confidence in competent Federal law enforcement agents and officers.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	NA	52	56
<b>Actual:</b>	None	None	None	50		

<b>Program: Law Enforcement Training</b>						
<b>Performance Goal:</b> Provide law enforcement agents and officers, skilled in the latest techniques, to enforce laws and regulations, protect the Nation, and interact with the public with respect for individuals and civil liberty.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	\$289,880	\$273,989	\$287,376	\$331,696	\$281,503	\$276,956
<b>FTE</b>	932	1,040	1,049	1,139	1,096	1,096

**Performance Measures**

<b>Measure:</b> Percent of Partner Organizations satisfied that the Federal Law Enforcement Training Center training programs address the right skills needed for their officers/agents to perform their law enforcement duties.						
<b>Description of Measure:</b> This performance measure reflects the satisfaction of Partner Organizations that Federal Law Enforcement Training Center (FLETC) training programs address the right skills needed for their officers/agents to perform their law enforcement duties such as the prevention of the introduction of high-consequence weapons of mass destruction, terrorism and other criminal activity against the U.S. and our citizens. The results of the measure provide on-going opportunities for improvements that are incorporated into FLETC training curricula, processes and procedures.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	73%	74%	75%	79%	83%	84%
<b>Actual:</b>	71%	79.75	79.75%	82%		

<b>Measure:</b> Percent of Partner Organizations satisfied with the overall Federal Law Enforcement Training Center training experience.						
<b>Description of Measure:</b> This performance measure reflects the satisfaction of Partner Organizations with the overall Federal Law Enforcement Training Center (FLETC) training experience. The training experience is defined as law enforcement training and services (e.g., housing, food, logistics, recreation, etc.) provided to Partner Organization students and training staff. FLETC training programs prepare Partner Organization officers/agents to perform their law						

enforcement duties such as the prevention of the introduction of high-consequence weapons of mass destruction, terrorism and other criminal activity against the U.S. and our citizens. The results of the measure provide on-going opportunities for improvements that are incorporated into FLETC training curricula, processes and procedures.

<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	81%	92%	93%
<b>Actual:</b>	None	None	None	91%		

**Measure:** Percent of Partner Organizations satisfied with the training provided by the Federal Law Enforcement Training Center.

**Description of Measure:** This performance measure reflects the satisfaction of Partner Organizations with the training provided by the Federal Law Enforcement Training Center (FLETC) to their officers/agents to perform their law enforcement duties such as the prevention of the introduction of high-consequence weapons of mass destruction, terrorism and other criminal activity against the U.S. and our citizens. The results of the measure provide on-going opportunities for improvements that are incorporated into FLETC training curricula, processes and procedures.

<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	Baseline	92%	87%	89%	90%	91%
<b>Actual:</b>	91%	87.8%	87.8%	89%

iii. Status of Congressionally Requested Studies, Reports, and Evaluation

**Department of Homeland Security  
Science and Technology Directorate**

<b>Fiscal Year</b>	<b>Due Date</b>	<b>Reference/Citation</b>	<b>Requirement</b>	<b>Status</b>
FY 2008	Dec. 2009	S. Rept. 110-84, to accompany the Department of Homeland Security Appropriations Bill, 2008, (S. 1644)	<b>C-MANPADS</b> -- The Committee was disappointed to learn that additional funding provided in fiscal year 2007 for a comprehensive passenger aircraft suitability assessment resulted in a decision by the administration to push back its report and recommendation on deployment of these systems until fiscal year 2010. While the additional resources allowed a greater number of aircraft to be assessed, the major concerns about these systems such as effectiveness and reliability should soon be well characterized. The Committee directs the Department to report on the first portion of Phase III testing by the end of fiscal year 2008 and provide a recommendation on whether these systems are suitable for deployment or not.	DHS will submit in February.
FY 2009 and FY 2010	Report due with FY 2011 Budget Submission	Conference Report (111-298 ), to accompany the Department of Homeland Security Appropriations Act, FY 2010 and H.R. 111-157 .	<b>Unexpended Obligations (V&amp;V)</b> -- Based on the Directorate’s ongoing validation and verification reviews, S&T shall also submit with its fiscal year 2011 budget request and each subsequent fiscal year a report on the amounts deobligated from projects in the prior fiscal year (fiscal year 2009) and what projects those funds were subsequently obligated to. [H.R. 111-157: Furthermore, the Committee is pleased with the efforts that S&T has made to recover and realign funds that have lain dormant due to expired programs, or lack of expenditure. S&T is directed to continue briefing the Committee on the results of its quarterly validation and verification reviews, report the amount available to de-obligate, and identify how S&T plans to use these funds.]	DHS will submit in February.
FY 2010	3/5/2010	S. Rept. 111-31, to accompany the Department of Homeland Security Appropriations Bill, 2010	<b>TSL Five-Year Master Facility Plan</b> -- Further, \$5,000,000 is included, as requested, for infrastructure upgrades at the Transportation Security Laboratory [TSL]. To ensure that the Committee has the full long-term plan for modernizing the laboratory, S&T shall provide a 5-year master facility plan for improvements at the TSL to the Committee by March 5, 2010.	DHS will submit in March.
FY 2010	60 days following enactment (Dec. 20)	Conference Report (111-298 ), to accompany the Department of Homeland Security Appropriations Act, 2010	<b>First Responder IPT Expenditure Plan</b> -- The conference agreement provides \$46,134,000 for Transition as proposed by the House instead of \$45,134,000 as proposed by the Senate. Within the funds provided, \$10,000,000 is provided for first responder technologies as requested; \$2,000,000 is for the Naval Postgraduate School to design, develop and field test first responder technologies outside of the integrated product team process as requested; and \$1,000,000 is to continue a manufacturing pilot program to identify and transition advanced technologies and manufacturing processes in the homeland security industrial base. S&T shall provide an expenditure plan for the first responder technology program within 60 days after the date of enactment of this Act.	DHS will submit in February.

FY 2010	Within 30 days of enactment (Nov. 27)	Conference Report (111-298 ), to accompany the Department of Homeland Security Appropriations Act, FY 2010	<b>Implementing NAPA Recommendations --</b> As discussed in the Senate report, S&T shall report within 30 days after the date of enactment of this Act on its plans and timelines for full implementation of the National Academy of Public Administration study recommendations related to strategic planning. [S. Rept. 111-31, At the direction of the Committee, the National Academy of Public Administration [NAPA] undertook an independent review of research and development spending on homeland security within the Federal Government. As a result, NAPA found that S&T's efforts could be improved with the development of an internal strategic plan to focus efforts and measure progress of research projects. In addition, NAPA recommends a more coordinated approach to developing the Federal homeland security research strategic plan mandated by section 302 of Public Law 107-296. S&T is directed to report to the Committee within 30 days of the date of enactment of this act on its plans and timelines for full implementation of the NAPA recommendations in this area. ]	DHS will submit in February.
FY 2010	Report due with FY 2011 Budget Submission	Conference Report (111-298 ), to accompany the Department of Homeland Security Appropriations Act, FY 2010	<b>R&amp;D Results --</b> As part of the fiscal year 2011 budget request and in each subsequent fiscal year, S&T shall report on the results of its research and development efforts in the prior year (fiscal year 2009), including all technologies, technology improvements, or capabilities delivered to front line users, and the role the Integrated Product Teams played in the development.	DHS will submit in February.
FY 2010	Obligation of funds prohibited until assessment complete	Conference Report (111-298 ), to accompany the Department of Homeland Security Appropriations Act, 2010	<b>NBAF Risk Assessment --</b> Due to concerns raised by GAO about DHS's original assessment of the risk related to foot-and-mouth disease research on the U.S. mainland, a general provision is included prohibiting the obligation of these funds for NBAF construction until the Secretary undertakes a bio-safety and bio-security mitigation risk assessment using plume and epidemiologic impact modeling to determine the requirements for the safe operation of NBAF in Manhattan, Kansas. Once DHS completes the risk assessment, the National Academy of Sciences (NAS) shall provide an independent evaluation of the DHS study within four months to ensure that risk has been adequately identified and mitigated in planning for NBAF. Up to \$2,000,000 of the amount provided may be used for the NAS evaluation.	Risk assessment is underway.
FY 2010	None specified	Conference Report (111-298 ), to accompany the Department of Homeland Security Appropriations Act, 2010	<b>NBAF (foot and mouth disease R&amp;D permits and emergency response plan) --</b> In addition, the conferees continue bill language, proposed by the Senate, that requires the Secretary of Homeland Security, in coordination with the Secretary of Agriculture, to report to the Committees on the procedures used to issue a permit for foot-and-mouth disease live virus research and an emergency response plan in the event of an accidental release of a hazardous pathogen originating from NBAF.	DHS will submit this plan following the completion of necessary assessments.

<b>BUDGET REQUEST AND SUPPORTING INFORMATION</b>
--

**Management and Administration:**

## **I. Appropriation Overview**

### **A – Mission Statement for Management and Administration:**

Fund the effective and efficient management and leadership of the S&T Directorate activities to deliver advanced technology solutions to DHS components and first responders.

### **B – Budget Activities:**

The Management and Administration (M&A) appropriation provides for salaries and benefits related to 317 FTE at the S&T Directorate headquarters. The 317 FTE provide executive direction to the S&T Directorate for program management, program execution oversight, program analysis, policy analysis, planning, financial management, guidance formulation, and operations and maintenance support for all S&T Directorate programs.

The M&A appropriation funds business operations and the S&T Directorate's share of the DHS Working Capital Fund. The Business Operations functions include paying for rent, office supplies, utilities, and other operational functions associated with the S&T Directorate's Washington, D.C. headquarters. This account pays for the training and travel associated with senior management of the S&T Directorate and contractor staff who support the execution of headquarters functions, such as financial management, facility planning, maintenance, and other administrative functions. M&A also funds the administration of the S&T Directorate's regulatory and treaty compliance activities, the management of the Small Business Innovation Research (SBIR) program, and the financial and programmatic databases. The M&A appropriation does not fund the contractor support or travel associated with the direct execution of Research, Development, Test, and Evaluation (RDT&E) programs across the S&T Directorate.

### **C – Budget Request Summary:**

The S&T Directorate requests 317 FTE and \$151.959 million for M&A in FY 2011, an increase of \$8.759 million from FY 2010. The total adjustments-to-base of \$10.892 million include funding for a 1.4 percent pay raise, \$5.040 million for data center consolidation and, the transfer of \$3.0 million in M&A funds and \$1.0 million in R&D funds from the Domestic Nuclear Detection Office to cover the salaries and benefits of 12 FTE and related Working Capital Fund expenses. FY 2011 includes a reduction of staff by 12 FTE to fund \$2.133 million based on realistic FY 2010 to FY 2011 inflation assumptions.

Total Change 2010 to 2011	35	39	8,759

The S&T Directorate requests \$151.959 million for this activity. This is an increase of \$8.759 million over FY 2010.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The M&A appropriation funds salaries and benefits related to 317 FTE at the S&T Directorate headquarters. The 317 FTE provide executive direction to the S&T Directorate for policy analysis, planning, financial management, and guidance formulation. These FTE also conduct program management, program execution oversight, program analysis, as well as operations and maintenance support for all S&T Directorate programs. The request includes a staffing increase of 39 FTE; this is a combination of a 12 FTE reduction to offset costs for inflation, 4 FTE for the annualization of Acquisition Review Board positions and an increase of 35 FTE to the authorized FTE level from converting M&A funded contractors to Federal employees. In addition, DHS is transferring \$4.0 million and 12 FTE from the Domestic Nuclear Detection Office to the S&T M&A appropriation to cover the salaries and benefits of the 12 FTE and related Working Capital Fund expenses. The increase in FTE will not require additional funds and will be offset within the appropriation by replacing M&A-funded contract staff with M&A-funded Federal employees. This also reduces the S&T Directorate's reliance on contractor staff.

The M&A appropriation funds all of the corporate-level functions in the S&T Directorate that allow the technical divisions to manage the Research, Development, Test, and Evaluation (RDT&E) programs. Those functions include the Strategy, Policy, and Budget Division, including the Chief Financial Officer; the Business Operations Division, which manages the facilities, personnel and the information technology infrastructure; the Operations Analysis Division, which provides science-based risk analyses; and the Corporate Communications Division, which coordinates internal and external information dissemination. The DHS Working Capital Fund provides those shared services that the components rely on to execute their missions, such as contracting officers and the DHS-wide information technology infrastructure.

### **Division Support**

The S&T Directorate has seven divisions and four key offices, each of which has an important role in implementing RDT&E activities. The M&A appropriation funds the federal salaries and business operations of these divisions.

Borders and Maritime Security Division – develops and transitions tools and technologies that improve the security of our Nation’s borders and waterways without impeding the flow of commerce and travelers.

Chemical and Biological Division – works to increase the Nation’s preparedness against chemical and biological threats through improved threat awareness, advanced surveillance and detection, and protective countermeasures.

Command, Control and Interoperability Division – focuses on operable and interoperable communications for emergency responders, security, and integrity of the Internet, and development of automated capabilities to recognize potential threats.

Explosives Division – develops the technical capabilities to detect, interdict, and lessen the impacts of non-nuclear explosives used in terrorist attacks against mass transit, civil aviation, and critical infrastructure.

Human Factors Division/Behavioral Sciences Division – applies the social and behavioral sciences to improve detection, analysis, and understanding of the threats posed by individuals, groups, and radical movements. It supports the preparedness, response, and recovery of communities impacted by catastrophic events and it advances homeland security by integrating human factors into homeland security technologies.

Infrastructure and Geophysical Division – develops capabilities to increase the Nation’s preparedness for and response to natural and man-made threats through superior situational awareness, emergency response capabilities, and critical infrastructure protection.

Radiological and Nuclear (rad/nuc) Division – identifies, explores, develops, and demonstrates scientific and technological approaches that address gaps in nuclear

detection, response and recovery, such as: dramatically improving the performance of nuclear detection components and systems; significantly reducing the operational burden of the rad/nuc detection mission; or responding to and recovering from large-scale rad/nuc attacks.

#### Crosscutting Offices:

Innovation – focuses on high-risk/high-reward, homeland security research, and development (R&D) that could lead to technology breakthroughs that significantly enhance DHS operations. The Director of Innovation oversees the Homeland Security Advanced Research Project Agency (HSARPA). The *Homeland Security Act of 2002* directs HSARPA to “support basic and applied homeland security research to promote revolutionary changes in technologies that would promote homeland security; advance the development, testing and evaluation, and deployment of critical homeland security technologies; and accelerate the prototyping and deployment of technologies that would address homeland security vulnerabilities”. The agency’s efforts are complementary to the S&T Directorate’s other programs and projects, pushing scientific limits to address gaps in areas where current technologies and R&D are inadequate or non-existent.

Test & Evaluation and Standards – provides policy and oversight of the Department’s test and evaluation program and technical support and coordination to assist the Nation’s emergency responders in the acquisition of equipment, procedures, and mitigation processes that are safe, reliable, and effective.

Transition – focuses on delivering near-term products and technology enhancements by working with the Department’s components, industry, and other agencies to expedite the technology transition process.

Research – Laboratory Facilities – Office of National Laboratories (ONL) executes Laboratory Facilities programs and provides the Nation with a coordinated, enduring core of productive science, technology, and engineering laboratories, organizations, and institutions, which can provide the knowledge and technology required to secure our homeland.

Research – University Programs – engages the academic community to conduct research and provides education and training programs to support DHS priorities and enhance homeland security capabilities.

The seven technical Divisions and additional offices are linked to three research and development investment portfolio directors in a matrix-managed structure. The three portfolio directors – Director of Research, Director of Transition, and Director of Innovation – provide crosscutting coordination of the investment strategy within the technical Divisions. The matrix structure allows the S&T Directorate to provide more comprehensive and integrated technology solutions to its customers by appropriately bringing all disciplines together in developing leading-edge research solutions.

### **Strategy, Policy and Budget Division**

The Strategy, Policy, and Budget Division provides the S&T Directorate with high-quality, efficient, and cost-effective financial management services through four branches. The Program Analysis and Evaluation (PA&E) Branch develops long-term plans for resource allocation, execution plans, Congressional Justifications, and management of financial resources within the S&T Directorate. The Strategy, Planning, and Integration (SPI) Branch develops and implements internal and external performance metrics for S&T Directorate programs, as well as risk assessment methodologies to help inform programming decisions. The Acquisition Branch develops the S&T Directorate's acquisition strategy, and manages the travel and purchase card programs. The Financial Operations Branch is dedicated to sound fiscal stewardship of the S&T Directorate's appropriations and reimbursable funding; timely and accurate budget execution, financial management and financial reporting; and monitoring programs and activities to provide assurance about the adequacy of internal controls within the S&T Directorate.

### **Business Operations Division**

The Business Operations Division provides critical infrastructure support to the S&T Directorate and is composed of eight components: Facilities, Human Capital Office (HCO), Office of the Chief Information Officer (OCIO), Executive Secretariat, Office of the Chief Administrative Officer (CAO), Office of Administration and Audits, Central Security Office (CSO), and Readiness and Operational Coordination (ROC). In compliance with Presidential Directives, Federal Regulations and Department guidance, the Business Operations Division provides support and continuous process improvement through problem identification and solution, sound policy and procedure development, and high-quality service.

### **Operations Analysis Division**

The Operations Analysis Division provides the S&T Directorate with a wide range of scientific and technical tools to inform planning and management activities. The division provides information to decision-makers and program managers resulting from research, studies, operational analyses, risk analyses, analytic and computational models, simulations, war-games, and experimentation events that it oversees. The division uses these technical and analytical support activities to establish baseline operational capabilities and goals, integrate policy and program planning, and inform management decisions and the development of strategic objectives. The Operations Analysis Division oversees the activities of the Homeland Security Studies and Analysis Institute (HSSAI), Homeland Security Systems Engineering and Development Institute (HSSEDI) and other S&T Directorate-sponsored Federally Funded Research and Development Centers (FFRDCs), and the Homeland Security Science and Technology Advisory Committee (HSSTAC).

### **Corporate Communications Division**

The Corporate Communications Division communicates the objectives and status of homeland security technology programs, disseminates information regarding opportunities for private-sector entities (corporate and academic), and ensures that the media understands and accurately represents DHS technologies and programs. The

Corporate Communications Division holds conferences and manages the S&T Directorate's presence at other information-sharing events to improve contact among technology developers, vendors, and acquisition personnel. They also promote the participation of colleges, universities, private research institutes, and companies (and consortia thereof) in the research process by disseminating information regarding research conducted or sponsored by the Department, and provide public-communication support to the S&T Directorate-sponsored FFRDCs.

**Working Capital Fund**

Funds provided within the M&A appropriation are also used to acquire services through the DHS Working Capital Fund, which includes: IT services, human resources, procurement operations, and financial systems. The Working Capital Fund also provides consolidated subscriptions, government-wide mandated services, and DHS crosscutting activities.

#### IV. Program Justification Changes

**Department of Homeland Security  
Science & Technology  
Management and Administration:

### PPA Mission Statement

The Management and Administration (M&A) appropriation provides for salaries and expenses related to 317 full time equivalent (FTE) personnel in Washington, D.C. This appropriation also provides for the operation of the S&T Directorate's Washington, D.C., headquarters including business operations, contributions to the DHS Working Capital Fund, and other administrative costs associated with the management of the S&T Directorate and its resources.

### Summary Justification and Explanation of Changes

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
11.1 Total FTE & personnel compensation	29,120	37,883	44,881	6,998

Salaries and Benefits includes costs for 317 FTEs. The FY 2011 request includes an increase of \$577,000 for the proposed January 2011 1.4% increase in personnel compensation, \$275,000 for annualization of the prior-year pay raise, a reduction of \$2,133,000 and 12 FTE to cover the required unfunded inflation requirements. Salaries and Benefits includes a transfer of \$2,250,000 from DNDO, an annualization of \$1,000,000 for 8 acquisition review board FTE, and a realignment of \$7,124,000 from the advisory and assistance object class to cover the federal salaries of 35 contractor conversions and existing Federal staff.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
11.3 Other than full-time permanent	2,830	2,159	2,189	30

See description in 11.1.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
11.5 Other personnel compensation	934	1,000	1,250	250

See description in 11.1

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
12.1 Civilian personnel benefits	7,751	10,228	12,042	1,814

See description in 11.1

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
21.0 Travel and transportation of persons	663	1,000	1,000	-

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
23.1 Rental payments to GSA	5,742	-	-	-

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Starting in FY 2010 S&T Rent is being paid through the Working Capital Fund.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
23.2 Rental payments to others	-	824	825	1

Other rent includes all payments to a non-Federal source for rental space, land, and structures.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
23.3 Communications utilities and miscellaneous charges	-	195	195	-

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
24.0 Printing and reproduction	120	120	120	-

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.1 Advisory and assistance services	40,828	39,435	30,365	(9,070)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. A decrease of \$7,124,000 is transferred to Salaries, travel and other services to cover costs of converting 35 contractor staff to Federal employees and a realignment of \$1,946,000 is included to cover increasing Working Capital Fund costs.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.2 Other services	1,633	1,000	1,000	-

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.3 Purchases of goods & svcs. from Gov't accounts	35,778	43,380	52,116	8,736

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. Included is a transfer of \$1,750,000 from DNDO for WCF expenses and a realignment of \$1,946,000 from advisory and assistance services to cover increasing

Working Capital Fund expenses. An increase of \$5,040,000 for the Data Center Consolidation is included.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.7 Operation and maintenance of equipment	548	-	-	-

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
26.0 Supplies and materials	719	815	815	-

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
31.0 Equipment	5,013	5,161	5,161	-

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

## BUDGET REQUEST AND SUPPORTING INFORMATION

### Research, Development, Acquisitions, and Operations

## I. Appropriation Overview

### A – Mission Statement for Research, Development, Acquisitions, and Operations

The Science and Technology (S&T) Directorate advises the Secretary on research and development (R&D) efforts to support the Department’s mission, and conducts basic and applied research, development, testing, and evaluation (RDT&E) activities relevant to the Department through both intramural and extramural programs.

In fulfillment of the enabling and follow-on legislation, Secretary Napolitano stated that the urgent and overriding mission of the Department of Homeland Security (DHS) is to secure the homeland, which means protecting our Nation's borders by finding and eliminating the roots of terrorism and stopping those who intend to hurt us; wisely enforcing the rule of law at our borders; protecting our national cyber infrastructure; and preparing for and responding to natural and man-caused disasters with speed, skill, compassion, and effectiveness. She stated that DHS should build on its science and technology portfolio for the following reasons:

- Better science helps us to understand emerging threats and teaches us how to identify, counter, and mitigate them;
- Better technology can expand our capabilities and free our agents to spend their time where it is most valuable, while at the same time protecting the interests of private citizens by minimizing law enforcement’s impact on lawful activities; and
- Technology can also aid us in consequence management, so that we are better prepared to respond to any type of disaster.

This budget requests funding needed to provide the technologies to address the Administration’s threat prioritization:

- High-Consequence Weapons of Mass Destruction (WMD);
- Al Qaeda and Related Global Terrorist Movements;
- Mass Attacks, Intrusions, and Disruptions to Information and Communications Infrastructure;
- Pandemic, Infectious Disease, and Other Natural Disasters;
- Illegal Trafficking and Related Transnational Crime; and
- Smaller-Scale Terrorism and Violent Extremism.

The S&T Directorate’s budget request aligns with Secretary Napolitano’s priorities:

- Counterterrorism and Domestic Security Management;
- Securing our Borders;
- Smart and Tough Enforcement of Immigration Laws;
- Preparing for, Responding to, and Recovering From Disasters.

## **Mission Statement**

The S&T Directorate will improve homeland security by providing our customers, the operating components of DHS, and State, local, tribal, and territorial emergency responders and officials with state-of-the-art technology that helps them to accomplish their missions.

The S&T Directorate directs, funds, and conducts RDT&E, and enables the procurement of technology and systems to prevent, protect against, and respond to terrorist threats and natural disasters. The S&T Directorate collaborates and coordinates with Federal, State, and local government and private sector entities to conduct its activities. It establishes an efficient system to transfer homeland security developments and technologies to the operational elements of the Department to enhance their ability to execute all missions, now and in the future, and to meet the high priority homeland security RDT&E needs of the Nation.

The S&T Directorate leads the homeland security research enterprise outside of DHS by remaining proactively engaged with universities, research institutions, government laboratories, and private industry that conduct R&D in areas important to addressing our customers' homeland security requirements.

## **Description of Directorate**

The S&T Directorate accomplishes its mission through customer-focused and output-oriented RDT&E programs that balance risk, cost, impact, and time to deliver. These RDT&E programs support the needs of the operational components of the Department and address crosscutting areas such as standards and interoperability.

About 50 percent of the S&T Directorate's investment is in transition technologies – lower-risk projects dedicated to addressing a customer-defined capability needs. Approximately six percent of the S&T Directorate's investment is in higher risk innovative prototypical demonstrations, which, if successful, will place leap-ahead technology in the operating components' hands much more quickly than the incremental improvements typical of most acquisition programs. About 20 percent of the S&T Directorate's investment portfolio is in long-term, basic research conducted primarily in universities and laboratories in areas of enduring homeland security relevance that could lead to revolutionary changes in the way we approach homeland security challenges. This balanced portfolio ensures that the Directorate maintains a self-replenishing pipeline of future capabilities and products to transition to customers.

Other components often leverage the S&T Directorate's expertise in program management, technical oversight, testing and evaluation, and systems engineering. These developmental activities are more technologically mature than the typical science and technology program such as testing new border security technologies for Customs and Border Protection (CBP) or leveraging existing advanced R&D to make spiral improvements to off-the-shelf infrastructure protection technologies.

The S&T Directorate's R&D functions consist of seven technical divisions aligned with enduring functional disciplines. This, along with additional offices, allows us to effectively meet the Department's strategic goals.

### **B – Budget Activities:**

Borders and Maritime Security Division – develops and transitions tools and technologies that improve the security of our Nation's borders and waterways without impeding the flow of commerce and travelers.

Chemical and Biological Division – works to increase the Nation's preparedness against chemical and biological threats through improved threat awareness, advanced surveillance and detection, and protective countermeasures.

Command, Control and Interoperability Division – focuses on operable and interoperable communications for emergency responders, security, and integrity of the Internet, and development of automated capabilities to recognize potential threats.

Explosives Division – develops the technical capabilities to detect, interdict, and lessen the impacts of non-nuclear explosives used in terrorist attacks against mass transit, civil aviation, and critical infrastructure.

Human Factors Division – applies the social and behavioral sciences to improve detection, analysis, and understanding of the threats posed by individuals, groups, and radical movements. It supports the preparedness, response, and recovery of communities impacted by catastrophic events and it advances homeland security by integrating human factors into homeland security technologies.

Infrastructure and Geophysical Division – develops capabilities to increase the Nation's preparedness for and response to natural and man-made threats through superior situational awareness, emergency response capabilities, and critical infrastructure protection.

Radiological/Nuclear Division - identifies, explores, develops, and demonstrates scientific and technological approaches that address gaps in nuclear detection, response, and recovery, such as: dramatically improving the performance of nuclear detection components and systems; significantly reducing the operational burden of the rad/nuc detection mission; or responding to and recovering from large-scale rad/nuc attacks.

### **Crosscutting Offices:**

Innovation – focuses on high-risk/high-reward, homeland security R&D that could lead to technology breakthroughs that significantly enhance DHS operations. The Director of Innovation oversees the Homeland Security Advanced Research Project Agency (HSARPA). The *Homeland Security Act of 2002* directs HSARPA to “support basic and

applied homeland security research to promote revolutionary changes in technologies that would promote homeland security; advance the development, testing and evaluation, and deployment of critical homeland security technologies; and accelerate the prototyping and deployment of technologies that would address homeland security vulnerabilities”. The agency’s efforts are complementary to the S&T Directorate’s other programs and projects, pushing scientific limits to address gaps in areas where current technologies and R&D are inadequate or non-existent.

Test & Evaluation and Standards – provides policy and oversight of the Department’s test and evaluation program and technical support and coordination to assist the Nation’s emergency responders in the acquisition of equipment, procedures, and mitigation processes that are safe, reliable, and effective.

Transition – focuses on delivering near-term products and technology enhancements by working with the Department’s components, industry, and other agencies to expedite the technology transition process.

Research – Laboratory Facilities – executes Laboratory Facilities programs and provides the Nation with a coordinated, enduring core of productive science, technology, and engineering laboratories, organizations, and institutions, which can provide the knowledge and technology required to secure our homeland.

Research – University Programs – engages the academic community to conduct research and analyses and provides education and training programs to support DHS priorities and enhance homeland security capabilities.

The seven technical Divisions and additional offices link to three R&D investment portfolio directors in a matrix-managed structure. The three portfolio directors – Director of Research, Director of Transition, and Director of Innovation – provide crosscutting coordination of the investment strategy within the technical Divisions. The matrix structure allows the S&T Directorate to provide more comprehensive and integrated technology solutions to its customers by appropriately bringing all disciplines together in developing leading-edge research solutions.

### **C – Budget Request Summary:**

The S&T Directorate requests 130 positions, 130 FTE, and \$866,305,000 for Research, Development, Acquisitions, and Operations in FY 2011, an increase of \$3,034,000 from the FY 2010 enacted level. This sustains the amount of funding available for the development of additional technologies for specific high-priority, customer-identified needs identified during the S&T Capstone Integrated Product Team (IPT) process.

### III. Current Services Program Description by PPA

**Department of Homeland Security  
Science & Technology  
Research, Development, Acquisitions, and Operations  
Borders and Maritime  
Program Performance Justification  
(Dollars in Thousands)**

**PPA: Borders and Maritime**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2009 Actual</b>	-	-	<b>31,986</b>
<b>2010 Enacted</b>	-	-	<b>44,181</b>
2011 Adjustments-to-Base	-	-	238
<b>2011 Current Services</b>	-	-	<b>44,419</b>
2011 Program Change	-	-	(4,483)
<b>2011 Total President's Budget</b>	-	-	<b>39,936</b>
Total Change 2010 to 2011	-	-	(4,245)

The Science and Technology (S&T) Directorate requests \$39.936 million for Borders and Maritime in FY 2011; of this amount, \$0.998 million supports the Small Business Innovative Research (SBIR) program. The \$4.245 million decrease in FY 2011 ensures that the Department's highest priority capabilities are fully funded to achieve its core missions and reduces technology development for the Borders and Maritime Capstone Integrated Product Teams (IPTs). Despite this reprioritization of resources, the Division will continue to conduct research and development for technologies to support U.S. border security.

**CURRENT SERVICES PROGRAM DESCRIPTION**

The Borders and Maritime Security Division (BMD) develops technical capabilities that enhance U.S. border and cargo security without impeding the flow of commerce or travelers. The division works closely with its operational customers to identify and generate the best technologies for securing U.S. borders. The division's responsibility encompasses all air, land, and maritime borders, including U.S. ports-of-entry and inland waterways.

The primary customers for technologies developed by BMD are the United States Coast Guard (USCG), Customs and Border Protection (CBP), Immigration and Customs Enforcement (ICE), Transportation Security Administration (TSA), and U.S. Citizenship

and Immigration Services (USCIS). All funded projects address gaps in customers' operational capabilities and support the DHS S&T Directorate's mission.

**Border Watch Thrust Area** – Develops and applies technologies and tools that:

- Increase detection of illegal land and maritime border activity while requiring less manpower;
- Reduce agent response time and increase officer safety;
- Provide connectivity (where it currently does not exist) to law enforcement officers; and/or
- Provide real-time, relevant information to DHS component command centers and various levels of law enforcement.

Border Watch develops a network of advanced sensor and communication technologies that provides critical information about illegal activities along the U.S. border to law enforcement officers. Currently, border operations, both at and between ports-of-entry, rely on operators' institutional knowledge and aging technology. Border Watch aims to deliver advanced detection, classification, and localization technologies that enhance law enforcement officers' ability to secure the borders efficiently and effectively.

Border Watch activities support the Secure Border Initiative (SBI), a comprehensive multi-year plan by CBP; and the Interagency Operation Centers, an initiative by USCG. SBI works to secure America's borders and reduce illegal immigration, and the Interagency Operation Centers work to enhance command-and-control capabilities for maritime entities. The thrust area includes the following programs: Border Technologies, Maritime Technologies, and Border Officer Tools and Safety.

***Border Officer Tools and Safety Program*** – FY 2010: \$5.084 million; FY 2011 estimate: \$0.800 million. Provides tools and technologies to enable border-security law enforcement to perform their mission more safely, efficiently, and effectively. This program will tailor technologies developed for other government agencies to meet homeland security operational needs so DHS operating components can use them.

***Border Officer Safety Project*** – Integrates technologies that will enable law-enforcement agents to perform their mission more safely. These technologies include, but are not limited to:

- Enhanced Ballistic Protection – delivers lighter weight, more durable, and higher strength materials and equipment to increase a field agent's ballistic protection while reducing his equipment load;
- Hidden Compartment Inspection Device – allows agents to non-intrusively detect people and contraband hidden behind walls and other barriers from a greater standoff distance.

In FY 2009, the project identified solutions to meet ballistic protection requirements from DHS border security law enforcement entities and completed an assessment of a hidden-compartment inspection device. In FY 2010, the project will upgrade the design for hidden-compartment inspection devices for vessels and vehicles. In FY 2011, the project

plans to demonstrate the hidden compartment inspection device in an operational environment and deliver to CBP and USCG.

*Border Officer Tools Project* – Improves law enforcement agent effectiveness and officer/agent safety while searching vessels and vehicles. Many of these tools will leverage technology DHS or Department of Defense (DOD) are currently pursuing for other purposes. These tools will provide:

- Secure communication (e.g., voice and data) among field operators and between the field and the command center;
- Intrusive (i.e., requires contact) as well as non-intrusive, non-destructive capability to identify contraband; and
- 24-hour, real-time high-resolution image transmission capability from the field to forensic laboratory for document authentication

In FY 2009, the project successfully demonstrated a prototype capability to ICE that can scan and transmit important security features associated with travel documents from the field to remotely located experts for examination. In FY 2010, the project will conduct operational evaluation of a real-time image transmission device and will investigate the feasibility of a comprehensive (chemical, biological, and explosive), man-portable detection device. In FY 2011, the project plans to conduct a final demonstration of the real-time image transmission device and transition it to ICE. The project also plans to investigate current and emerging counter-surveillance technologies for field agents.

*Border Technologies Program* – FY 2010: \$14.638 million; FY 2011 estimate: \$17.456 million. Delivers technologies for advanced detection, identification, apprehension, and enforcement capabilities along land and maritime borders. The program develops:

- Detection, classification, and localization sensor technologies to monitor illegal border activity with a wider range and greater accuracy than current technologies;
- Command and control systems that can enhance the quality and timeliness of information to different levels of law enforcement; and
- Communications systems that provide connectivity to law enforcement officers working in remote locations.

These technologies will ensure efficient use of border security assets and will provide law enforcement components with timely and greater access to robust and reliable information required for their mission. Projects in this program include BorderTech, Sensors/Data Fusion and Decision-Aids, SBI Systems Engineering and Modeling & Simulation, and Urban Tunnel Detection Basic Research.

*BorderTech Project* – Develops technologies for advanced detection, identification, apprehension, and enforcement capabilities along land and maritime borders. This project develops, demonstrates, and tests technologies to reduce program risk for the Secure Border Initiative Network (SBI*net*). BorderTech includes, but is not limited to, the following activities:

- North East Test Bed (NET-B) – evaluates Northern Border surveillance technologies in an operational environment testbed, enabling agent training and tactics development, as well as testing of developmental hardware in operational environments;
- Unattended Ground Sensor (UGS) Test Bed – evaluates new UGS technologies for detecting human border crossings and assists in agent training and tactics development;
- Advanced Sensor Technologies – develops advanced technologies to improve border sensor capabilities and addresses the problem of illicit people and goods entering the U.S. via public underground infrastructure; and
- Renewable Energy Basic Research – assesses energy scavenging, power sources, and energy management for remote areas or areas with minimal infrastructure.

In FY 2009, the project installed a command-and-control, distributed backbone for the NET-B; performed proof-of-concept tests with tunnel-activity sensors; conducted a study of renewable energy sources for sensors; and completed equipment checkout for the UGS testbed on the southern border. In FY 2010, the project will continue developing tunnel-activity sensors and will evaluate land-border tripwires. In FY 2011, the project plans to continue testing advanced sensor technologies and demonstrate renewable energy-sensor capabilities for the inland waterways and port/harbor security environments.

*SBI Systems Engineering and Modeling & Simulation Project* – Provides tools that capture complex relationships between immigration and border security for strategic planning and support. In FY 2009, the project began transitioning an immigration model and transportation-of-people model to CBP and ICE, and will complete the transition in FY 2010.

*Urban Tunnel Detection Basic Research Project* – Provides a better understanding of the effectiveness and limitations of various detection technologies against different types of cross-border tunnels. The project also investigates other methods that will enhance clandestine tunnel detection (predictive capability for tunnel location based on intelligence, change detection, geophysical, etc.). Detection of tunnels requires a combination of direct and indirect methods to determine the shape, size, and position of the tunnel. This basic research will identify the best methods for tunnel detection. In FY 2010, the project will research and characterize different key urban border regions and identify technologies with the greatest potential for detecting tunnels. In FY 2011, the project plans to initiate requirements analysis.

*Sensors/Data Fusion and Decision-Aids Project* – Develops tools to enable full situational awareness, effective decision-making and timely response by law enforcement officers and agents operating in complex and dynamic environments. This project combines information from different types of sensors (sensor fusion) and data systems to provide critical information that will promote reliable detection and tracking capabilities. This project will:

- Provide the capability to fuse tactical information from multiple data sources, such as sensors and databases (both law enforcement and commercial databases);
- Provide real-time situational awareness;
- Eliminate scene clutter;
- Identify and track high-risk targets (e.g., people, vehicles, and vessels) automatically;
- Provide decision aids;
- Facilitate multi-agency coordination for rapid response; and
- Enable Unmanned Aerial Systems (UAS) to sense other air traffic and maneuver as needed to avoid a mid-air collision.

In FY 2009, the project delivered modeling and simulation capabilities for cooperative and non-cooperative air traffic as part of the UAS effort, and assessed the performance of current national system capabilities to assist operational components in the interdiction of self-propelled semi-submersibles (SPSS). In FY 2010, the project will demonstrate and transition initial Automated Scene Understanding (ASU) maritime capabilities to CBP and USCG and deliver modeling and simulation results for UAV-related USCG applications. In FY 2011, the project plans to develop and demonstrate a multi-sensor and multi-data fusion capability to CBP and USCG; demonstrate and transition initial ASU land capability on the Southern Border to CBP; and develop an improved SPSS detection system.

***Maritime Technologies Program*** – FY 2010: \$9.000 million; FY 2011 estimate: \$5.000 million. Develops advanced detection, identification, interdiction, and enforcement technologies for rapid, coordinated responses to maritime threats.

This program will provide significant risk mitigation while complementing major proposed acquisition efforts, such as the USCG's Interagency Operation Centers and CBP's SBIInet. Projects in this program include Maritime Security Technology Pilot Project, Sensors and Surveillance, and Situational Awareness and Information Management.

***Maritime Security Technology Pilot Project*** – Provides a maritime environment for the development, testing, and evaluation of new sensors and surveillance technologies. In FY 2010, the project will establish a controlled, operational testbed with settings representative of DHS operational environments. Funding for this project ends in FY 2010.

***Sensors and Surveillance Project*** – Develops and demonstrates visual and non-visual technologies for monitoring the maritime border, including U.S. coastal and contiguous waters, along the shore, in ports and harbors as well as inland waterways. The project includes the following:

- Advanced Geospatial Intelligence (AGI) Technical Exploitation – demonstrates data processing and exploitation to provide wide-area surveillance of the offshore maritime environment;

- Port and Coastal Radar Improvement – tests and evaluates the performance of a commercially available off-the-shelf radar coupled with advanced signal processing to detect, track, and identify large and small vessels in port and coastal regions under a variety of operational and environmental conditions; and
- Small Boat Harbor Surveillance Study/Pilot – develops and tests near-term technologies for tracking small boats in a port environment and demonstrates the improved situational awareness through an operational test/pilot program.

In FY 2009, the project performed a market survey of potential technologies, which resulted in plans for technology development and prototype demonstrations. The project also evaluated a new approach to detect and track vessels in port and coastal areas (0-12 nm offshore) with low-cost, commercially available radars coupled with advanced signal processing to overcome environmental clutter issues. The project also investigated current and emerging AGI technologies for detecting small boats. In FY 2010 and FY 2011, the project plans to develop several new prototype systems for identifying and tracking small vessels in harbor environments; detecting and tracking vessels in port and coastal regions; and tracking Certain Dangerous Cargo (CDC) barges on inland rivers. The project will test and evaluate a newly developed radar collection reporting system, Shipboard AIS and RADAR Contact Reporting (SARCR), which integrates data available from the existing shipboard Automated Information System (AIS) and existing shipboard radar systems. This technology will monitor vessel traffic in maritime regions where there is no shore and/or space-based surveillance coverage

*Situational Awareness and Information Management Project* – Enhances the ability of law enforcement to quickly detect and localize maritime threats and provide timely decision-support information. In FY 2009, the project performed a study of technologies that can covertly track illegal contraband to its final destination. In FY 2010, the project will transition the OTH results for boarding team communications, and an initial Advanced Automated Scene Understanding maritime capability to CBP and USCG. In FY 2011, the project plans to provide a Port Security Testbed to demonstrate maturing technologies in an operationally relevant environment for USCG, CBP, and other Federal, State and local First Responders in and around a port area.

**Cargo Security Thrust Area** – Develops technologies to enhance the end-to-end security of the international supply chain by providing the capability to ensure the physical integrity of cargo shipments; increasing supply chain visibility through tracking and chain-of-custody monitoring; and increasing the detection of threats in shipping containers.

**Cargo and Conveyance Security Program** – FY 2010: \$14.355 million; FY 2011 estimate: \$15.682 million. Technologies developed in this program will enable government officials to identify and locate tampering events, track shipping containers, and communicate alarm data securely and reliably.

*Advanced Container Security Device (ACSD) Project* – Develops an advanced sensor system for monitoring containers’ integrity from the point-of-consolidation to the point-of-deconsolidation in the maritime supply chain. The ACSD is a small unit that attaches to the inside of a container to monitor all six sides and report any intrusion, door opening, or human cargo. If ACSD detects an intrusion, breach, door opening, or human, it transmits alarm information through the Marine Asset Tag Tracking System (MATTS) to CBP. In FY 2009, the project performed test and evaluation of prototype systems. In FY 2010, the project will remedy shortfalls discovered during prototype testing and integrate system improvements. In FY 2011, the project plans to conduct final field-testing.

*Advanced Screening and Targeting (ASAT) Project / Project Screen* – Provides next-generation risk assessment and targeting tools for inbound containers to CBP and DHS Policy’s need to enhance the Department’s risk assessment capability. In FY 2009, the project initiated a requirements analysis for advanced computer algorithms and software to collect data from a broad spectrum of sources and combined/analyzed shipping information to find suspicious relationships and patterns. In FY 2010, the project will perform an evaluation of pattern analysis tools. In FY 2011, the project plans to initiate core-system implementation; develop advanced analytic software for CBP; and initiate a beta test of advanced analytic software modules.

*Air Cargo Composite Container Project* – Expands upon the Hybrid Composite Container Project and develops an Air Unit Load Device (Air ULD). The Air ULD will detect and communicate intrusions through any of its sides during transit in the air-cargo supply chain. In FY 2009, the project completed an analysis of requirements. In FY 2010, the project will complete security-sensor system development and structural system design and weight optimization. The project will also field-test and demonstrate an air cargo composite container. In FY 2011, the project plans to deliver final Air ULD product specifications to TSA.

*Automated Target Recognition (ATR) Project* – Develops an automated imagery detection capability for anomalous content (e.g., persons, hidden compartments, contraband) for maritime, land, and air cargo to enhance or augment existing and future non-intrusive inspection (NII) systems. ATR is broadly applicable to scanning and imaging systems used by CBP and TSA, providing an operator-assisted decision aid for target discrimination in low-resolution images. Further, the project will be scalable to accommodate future NII systems with higher resolution imagery and material-discrimination capability. In FY 2010, the project will develop and finalize requirements, conduct business planning, and perform concept studies and analysis of alternatives. In FY 2011, the project plans to initiate system design.

*CanScan Project* – Develops a next-generation, NII system to detect terrorist materials, contraband items (e.g., drugs, currency, illegal firearms), or humans at border crossings and ports of entry. The new system will provide increased penetration, resolution, and throughput compared to current capabilities for scanning containerized cargo. The system will incorporate technologies that will provide elemental material identification and/or material composition. In FY 2009, the project performed requirements analysis

and initiated concept studies and an analysis of alternatives. In FY 2010, the project will initiate concept selection and system design. Also in FY 2010, the project will integrate the technology developed under the ATR project to enhance the quality of scanned images produced by CanScan. In FY 2011, the project plans to develop the CanScan NII prototype.

*Container Security Device (CSD) Project* – Develops a security device with sensor(s) that can detect the opening of container doors from the point-of-consolidation to the point-of-deconsolidation in the maritime supply chain. The CSD will provide an interim capability to monitor the status of container doors until the ACSD is available. The CSD is a small, low-cost device mounted on or within a container that can detect the opening or removal of container doors and reports its status to CBP. In FY 2009, the project operationally tested the CSDs. In FY 2010, the project will remedy shortfalls discovered during prototype testing, integrate systems improvements, and deliver improved prototypes for future field-testing. In FY 2011, the project plans to deliver the CSD product specifications to CBP and DHS Policy. These specifications will be open performance standards based on potential commercial devices for any vendor to build and make available to users.

*Hybrid Composite Container Project* – Develops an International Standards Organization (ISO) composite shipping container with embedded security sensors. The sensors detect intrusions from the point-of-consolidation to the point-of-deconsolidation in any global maritime supply chain. This technology yields several potential benefits for the shipping industry beyond cargo security. Composite containers are stronger than current steel shipping containers and are 10-15 percent lighter. Weight savings benefit shippers by allowing them to load more goods per container. Composite containers are also easier to repair, which decreases life-cycle costs. In FY 2009, the project successfully built one full-size ISO-compliant, composite container prototype that passed ISO structural testing (this is an important step towards gaining acceptance by the shipping industry). In FY 2010 and FY 2011, the project plans to test and evaluate the manufactured prototype against operating conditions.

*Secure Carton Project* – Develops technology to detect tampering to a shipping carton from the point-of-packing to the point-of-delivery in the supply chain. This project improves the supply chain visibility and the integrity of the chain of custody. In FY 2009, the project conducted testing in an air cargo environment. In FY 2010, the project will address system deficiencies noted during previous testing and add design improvements. In FY 2011, the project plans to deliver final Secure Carton product specifications to TSA.

*Secure Wrap Project* – Provides a transparent, flexible, and tamper-indicative wrapping material to secure and monitor palletized cargo in the land, maritime, and air-cargo supply chains after it leaves the point-of-packing to the point-of-delivery. This project improves supply-chain visibility and the integrity of the chain of custody. In FY 2009, the project completed the feasibility study and prototype design. In FY 2010, the project

will deliver samples for developmental testing in the supply chain. In FY 2011, the project plans to conduct field-testing of Secure Wrap prototypes.

2011 Program Change	-	-	(7,188)
<b>2011 Total President's Budget</b>	-	-	<b>200,863</b>
Total Change 2010 to 2011	-	-	(5,937)

The Science and Technology (S&T) Directorate requests \$200.863 million for the Chemical and Biological Division; of this amount, \$5.022 million supports the Small Business Innovative Research (SBIR) program. The FY 2011 request reflects a reduction of \$5.937 million due to the funding of higher priority items within the Department.

This reduction will reduce support provided to the Office of Health Affairs' (OHA) operation for the National BioSurveillance Integration System (NBIS) project. The reduction will delay prototype development for the Next-Generation Biological Detection project. The reduction will also eliminate the Economic Supply Chain project. These projects fill capability gaps identified by Chemical and Biological customer components of the Capstone Integrated Product Team (IPT).

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Chemical and Biological Division works to increase the Nation's preparedness against chemical and biological threats through improved threat awareness; advanced surveillance and detection; and responsive countermeasures. Program priorities are risk-based. The IPT process identifies high-priority customer capability.

**Biological Countermeasures Thrust Area** – The Biological Defense Thrust encompasses risk-based, biological threat countermeasure development programs including threat characterization, development, and transition of new and improved technologies, strategies, and procedures. These programs support multi-layered defense

capabilities that address intentional, accidental, or natural introduction of biological agents presenting a threat against the Nation's human population or infrastructure sufficient to affect national security. This thrust covers hazards to the population through inhalation, dermal exposure, and ingestion of biological threats.

This thrust area addresses Homeland Security Presidential Directives (HSPD) 9, 10, and 18. HSPD-10, *Biodefense Strategy for the 21<sup>st</sup> Century*, provides a comprehensive framework for our Nation's biodefense. HSPD-9, *Defense of United States Agriculture and Food*, establishes a national policy to defend the agriculture and food system against terrorist attacks, major disasters, and other emergencies. HSPD-18, *Medical Countermeasures against Weapons of Mass Destruction*, establishes policy for the acquisition of medical countermeasures against weapons of mass destruction. This thrust area consists of five main programs: Systems Studies and Decision Support Tools; Threat Awareness; Surveillance and Detection Research and Development; Forensics; and Response and Restoration.

***Systems Studies and Decision Tools Program*** – FY 2010: \$7.306 million; FY 2011 estimate: \$6.574 million. Conducts system studies and net assessments to identify and assess effective measures for deterrence, detection, and mitigation of biological terrorism acts against the U.S. population and infrastructure. This program provides the analysis and tools that help refine requirements for program execution within the Chemical and Biological Division. A portion of this work supports system design and tradeoffs to develop requirements for future systems. Federal, State, and local emergency responders will use tools developed in this area. Key partners and customers include; the Office of Health Affairs (OHA), the Interagency Modeling and Atmospheric Assessment Center (IMAAC), Office of Infrastructure Protection (OIP), U.S. Secret Service (USSS), Transportation Safety Administration (TSA), and the U.S. Department of Agriculture (USDA).

***Biodefense Net Assessments Project*** – Conducts net assessments of this Nation's overall biodefense strategy every four years to provide “...*recommendations for re-balancing and refining investments among the pillars of our overall biodefense policy*” as required in HSPD-10. In FY 2009, the project initiated a new cycle of biodefense analysis, targeting the five to 20-year future timeframe. The project convened a new executive review panel (ERP) and conducted several workshops to inform perspectives. In FY 2010, the ERP will refine and assign high-priority questions and issues in future biodefense to a group of experts for detailed analysis. In FY 2011, the ERP plans to review preliminary results from the working experts. ERP feedback will refine the results to ensure convergence on the issues assigned.

***Decision Support Tools Project*** – Develops fully integrated operational tools for surveillance, detection, incident characterization, and response systems, including improved models of transportation systems and their associated response options and concepts of operations (CONOPS) for chemical and biological attacks. These tools provide architecture design and operational response capability for detection, incident characterization, response, and training simulations. Starting in FY 2009, the project

transitioned tools and data to IMAAC to provide real-time, high-resolution meteorological data feeds from existing National Oceanic and Atmospheric Administration (NOAA) radars deployed across the Nation to enhance IMAAC's current hazard-prediction capabilities. The project extended its Washington, DC, subway system tracer studies to Boston in order to further support subway model validation and support architecture analysis for detection, incident characterization, and response systems for the transit sector. The project used real-world data gathered from these tracer releases to support the validation of subway models. The project also developed an algorithm for IMAAC and TSA to understand transport of dense gases better. In FY 2010, the project will initiate the integration of chemical and biological (CB) transport and health effects modules into USSS training tools to support their operational training. In FY 2011, the project plans to support algorithm development to improve real-time chemical and biological detection systems in indoor transit systems based on on-going subway and indoor transit analysis.

*System Studies Project* – Performs studies that use reference scenarios to assess the capability of the Nation's current biodefense posture, identify critical gaps, perform cost-benefit tradeoffs of different options for addressing those gaps, and inform guidance and CONOPS. Internal DHS customers use the results of system studies to help coordinate DHS-led biodefense for the Nation. For example, OHA uses study results to support operation of the third-generation (Gen 3) BioWatch system. In FY 2009, the project shifted its focus from detect-to-warn systems to detect-to-protect systems supporting indoor facility/critical infrastructure protective architectures, and their CONOPS. In FY 2010, the project will perform a preliminary architecture analysis of food systems for defending against biological threats. This analysis will lay the foundation for prioritizing future studies in this sector. In FY 2011, the project plans to use the results from the preliminary analysis to identify high-level requirements for prioritized countermeasures identified in the architecture analysis.

***Threat Awareness Program*** – FY 2010: \$40.062 million; FY 2011 estimate: \$41.048 million. Characterizes threats posed by biological weapons, anticipates future threats, and conducts comprehensive threat and risk assessments to guide prioritization of the Nation's biodefense investments. The *Project BioShield Act of 2004* launched an effort to develop, acquire, and stockpile effective medical countermeasures to protect Americans against attack by chemical, biological, radiological, or nuclear weapons. It assigned DHS the lead in conducting threat analyses to determine what constitutes a significant material threat to public health and national security. The primary deliverable is an intelligence-informed, scientific characterization and prioritization of bio-terrorist threats and risks to the Nation. DHS components, including; OHA, the National Security Council (NSC), and other agencies such as the Department of Health and Human Services (HHS), Environmental Protection Agency (EPA), USDA, and the Intelligence community will use this deliverable to support their efforts in enhancing the Nation's biodefense. The Threat Awareness Program contains two main project areas: the Biological Threat Characterization Center (BTCC) and the Biodefense Knowledge Center (BKC).

*Biological Threat Characterization Center (BTCC) Project* – Conducts two major activities: 1) biennial, systematic end-to-end risk assessments on both traditional and advanced biological agents, known as Bioterrorism Risk Assessments (BTRA); and 2) laboratory studies to close major scientific gaps to further refine our understanding of the risk and threat posed by these agents.

The BTRA, required under HSPD-10, drives the focus of the analytical studies. The BTRA provides the basis for risk-informed investments for National strategic biodefense planning, while identifying key knowledge gaps and defining critical vulnerabilities. Through thorough analyses, the BTRA assesses the likelihood and consequence of biological attacks. The process focuses on the acquisition and production of an agent, its dissemination in a broad range of scenarios, and the human health and economic impacts of those attacks. The resulting information helps to prioritize the risks posed by various agents, to identify vulnerabilities, and to identify associated major scientific knowledge gaps. This guides investments in biodefense and permits the U.S. to develop effective biodefense capabilities in the face of limited resources. The risk assessment will include stakeholder-driven, focused sensitivity studies to evaluate the impact of possible mitigations to bioterrorism.

In FY 2009, the project focused activities on the BTRA and the Integrated CBRN (iCBRN) Risk Assessments (RA), which enables concurrent analysis of chemical, biological, radiological, and nuclear threats and is due in 2010. These activities included improved assessment of the intelligent adversary, simplified modeling tools and scenario-specific analyses that allow a greater range of ‘what if’ exercises, and inclusion of direct and indirect economic effects for all the threats. In FY 2010, the project will deliver the third BTRA and the second iCBRN RA reports and tools. These reports will include enhanced and advanced agents and a prototype desktop tool (BTRA Consequence Calculator Interface). In FY 2011, the project plans to expand the second iCBRN RA report, and the use of the BTRA Consequence Calculator Interface to provide additional decision support.

The BTCC also conducts laboratory studies that help to answer key knowledge gaps identified in the BTRA and reduces uncertainties associated with biological agents of interest. In FY 2009, the BTCC addressed key knowledge gaps on high-priority traditional threat agents. In FY 2010, the BTCC will continue to address knowledge gaps on traditional agents to reduce the uncertainties in the BTRA, and will evaluate feasible advanced biological threat agents. In FY 2011, the BTCC plans to continue to perform laboratory-based research to supply crucial data for the BTRA. This will include analysis of antibiotic resistant *Bacillus anthracis* and its impact on current therapies. This analysis will address requirements for the Biomedical Advanced Research and Development Authority to develop medical countermeasures for the Strategic National Stockpile.

*Biodefense Knowledge Center (BKC)* – Provides multiple levels of analysis of biological threats to DHS and other Federal agencies – including 24/7 science and technology reachback for the DHS National Operations Center (NOC) and other stakeholders, as well as tailored assessments and in-depth analyses of biodefense issues and

biotechnologies. For example, Awareness Bulletins provide information to analysts and decision makers about technologies used for peaceful or, with a little alteration, nefarious ends. Population Threat Assessments (PTAs) provide an estimate of the number of people exposed to different dose levels of an agent in plausible high-consequence scenarios. HHS depends on these assessments to inform its health effects modeling to define requirements for new medical countermeasures. In addition, in its Biodefense Knowledge Management System (BKMS), the BKC develops and supports knowledge discovery tools for data integration, analysis, and understanding, as well as software pilots for DHS customers to rapidly characterize and understand biological threats. In FY 2009, the BKC improved BKMS to provide enhanced analysis capabilities and additional curated data sources as well as BKC-produced documents. In FY 2010, the BKC will link the BKMS to the new, Office of the Director of National Intelligence (ODNI)-sponsored knowledge management tool Analytic Space. In FY 2011, the program plans to use the BKMS to conduct an operational genomic data-monitoring pilot. Throughout, BKC will continue to provide 24/7 operational support and technology assessments such as Awareness Bulletins.

In addition to the ongoing activities described above, in FY 2009 BKC also provided an improved Biodefense Knowledge Management System (BKMS) with enhanced analysis capabilities and additional curated data sources as well as BKC-produced documents. In FY 2010, BKC will continue to provide 24/7 operational support, awareness bulletins, and technology assessments. BKC will enable BKMS to link to the new, Office of the Director of National Intelligence (ODNI)-sponsored knowledge management tool Analytic Space. In FY 2011, the program plans to use BKMS to conduct an operational genomic data monitoring pilot, and will continue to provide 24/7 support, awareness bulletins, and technology assessments.

*Food Defense Basic Research Project* – Performs fundamental basic research through the Food Protection and Defense National Center of Excellence that addresses agent/matrix interactions and the resulting implications for contaminant viability, detection, decontamination, and disposal. In FY 2009, the project enhanced fundamental knowledge of select agent interaction in complex food matrices and expanded capabilities in the areas of rapid detection and characterization. In FY 2010, the project will explore new concepts and approaches to prevent, respond to, or recover from the intentional contamination or disruption of the Nation's complex food system. In FY 2011, the project plans to develop promising new concepts and approaches to prevent, respond to, or recover from the intentional contamination or disruption of the Nation's complex food system along with continuing ongoing R&D activities to support critical priorities.

*Surveillance and Detection R&D Program* – FY 2010: \$42.404 million; FY 2011 estimate: \$42.088 million. Develops next-generation detectors for biological threat agents, including fully autonomous detection capabilities for the next-generation BioWatch systems. These detectors will operate with lower costs and faster detection times – significantly increasing the portion of the U.S. population protected. This program is also developing detect-to-protect systems specifically for use indoors. Key partners and customers include DHS components - OHA, OIP, USSS, Customs and

Border Protection (CBP), U.S. Coast Guard (USCG), Intelligence and Analysis (I&A) in addition to agencies such as HHS, TSA, EPA, the Central Intelligence Agency (CIA), Federal Emergency Management Agency (FEMA), Armed Forces Medical Intelligence Center (AFMIC), USDA, State agencies, and local agencies.

*Bioassay - Near Term Project* – Develops assays (specific fingerprint signatures of biological agents) employed within detectors to recognize biological agents in order to support the Integrated Consortium of Laboratory Network (ICLN) for event detection, characterization, and mitigation. The project also provides bioinformatics resources and nucleic-acid signatures for use on commercial instruments. This effort develops Public Health Actionable Assays (PHAA) used in U.S. Government-deployed systems to provide extremely high-confidence information to support public-health related decisions. These government-specific operational assays enable Generation 2 and Generation 3 BioWatch to detect the top tier, or highest priority aerosolized biological threats, identified in the 2008 BTRA, as well as aid in event characterization upon an attack. This project is also establishing a mechanism to independently evaluate and validate Public Safety Actionable Assays (PSAA) for first responders and the private sector. In FY 2009, the project transitioned 10 potential biothreat agent-specific assays to the CDC Lab Response Network (LRN) to support of the National Biomonitoring Architecture (NBMA). In addition, in FY 2009, the project initiated transition of the Signature Erosion Analysis Report to Centers for Disease Control and Prevention (CDC) to support the continuous evaluation of current assays for robustness and integrity. In addition to the above detection assays, this project is also actively involved in the development of Rapid Antimicrobial Susceptibility assays to support medical countermeasure distribution and dispensation. In FY 2010, the project will deliver the Signature Erosion Analysis Report to CDC. In FY 2010, the project also will transition additional Gen 3 BioWatch characterized assays to CDC, to support the Gen 3 BioWatch program. Also in FY 2010, this project will transition the Rapid Antimicrobial Susceptibility Assay to CDC LRN for implementation and deployment to all 163 LRN laboratories. This will allow the laboratories to rapidly assess the sensitivity of the biothreat agent to medical countermeasure supporting decision making for distribution and dispensation of appropriate post-exposure prophylaxis. In FY 2011, the project plans to transition the PSAA process to establish initial operational capability, transition the top 20 evaluated biothreat assays for Gen 3 BioWatch to OHA, and develop and transition replacement nucleic-acid detection assays for assays that have “eroded” (based on updated bioinformatics information and tools). In FY 2011, the project also plans to develop and transition assays for biothreat agents as identified by the 2010 BTRA.

In addition to nucleic acid based detection assays, this project also develops immunological assays (multiplexed and enzymed-linked immunosorbant assay (ELISA)) for the detection of biological toxins and antigens and confirmatory assays in support of the National BioMonitoring Architecture (NBMA). These assays will transition to CDC for continuous support of event detection, event characterization, and event mitigation. In FY 2010, this project will transition Rapid Ricin toxin and Botulinum neuro-toxin, sero-type specific assays to CDC LRN. In FY 2011, this project plans to continue to develop highly robust immunologically based antigen and toxin detection assays of the

top biothreat agents for octagonal-based testing. In addition to the assay development effort, this project will support the establishment of enduring capabilities such as sequencing newly identified biothreat agents and understanding strain diversity to support a robust bioinformatics program. This is highly critical for assay developmental effort and signature erosion analysis. This effort ensures that previously developed and employed assays maintain their robustness and integrity to support the National Biomonitoring Architecture. The second enduring capability establishes a DHS repository containing biological materials to support assay evaluation and validation efforts, e.g., BioWatch-Bioplex, Generation-3 BioWatch, Public Health Actionable Assay (PHAA), Public Safety Actionable Assays (PSAA), and Pipeline Assays. The test and evaluation of the immunological assays (toxins) will begin in FY 2010, and continue as assays are developed into FY 2011 with supporting validation testing as agreed upon by Federal partners, such as CDC.

*BioAssays – Next Generation Basic Research Project* – Evaluates and develops new approaches for detecting the broad range of future threats including enhanced, advanced and emerging threats. This project addresses the need for a highly robust multiplexed assay chemistry that will allow the Nation to screen and monitor for multiple pathogens from a single sample at a reduced cost. This will encompass nucleic-acid-based detection, non-antibody-based antigen detection, and exploration of other novel approaches to support the rapid detection of biological agents of interest. This project also evaluates and develops highly robust sample preparation and processing chemistry to support detection. In FY 2009, this project initiated multiple research efforts aimed at identifying the most promising approach for detecting a broad range of future threats. In FY 2010, this project will continue to evaluate potential candidates and associated chemistries to support future needs for biodetection and monitoring. In FY 2010, this project also will evaluate novel approaches to address enhanced (antibiotic resistance) and advanced threats (genetically modified or engineered threats). In FY 2011, this project plans to evaluate novel approaches to emerging threats and optimize the strategy for incorporation of promising candidate assay chemistries for Next Gen Biodetection and BioAssays – Near Term projects.

*Detect to Protect (DtP): Remote Sensors and Triggers and Confirmers Projects* – Develops low-cost, bio-aerosol sensors and triggers to detect biological agents within one minute (acting as reliable ‘bio smoke alarms’) to protect high-value facilities and their occupants. This project will provide commercially available detection systems that could enable transportation, entertainment, and other high-value facilities to monitor for airborne hazards and take low-regret precautions (e.g., turning off ventilation systems) to protect people by preventing mass exposure. In FY 2009, this project completed the final round of prototype evaluations in operational environments.

*National BioSurveillance Integration System (NBIS) Support Project* – Provides decision makers early identification of biological events of national significance, such as disease outbreaks, the potential use of biological agents, and emerging biohazards. The S&T Directorate supports OHA’s operation of NBIS by providing subject matter expertise and developing modeling tools. NBIS acquires, integrates, analyzes, and disseminates

information from existing human disease, food, agriculture, water, meteorological, and environmental surveillance systems and relevant threat and intelligence information. NBIS is currently developing a robust, domestic system that will assist with biosurveillance and provide a core, permanent, open-source biosurveillance capability. This project significantly improves information sharing and situational awareness for decision-makers and provides a common operating picture for all participating agencies to enable a timely response to biological events. In FY 2009, the project supported model development for the Biosurveillance Common Operating Picture (BCOP) and continued to provide subject-matter-expert support in bioinformatics and information technology systems. In FY 2010, the project will fully transition model development and platform enhancements that support an operational NBIS capability to NBIC.

*Next-Gen Biological Detection Project* – Develops technology to accurately detect the presence of a traditional biothreat agent, provides characterization of that pathogen for its virulence, and determines if the agent has been enhanced to defeat medical countermeasures, provides a rough quantification of the amount of that agent, and preserves samples for further analysis. The system should additionally provide advance warning or indication of potential advanced threat agents that have been genetically engineered to defeat detection. In basic research, the project evaluates existing technology as well as explores and develops new technology for potential application and development of the Next-Generation Biodetection technology in support of the National BioMonitoring Architecture. This project will have the potential to address enhanced, emerging, and advanced biological threats and will explore universal detection technologies (existing, developmental, and emerging). Basic research efforts will explore these technologies for compatibility and potential through spiral development of an automated, fully integrated, end-to-end (collection, identification, and reporting) system. This project will both draw on and inform the BioAssay – Next Generation project described above. The Next-Generation Detection project began in FY 2009 as a solicitation of fundamental research to evaluate technical feasibility. In FY 2010, the project will continue its basic research, focusing on the exploration of more promising concepts encompassing sample capture, sample processing, and agent detection and characterization. In FY 2011, the project plans to complete component exploration in research and initiate transition phase with development of requirements in concert with user.

*Portable Bio Detector Project* – Develops a hand-held biological detector/identifier in a spiral development process, beginning with a target to classify unknown samples as potential biological threats and culminating in approaches that identify agents (at species level) across an array of known agents. Target users are Customs and Border agents and First Responders. In FY 2009, the project delivered several trade studies to assess the requirements of customers. In addition, based on the trade studies, a technology assessment explored current technologies and determined the best path forward. In FY 2010, the project will identify technology solutions for the rapid, on-site discrimination of potential biological agents and initiate development of CONOPS for these technologies in target application environments. In FY 2011, the project plans to conduct feasibility tests of the promising solutions.

*Viabile Bioparticle Capture Project* – Develops an automated sampler that is compatible with laboratory analysis, sealed for safe handling of potential infectious agents, and capable of preserving sample viability for multiple days. The final system will augment BioWatch information by 1) allowing characterization of the viability of a threat during an attack; 2) supporting antimicrobial susceptibility testing; 3) implementing orthogonal testing (using other assay chemistry for additional verification or characterization) as needed, and 4) enabling more definitive post-event characterization of bioterrorist events. In FY 2009, the project solicited technology concepts and selected performers. In FY 2010, the project will demonstrate the feasibility of selected concepts and components through laboratory tests. In FY 2011, the project plans to test collectors for their ability to maintain viability of pathogens collected as aerosols. The project will deliver and transition the prototype to OHA.

*Multi-Application Multiplex Technology Platform Project* – Develops a multiplex technology platform that will allow an end user to screen for multiple pathogens from a single sample, and provide a user-friendly concept for multi-agency application where assay cartridges may be changed, based upon facility-or agency-specific needs. The project will ensure that different assay cartridges are validated for use by specific agencies. During surveillance operation mode, each agency will use their specific assays/cartridges for their intended application and use. In the event of a bio attack, this facilitates assay cartridge delivery to support agencies that have the same platform to provide surge-capacity support for event mitigation. As the detection science and technology matures, the Multi-Application Multiplex Technology Platform will test for traditional agents, enhanced agents, emerging agents, and advanced agents, performing up to 100 tests or detecting 100 targets simultaneously within a single sample. In FY 2010, the project will conduct a technology feasibility assessment. In FY 2011, the project plans to deliver a prototype for capability demonstration.

*In-Line Food Monitoring Device (formerly Rapid Test Methods for High Volume Analysis project)* – Identifies key areas for improvement in laboratory analytical methods for high-throughput and on-site analysis of suspect food products. The project will investigate contamination, including chemical, biological, and radiological contaminants that pose high risk to the American public or economy by undermining the safety of the agriculture/food infrastructure and supply. Investment in this area will enable more rapid detection of food contamination; provide prompt assessment of the scope of risk presented during a food-contamination incident; support enhanced ability for epidemiological trace-back investigations, and will minimize the impact of food contamination events on both public safety and the economy. In FY 2010, the project will develop a systems study report identifying the highest leveraged investments. In FY 2011, the project plans to refine requirements and initiate concept development.

**Forensics Program** – FY 2010: \$28.348 million; FY 2011 estimate: \$29.265 million. Operates the National BioForensics and Analysis Center (NBFAC) and conducts bioforensics research supporting criminal investigative cases, with the ultimate goal of attribution, apprehension, and prosecution of the perpetrator to fulfill the mission

established by HSPD–10. These activities provide facilities, tools (e.g., assays, protocols, and strain libraries), analyses, and rigorous chain-of-custody controls needed to support the Federal Bureau of Investigation (FBI) and others in their investigation of potential biocrimes or acts of bioterrorism. NBFAC analyzes a large number of samples for the FBI and other national security partners in secure, contamination-free, biocontainment laboratories. Other key customers include DHS components such as CBP, USSS, and OHA.

*National BioForensics Operations (NBFAC) Project* – Provides the Nation with a unique capability to conduct forensic analysis of evidence from biocrimes or bioterrorism. This helps prevent and deter biocrimes and terrorism by providing unimpeachable data for attribution. As designated in HSPD-10, NBFAC is the Nation’s lead facility for technical analysis of samples from potential biocrimes or bioterrorism. As an operational facility, NBFAC provides secure, state-of-the-art, contamination-free, biocontainment space for the analysis of evidentiary material and validated protocols for the biological, chemical, and physical “fingerprints” that those samples may contain. The NBFAC also provides rigorous chain-of-custody and quality-control procedures to ensure the integrity of the sample and its analysis in addition to spoke laboratories to provide specialized capabilities.

The NBFAC plans to continue to provide scientific analysis and support to the FBI to analyze biological threat evidence. In FY 2009, NBFAC expanded capability by increasing the number of assays that are ISO 17025 accredited and ISO validated. Also in FY 2009, the NBFAC maintained continuous hub-and-spoke operations and conducted casework. In FY 2010, the project will ISO accredit the casework labs in the NBACC building. The project also will complete capability expansion to include 30 top bioterror agents in FY 2010. In FY 2011, the NBFAC plans to initiate the verification and validation of bioforensic assays for genetically modified organisms, as well as for enhanced and engineered threats. In FY 2011, the NBFAC also plans to continue to maintain continuous operational in-house availability for casework, and have hub-and-spoke operations on call as required.

*Bioforensics R&D - Near-Term & Long-Term Projects* – Develops improved methods for extracting genetic materials and proteins from samples for biological, chemical, and physical characterization. Provides scientific foundation for material attribution, develops protocols for characterization and identification of Biological Threat Agents (BTAs), and develops a robust sample management, molecular signatures, and physical/chemical analysis research program to address FBI/NBFAC requirements. Bioforensics R&D – Near-Term provides NBFAC with tools to analyze the CDC Category A and B biological threat agents of concern and methods for analyzing enhanced and engineered threats. Bioforensics – Long-Term advances forensic science, establishes an inter-disciplinary approach to the Bioforensics problem, and engages academia in basic scientific research that supports bioforensics technological gaps. In FY 2009, the project provided identification and drill-down capabilities for the Category B agents (excluding viruses). The project also initiated improved genotyping schemes for Category A viral agents, with emphasis on smallpox (variola major) and viral

hemorrhagic fevers. In FY 2009, the project launched a viral genetic stability study on all Category A and B viruses to identify knowledge gaps in viral population genetics and the requirements for match criteria in viral samples. In FY 2010, the program will initiate phase two of the bacterial population genetics study, focusing on laboratory experiments to close knowledge gaps and provide insight to improving match criteria between samples. In FY 2010, the program also will initiate a study to determine knowledge/capability gaps for culturing trace amounts of fastidious select agent bacteria. Furthermore, the project will begin planning for new molecular markers/genotyping or whole genome sequencing methods to identify enhanced and advanced threats rapidly. In FY 2011, and beyond, the project plans to identify strategies for analyzing emerging and advanced threat agents.

***Response and Restoration Program*** – FY 2010: \$6.849 million; FY 2011 estimate: \$8.219 million. Provides advanced planning, develops CONOPS, and funds exercises and training for responding to and recovering from large-scale biological attacks. Biological agents have the potential to contaminate large portions of a city, covering multiple city blocks and the facilities therein. This project will provide a more rapid and cost-effective post-attack cleanup and restoration by developing a systems approach for the restoration of citywide areas. Restoration demonstrations, which bring together Federal, State, and local partners to develop, test, and then share the CONOPS for key scenarios, are at the heart of this approach. The S&T Directorate partners with EPA, OIP, the Department of Defense (DOD), TSA, the Occupational Safety and Health Administration (OSHA), and the State and local public health and response communities.

*Systems Approaches for Restoration Project* – Develops a coordinated systems approach to the restoration of wide urban areas, to include high-traffic areas (transit/transportation facilities) and DOD infrastructures, following the aerosol release of a biological agent. Prior activities focused on guidelines and protocols for protecting and restoring airports and other critical transportation hubs (e.g., subways). The S&T Directorate is now focusing on restoring wide urban areas, like city neighborhoods, following a biological attack using the Interagency Biological Restoration Demonstration (IBRD), in collaboration with DOD's Defense Threat Reduction Agency (DTRA) and in partnership with the EPA, HHS, Seattle, and county authorities and agencies. When completed, IBRD will provide a set of concepts, protocols, and tools that other communities can adopt and modify to develop their restoration plans. In FY 2009, the project conducted an exercise and demonstration of wide-area decontamination methods and restoration system tools. The project also developed a Seattle Urban Area (SUA) specific plan. In FY 2010, the project will perform final exercises and demonstrations through a series of tabletops, field exercises, and workshops for the SUA plan. In FY 2011, the project plans to extend wide-area restoration guidance and demonstration results from prior years' efforts nationally.

*Operational Tools for Response and Restoration Project*– Develops a suite of state-of-the-science indoor-outdoor predictive tools to characterize the extent and degree of contamination, incorporating the best-available deposition, degradation, and surface viability data. This project will provide validated interagency sampling plans and

improved statistical sampling design to support characterization and decontamination planning. In FY 2009, this project delivered an initial decision tool to support event mitigation and characterization. In FY 2010, this project will initiate the development of sampling design/plan tools and validate a sampling plan design for anthrax. Also in FY 2010, the project will create and finalize Responder Guidance for sampling suspicious materials. In FY 2011, the project plans to continue to develop sampling design/plan tools as well as operationally test the available sampling plans and tools.

**Agriculture Thrust Area** – The Agricultural Defense mission is to enhance current capabilities and develop state-of-the-art countermeasures for high-consequence foreign animal diseases consistent with the roles and responsibilities articulated in *Defense of United States Agriculture and Food* (Homeland Security Presidential Directive, HSPD-9). This includes near- and long-term research and development for vaccines and diagnostics, in coordination with internal and external stakeholders.

**Foreign Animal Diseases Program** – FY 2010: \$24.237; FY 2011 estimate: \$27.561 million. Develops next-generation veterinary vaccines and other countermeasures in partnership with the USDA to protect against natural and/or intentional introduction of high-consequence foreign animal diseases (FAD), and develops models and simulations of the spread of FADs, and their economic impact, to evaluate control and response strategies. In addition to the USDA, key customers include the National Veterinary Stockpile (NVS), the National Animal Health Laboratory Network (NAHLN), the NSC, OHA, and CBP.

**Ag Screening Tools Project** – Develops portable protocols and tools that provide minimally trained users' assistance in sampling (e.g., maritime containers and unprocessed samples), rapid detection, and field identification of illegal product, high-consequence pathogens, and toxins that threaten U.S. agriculture and the food industry. Starting in FY 2010, the project will identify and prioritize stakeholder needs for protocols, screening, and inspection tools, as well as develop a strategy to address their needs. In FY 2011, the project plans to formulate concept of operations to address user needs.

**Foreign Animal Disease (FAD) Modeling Project** – Supports the development and use of national-scale FAD simulation and modeling to provide inter-agency partners and analysts with platforms to explore control strategies for FAD outbreaks at multiple scales, and to support S&T Directorate strategic planning and the formulation of countermeasure requirements.

Initially focused on foot-and-mouth disease (FMD), the S&T Directorate has worked with USDA partners since FY 2006 on the use of Multi-scale Epidemiologic and Economic Simulation Analysis (MESA) to examine scenarios for FMD and Highly Pathogenic Avian Influenza (HPAI). In FY 2009, with USDA Animal and Plant Health Inspection Service (APHIS), the project used multiple epidemiological and economic simulations and models to populate a scenario database to support planning and analysis for select high-consequence FADs, such as FMD and HPAI. In FY 2009, the Research

and Policy for Infectious Disease Dynamics (RAPIDD) program initiated efforts to address modeling hierarchy and validation as well as the modeling of zoonotic diseases, which will culminate in FY 2010. These are two centrally linked questions in the implementation and efficient use of infectious disease models. Also in FY 2009, with USDA APHIS, the project leveraged RAPIDD insights, as well as the shared experience of DHS and USDA analysts, to enhance collective understanding of the requirements and necessary verification and validation for the models and simulations used for strategic planning and reach-back support for policy and decision makers. This collaborative effort will continue in 2010. During FY 2009, DHS and USDA began working together to perform a technical review on the national scale MESA model. This FY 2010 effort will document the model development and will expand by initiating a similar analysis of the regional scale North American Animal Disease Spread Model (NADDSM) model and an analysis of the requirements to build a national scale NADDSM. In FY 2011, the project plans to work with inter-agency partners to develop methods of model verification and validation required for the use of multiple epidemiological and economic models and simulations to support inter-agency cooperation on analysis of national-scale FAD scenarios. In FY 2011, the project also plans to complete final reports and peer-reviewed publications from initial RAPIDD Working Groups on high-priority knowledge and capability gaps.

*FAD Vaccine and Diagnostics – Near- & Long- Term Projects* – Develops vaccines and biotherapeutics for high-priority FAD pathogens, with the goal of providing vaccines that are more effective to differentiate infected from vaccinated animals (DIVA). DIVA vaccines cause an animal to develop protective antibodies that can be differentiated from antibodies that are associated with the presence of disease or infection. Ultimately, DIVA vaccines will allow vaccination of animals against a disease without the fear that, once vaccinated, healthy animals will test positive for disease due to the presence of protective antibodies in their bloodstream. This project will additionally research vaccines for FADs for which no vaccine exists. In FY 2009, the project determined how quickly the next generation of serotype-specific FMD vaccines provides immunity, and how long the immunity lasts. The project also delivered proof-of-concept studies using different vaccine and biotherapeutic countermeasure platforms for other non-FMD FADs. In FY 2010, the project will complete all regulatory testing requirements for the first next-generation DIVA vaccine for FMD. In FY 2011, the project plans to complete these requirements for additional serotypes for the next-generation FMD vaccine; coordinate implementation of USDA DIVA assays; safety test commercially available international vaccines (e.g., Argentina’s 4-way vaccine for FMD); conduct research on improving potency and duration of immunity of FMD molecular vaccines; and leverage the knowledge gained to improve other FAD biological countermeasures.

*Agrodefense Basic Research Project* – Performs fundamental basic research and addresses critical knowledge gaps for foreign animal and zoonotic diseases, in collaboration with Federal and academic partners. In FY 2009, the project addressed critical knowledge gaps for high-priority FADs, and assessed the efficacy of detection platforms for select foreign animal and zoonotic diseases. In FY 2010, the project will complete integrated planning of S&T Directorate programs for foreign animal and

zoonotic disease research. In FY 2010-11, the project plans to continue to execute ongoing R&D activities to address critical priorities, to include biotherapeutic discovery in collaboration with Federal and academic partners.

*Joint Ago Defense Office (JADO) Project* – Provides coordination and staff support for the development and maintenance of an integrated interagency R&D strategy for foreign animal disease defense. The National Science and Technology Council (NSTC) Foreign Animal Disease Threat (FADT) subcommittee facilitates the overall inter-agency coordination to better leverage and integrate inter-agency R&D efforts, including programs on veterinary countermeasures, basic research, FAD modeling and depopulation, disposal and decontamination (3D). In FY 2009, the office began to assess strategic R&D opportunities identified by interagency working groups of the FADT Subcommittee. In FY 2010, in coordination with the Subcommittee, the office will support the preparation of an integrated R&D roadmap for FY 2012-2016 and enhance interagency coordination of veterinary countermeasure, basic research, FAD modeling, and 3D programs. In FY 2010, the office will also initiate an assessment of strategic research and development opportunities for the National Bio- and Agro Defense Facility (NBAF). In FY 2011, the project plans to deliver an interim report of the assessment.

**Chemical Countermeasures Thrust Area** –The Chemical Defense thrust conducts risk-based chemical countermeasures development programs that seek to characterize the threat. These programs will develop and transition new and improved prototype technologies, strategies and procedures for the interdiction, detection, response and recovery from use of toxic chemical threat agents in intentional attacks or from major accidental releases that present acute hazards to the health of the Nation’s population. The thrust area’s mission includes consideration of hazards to the population through inhalation, dermal exposure, and ingestion. This thrust area supports the HSPD-22, “*National Domestic Chemical Defense*”, which provides a comprehensive framework for our Nation’s chemical defense. It also supports HSPD-9 and HSPD-18. This thrust area carries out its activities through three main programs: Analysis; Detection; and Response and Recovery.

The S&T Directorate coordinates with interagency partners, such as DOD and EPA, to maximize resources and minimize duplication. While DOD’s program focuses on the battlefield needs, the S&T Directorate’s program actively seeks to incorporate DOD technologies where they have relevant impact against domestic threats. DHS investments provide amplification to EPA’s program to ensure we address major operational gaps in domestic chemical defense. Additional partners and customers include DHS components: OIP, OHA, FEMA, CBP, USSS, USCG, Federal Protective Service (FPS) as well as the following government agencies: DOD, EPA, DHHS, USDA, FBI, ATF, TSA, and State and local entities.

***Analysis Program*** – FY 2010: \$17.737 million; FY 2011 estimate: \$14.264 million. Develops a robust and enduring analytical capability to support chemical countermeasures development. Activities include: 1) developing a fundamental understanding of toxic chemical threat properties and conducting risk and vulnerability assessments based on those properties; 2) developing and sustaining expert reach-back

capabilities to provide rapid support in domestic emergencies; and 3) developing and validating forensic methods and analytical tools, such as chemical signatures that are used to help identify the nature and origin of chemical threats used by terrorists and criminals. In addition, the S&T Directorate supports maintenance of infrastructure, consisting of receipt, laboratory, and storage spaces to accommodate highly toxic chemicals and associated evidence, to provide to support the FBI's chemical terrorism or criminal casework. This includes trained and fully certified scientific and technical staff available to process this type of evidence.

*Chemical Security Analysis Center (CSAC) Project* – Develops and sustains expert reachback capabilities to provide rapid support in domestic emergencies. The CSAC serves as the Nation's first centralized repository of chemical threat information (hazard and characterization data) for analysis of the Nation's vulnerabilities to chemical agent attacks. To ensure a cohesive effort to evaluate threats and countermeasures, CSAC conducts key analytical assessments, such as PTAs, Chemical Terrorism Risk Assessment (CTRA), and Chemical Infrastructure Risk Assessment (CIRA). OIP, OHA, TSA, and I&A are the primary DHS customers for the CSAC. CSAC provides completed PTAs to HHS to fulfill BioShield requirements. The work of CSAC assists the Department and the interagency community with planning for responses to chemical threats. CSAC assesses risk and consequence due to chemical attacks on population and infrastructure. In FY 2009, CSAC defined end-to-end systems studies for OIP and TSA. In FY 2010, CSAC will deliver the chemical agent reactions database (CARD) to DHS I&A. CSAC also will complete and deliver the biennially updated CTRA, which expands the number of chemicals considered in the assessment and incorporates an economic impact model. In FY 2011, the project plans to deliver end-to-end systems studies and Capability Assessments to OIP and TSA, as well as provide S&T Directorate-based 24/7 reach back capability to DHS and other government agencies.

*Chemical Infrastructure Risk Assessment Project* – Develops tools to help assess risk presented by attacks on the chemical industry by identifying and quantifying various infrastructure gaps, vulnerabilities, potential key hazardous chemicals, and associated processes (carried out by CSAC). It also maintains an operational reach-back capability supporting the development of OIP chemical security regulations (Chemical Facility Antiterrorism Standards, CFATS). In FY 2009, the project completed an assessment of chemical dispersion models and downstream impacts from infrastructure disruptions. The project also assessed the potential for safer alternative processes to reduce risk to a select subset of high-volume toxic chemicals. In FY 2010, the project will develop a scenario-driven approach for assessing the hazard of a release from the chemical supply chain as well as develop objectives for improved models. In FY 2011, the project plans to deliver an economic model for chemical facility effects and complete a first probabilistic risk assessment (PRA).

*Large-Scale Chemical Transport Release Modeling Project* – Develops an improved understanding of the consequences of large-volume, hazardous-chemical releases in transport (e.g., rail cars or tankers). In FY 2009, the project conducted a critical assessment of existing dispersion models compared to observations made during and

following releases from rail-car accidents. Previous efforts identified improvements in models that more closely approximate the actual effects of large-scale releases. In FY 2010, the project will develop improved source terms for incorporation into models. In FY 2011, the project plans to test improved source term descriptions and models with laboratory-based experiments to verify model enhancements.

*Increase Safety of Hazardous Chemicals Project* – Develops an understanding and identifies solutions to improve the safety of hazardous chemical formulations for their intended uses. Additionally, the project develops an understanding and scientific basis for alteration in hazardous chemical formulations during transit to minimize overall risk due to accidents or intentional disruption of hazardous materials transport devices. In FY 2010, this project will begin by developing a consensus definition for inherently safer technology among industry, academia, and government. In addition, in FY 2010, the project will review current industry use of hazardous materials and formulations and initiate a study to identify hazardous materials with highest volume use and whose formulations may be changed to increase safety without undermining value to industry and consumer. The project also will assess potential modifications of the most commonly used toxic and explosive chemical formulations to increase their safety during use and transport and minimize implications on cost and effectiveness toward the intended purpose. The project plans to identify hazardous chemical products that can be modified during transport and permit reversion back to original formulation at point-of-distribution or use. In FY 2011, the project plans to conduct a series of workshops with the chemical sector to identify capability gaps and outline a strategy for addressing gaps.

*Chemical Forensics (Chem FP) Project* – Develops and maintains a robust and enduring national capability for the collection, preservation, and processing of chemical threat agents (CTAs) and associated evidence to provide comprehensive and timely forensic analysis and attribution. This effort enables the FBI to conduct investigations of chemical terrorist and criminal acts. CTAs include Chemical Warfare Agents (CWAs) and Toxic Industrial Chemicals/Materials (TICs/TIMs). This capability supports the investigation of terrorist and criminal incidents involving CTAs by enabling their association with people, places, and other events, as well as potential attribution to their original source. The S&T Directorate coordinates similar efforts relative to Non-Traditional Agents (NTAs) with, and conducted by, other agency partners. This information is a critical component of criminal prosecutions and intelligence analysis activities. In FY 2009, the project evaluated chemical forensic analytical methods for several nerve and blister agents, ricin, and TICs, and studied their chemical attribution signatures extracted from an initial set of common materials. In FY 2009, the project also evaluated techniques for the collection, preservation, and analysis of samples recovered at the scenes of chemical incidents. In FY 2010, the project will evaluate and develop collection, preservation, and analytical methods for additional CTAs, prioritized by risk and intelligence, as well as environmental effects on sampling and signatures. In FY 2011, the project plans to develop additional analytical methods for emerging CTAs prioritized by risk and intelligence. The project will select out-year (FY 2010 and forward) chemical forensics studies based on inputs from customer agencies, to ensure optimal interagency collaboration and support of foreign government partners.

Deliverables consist primarily of reports, peer-reviewed articles in appropriate scientific journals, and Standard Analytical Methods provided to customers and maintained in a Chem FP Library on the Chemical Security Analysis Center website.

*The Economic Supply Chain Analysis Project* - Develops analytical capability to assess the impact of natural and man-made disruptions on the chemical infrastructure of the United States. This capability will enable DHS to conduct 1) policy analysis of the chemical sector as a whole; 2) consequence analysis of the impacts of natural and man-made events on the chemical industry and chemical-dependent sectors of the economy; and 3) analysis of individual chemical assets. Detailed datasets including individual process unit and independencies with transportation and utility sectors enable cross-sector assessments of the effect of hurricanes, floods, earthquakes and other causes of chemical supply chain disruptions. In FY 2009, the project modeled the inorganic chemical supply chains. In FY 2010, the project will refine inorganic, organic, and specialty chemical supply-chain models, in addition to automation of dataset maintenance.

***Detection Program*** – FY 2010: \$15.992 million; FY 2011 estimate: \$14.447 million. Develops technology to warn and notify of a chemical threat release. It includes technologies responders need to survey potentially contaminated scenes, while limiting their exposure to chemical agents. This program aims to provide technologies that can sense a broad spectrum of chemical agents and commonly monitored toxic chemicals, in a single package, at costs that will support dual-use application. Developing this capability requires a leap forward in technology for next-generation systems. Due to the various physical properties associated with detecting high-vapor pressure versus low-vapor pressure chemical threats, this application requires an array of technologies to ensure that it addresses the full spectrum of chemical hazards.

Two of the detection systems – the Autonomous Rapid Facility Chemical Agent Monitor (ARFCAM) and the Lightweight Autonomous Chemical Identification System (LACIS) – are the first-generation chemical detection systems for facility monitoring and handheld use, respectively. Currently, commercially available systems cannot detect a wide range of CWAs and TICs and often have high false-alarm rates. ARFCAM and LACIS address these gaps.

*ARFCAM Project* – Develops a low-cost, fully autonomous, networkable chemical monitor that will “detect-to-warn” the presence of up to 17 CWAs and high-priority TICs within a single device at both immediately dangerous to life and health (IDLH) and permissible exposure limit (PEL) concentrations. This project will improve protection of facility occupants by more reliably detecting a wide range of agents. In FY 2009, the project completed test-bed trials and expanded the independent test and evaluation (IT&E) of candidate detector approaches. In FY 2010, the project will conduct a critical design review to down-select successful prototype detectors for developmental field-testing scheduled to occur in FY 2010 and FY 2011. In FY 2011, the project plans to report on developmental test and evaluation (DT&E) of field prototypes; deliver operational test articles and technical data package; and transition successful candidates

through commercialization, SAFETY Act certification, and designation as allowable grants expenditure.

*LACIS Project* – Develops a networkable handheld detector for responders, which will detect up to 17 TICs and CWAs in a single sensor package. The S&T Directorate is targeting LACIS to detect TICs and CWAs below the IDLH level, emphasizing a very low false-negative response. This system more reliably detects a broader range of chemical agents for improved protection of responders to a chemical incident. Additionally, it will enable enhanced detection capabilities at borders, portals and other nodes of people and cargo flow. In FY 2009, the project initiated and completed test-bed trials and expanded and continued the IT&E of prototype detectors. In FY 2010, the project will conduct a critical design review to down-select successful prototype detectors for developmental field-testing scheduled to occur in FY 2010 and FY 2011. In FY 2011, the project plans to report on DT&E of field prototypes; deliver operational test articles and technical data package; and transition successful candidates through commercialization, SAFETY Act certification, and designation as allowable grants expenditure.

*Advanced Chemical Vapor Detection System Project (formerly Next-Gen ARFCAM & LACIS)* – Develops technology that can be used both as an autonomous, networked continuously running facility monitor and a hand-portable, networked chemical detection system that will quickly (<1 min) “detect-to-warn” of the presence of up to 40 high-priority TICs and CWAs including conventional and non-traditional agents. Starting in FY 2010, the project will initiate research efforts aimed at exploring novel approaches to chemical detection. In FY 2011, the project plans to define requirements and initiate concept exploration.

*Integrated CBRNe Detection System Project* – Develops an architecture that integrates reporting from disparate chemical, biological, radiological, and potentially nuclear and explosive (CBRNe) detection/collection systems. This system will provide timely CBRNe detection, identification, and assessment of the threat and enable appropriate response by local, State, and Federal officials. It will greatly improve the integration of alarm and response assets across multiple attack modes, resulting in more rapid and informed decisions at the appropriate response level. In FY 2009, the project expanded the Integrated CBRNe pilot testing to include biological and explosive detection integration and performed a full-scale demonstration. In FY 2010, the project will conclude with the development of a lessons-learned package and a technical template/guidance document to support implementation by other Federal, State, and local agencies.

*Low-Vapor Pressure Chemicals Detection Systems (LVPCDS) Project* – Investigates man-portable technology to detect and identify persistent low vapor pressure chemical threats on surfaces. This system will enable a rapid, standoff survey of areas potentially contaminated with persistent chemical agents, thus accelerating facility restoration. In FY 2009, the project conducted test and evaluation of an engineering development model in a simulated operational environment. In FY 2010, the project will build, test, and

evaluate a field prototype system and deliver the final project report. In FY 2011, the project plans to complete developmental test/evaluation of field prototype and complete technical data package.

*Non-Intrusive Container Monitor Project* – Investigates technology to rapidly and efficiently determine the contents of suspicious packages passing through security portals or containers in cargo. This project focuses on enhancing security at portals within and at the perimeter of key elements of our national infrastructure. This technology will promote the interception and confiscation of illicit materials by a variety of customs, law enforcement, and responder personnel. In FY 2009, the project conducted research to characterize the range of hazards that can be interrogated effectively through common packaging materials. In FY 2010, the project will explore new technology concepts. In FY 2011, the project plans to report on mid-phase laboratory testing against potential hazards or their surrogates.

*Standoff Chemical Detector Project* – Develops a flexible, mobile standoff chemical detector that can identify and quantify a broad range of toxic industrial chemicals (TICs) and chemical warfare agents (CWAs) from distances greater than 100 meters. Required sensor characteristics include high sensitivity, low false alarms and rapid response time (ideally real-time), all in a compact and robust package. Target users are First Responders, local emergency management officials in the locale of chemical industry sites, and government agencies maintaining mobile chemical response platforms. In FY 2011, the project plans to conduct a market survey and deliver several trade studies to assess the requirements of customers. In addition, based on the trade studies, a technology assessment will explore current technologies and determine the best path forward.

***Response and Recovery Program*** – FY 2010: \$18.695 million; FY 2011 estimate: \$12.375 million. Provides technologies for restoring a chemically contaminated area to a normal condition. This work primarily supports the development of technologies and guidelines for decontamination and the analysis of contaminated areas both before and after restoration processes. These efforts will decrease the time it takes to recover a contaminated space after a chemical agent attack on key infrastructure. This program also includes development and demonstration of facility restoration and decontamination technologies and guidelines; development of a mobile chemical analysis laboratory; and development of fixed-site chemical analysis laboratories for CWAs.

*Facility Restoration Demonstration Project* – Develops a systems approach to response and recovery (R&R) of critical transportation facilities following a chemical agent release. This project develops efficient planning tools, identifies decontamination methods, identifies sampling methods, and develops decision analysis tools. This project will enable rapid recovery from a chemical agent release in a major transportation facility, minimize the economic impact of a chemical agent release, and inform defensible public health decisions concerning the re-opening of major transportation facilities following a chemical agent release. In FY 2009, the project completed a tabletop exercise to refine restoration guidance with participation of key Federal, State, and local

stakeholders as well as a well-attended demonstration for stakeholders to promote developed technologies and procedures. The project will conclude in 2010 with the finalization of restoration guidance in coordination with EPA and the execution of an operational demonstration in the Los Angeles airport system.

*Fixed Laboratory Response Capability Project* – Develops prototype environmental laboratories and protocols to assist with the assessment and remediation of CWA contamination. These laboratories will have full EPA quality certification, standard methods for analysis of CWAs in environmental matrices, and standard reporting protocols. The laboratories will be located in high-threat areas and be available to assist law enforcement with rapid identification of unknown chemical hazards. The optimization of laboratory protocols will maximize overall throughput and the capability will be appropriately sized to assist in remediation of incidents involving CWA or TIC releases. This project will greatly reduce the time needed to restore contaminated facilities and inform public health decisions regarding re-use. In FY 2009, the project optimized the high-throughput analytical methods, jointly with EPA, and established a proficiency testing process that the original three prototype laboratories demonstrated. The project quantitatively determined via round-robin tests the improved analytical capacity for environmental samples containing CWAs. In FY 2010, the four additional prototype laboratories will complete proficiency and high-throughput tests, and the project will complete the optimization. In FY 2011, the project plans to complete demonstration and transition the capability to EPA for maintenance and expansion.

*NTA Laboratory Capability Project (formerly NTA Mobile Laboratory Capability)* – Develops a high-throughput chemical laboratory system for analysis and identification of NTAs. The project will enable high-throughput analysis for rapidly mapping contamination and supporting the recovery of contaminated areas. This project will help government officials make rapid determinations and expedite the return of areas contaminated with evolving chemical threats to normal use. In FY 2009, the project completed studies to inform decisions regarding the optimum target laboratory platform (e.g., fixed site, mobile, or transportable). In FY 2010, the project will validate analytical assay performance across multiple matrices, optimize sample preparation methods to maximize agent recovery/detection, and complete a system design. In FY 2010, the project also will initiate lab design with front-end analysis to evaluate appropriate protocols and technologies for inclusion in the laboratory, and gather necessary standard operating procedures from end-users. In FY 2011, the project plans to initiate lab construction using customer-designated platforms.

*Integrated Detection/Decontamination Demonstration Project* – Demonstrates newly evolving tools for detecting the release of evolving chemical threats, mapping chemical contamination, and monitoring the decontamination process through facility clearance. This project plans to reduce the overall time for recovery of critical infrastructure by focusing response on effected areas. In FY 2010, this project will complete a system study and market survey of technologies and procedures, and will begin planning a demonstration of available technologies. In FY 2011, this project plans to demonstrate and evaluate performance of surveyed technologies.

*Chemical Decontamination R&D Project* – Develops and tests technologies that decontaminate NTAs, CWAs, and persistent TICs. The project will assess the validity of current techniques for decontamination of NTAs, describe performance gaps, and begin to fill gaps through a measured R&D program. In FY 2009, the project completed the initial study and described key performance gaps. In FY 2010, the project will select the most promising new approaches for use in proof-of-concept demonstrations against NTAs and traditional persistent chemical threat agents. In FY 2011, the project plans to investigate new approaches for use in proof-of-concept demonstrations against NTAs and traditional agents.

*Integrated Consortium of Laboratory Networks (ICLN) Project* – Consists of a national homeland security infrastructure with a coordinated and operational system of laboratory networks that provide timely, high-quality, interpretable results for early detection and effective consequence management of acts of terrorism and other events requiring an integrated laboratory response. This project will provide optimized national laboratory preparedness by improving coordination of laboratory response to incidents and by promoting common standards of performance across laboratory response assets of multiple Federal agencies. In FY 2009, the project developed an integrated laboratory response architecture and assessed the architecture through table-top exercises. In FY 2010, the project will transition the operational aspects of the ICLN to OHA and continue to support specific laboratory response technological assessments and improvements in the S&T Directorate's program. In FY 2011, the project plans to refine the model for gap assessments in laboratory response.

**Department of Homeland Security**  
**Science & Technology**  
**Research, Development, Acquisitions, and Operations**  
**Command, Control and Interoperability**  
**Program Performance Justification**  
(Dollars in Thousands)

**PPA: Command, Control and Interoperability**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2009 Actual</b>	-	-	<b>73,830</b>
<b>2010 Enacted</b>	-	-	<b>81,764</b>
2011 Adjustments-to-Base	-	-	482
<b>2011 Current Services</b>	-	-	<b>82,246</b>
2011 Program Change	-	-	(7,414)
<b>2011 Total President's Budget</b>	-	-	<b>74,832</b>
Total Change 2010 to 2011	-	-	(6,932)

The Science and Technology (S&T) Directorate requests \$74.832 million for Command, Control, and Interoperability (CCI) in FY 2011; of this amount, \$1.871 million supports the Small Business Innovative Research (SBIR) program. The decrease of \$6.932 million reflects a reprioritization of resources within the Department to fund higher priority mission areas.

**CURRENT SERVICES PROGRAM DESCRIPTION**

The Command, Control, and Interoperability (CCI) Division is spearheading the Virtual USA strategic initiative to drive a technical and cultural shift on how the Nation shares information during emergencies. CCI will accomplish this by creating and deploying technologies and information resources to enable seamless and secure interactions among local, tribal, State, and Federal stakeholders ensuring that they have comprehensive, real-time, and relevant information to create and maintain a secure and safe Nation. Through Virtual USA, CCI's science and technology efforts work toward providing operational capabilities that:

- Integrate existing frameworks;
- Build on existing investments;
- Draw on practitioner input; and
- Employ a comprehensive approach.

CCI thrust areas include: Basic/Futures Research; Communication, Interoperability, and Compatibility; Cyber Security; Emergent Threat Assessment; Knowledge Management Tools; and Reconnaissance, Surveillance, and Investigative Technologies.

**Basic/Futures Research (BFR) Thrust/Program Area** – FY 2010: \$4.744 million; FY 2011 estimate: \$5.628 million. Addresses the increasing difficulties associated with discovering, processing, analyzing and synthesizing, understanding, securing, and communicating information. Customers and partners include the various first responder, law enforcement, public safety, and public health officials and organizations throughout the local, tribal, State, and Federal homeland security community. The BFR thrust area promotes an effective homeland security risk-management process based on comprehensive, real-time situational awareness and informed decision-making. The programs will accelerate the development of automated knowledge management capabilities to help identify and analyze potential national threats, strengthen communications interoperability, improve the security and integrity of our Nation’s cyber infrastructure and the internet, and apply integrated, network- and database-aware sensors and investigative tools.

*Visual Analytics, Precision Information Environments (VAPIE – formerly, Visual Analytics and Physics-based Simulation Research) Project* - Visual analytics refers to visualization-based techniques and technologies that enable such diverse, diffuse, and dynamic data to be shared, analyzed, and understood in real time. The techniques enable users from the local, State, tribal, and Federal first responder, law enforcement, public safety, and public health communities to collaborate with database information as well as on-scene data. In FY 2009, the project, directed through the National Visualization and Analytics Center (NVAC), developed a multi-modal common visual-analytics framework; demonstrated a lightweight Scalable Reasoning System (SRS) for Visual Analysis at the San Diego Automated Regional Justice Information System (ARJIS); and piloted a full visual-analytics suite tailored for its Computer Statistics (CompStat) system at the Port Authority of New York and New Jersey (PANYNJ). In FY 2010, the program will design and demonstrate a combined PANYNJ CompStat and ARJIS SRS capability in both locations; complete integration of the NVAC, the CCI Center of Excellence, and the DHS-NSF FODAVA research activity; and demonstrate a limited, metropolitan-scale precision information environment for San Diego and Seattle. In addition, the program will support the 2010 Olympics by implementing a Common Operation Picture and a Visual Analytics Center and will establish a basic Science-Industry-Funding Transfer framework (SIFT) for moving research products to local, State, and Federal applications. In FY 2011, the project plans to develop incident-scale simulation capability, and demonstrate the Mid-Atlantic Data Sharing Program.

*Discrete-Element Computing, Privacy and Forensics (formerly data-Intensive Computing, Privacy, and Forensics) Project* – Develops specialized technologies and techniques for accessing, managing, and processing multiple data types, modes, and structures. To be most effective and useful, these techniques must operate in real-time on dynamic, streaming data and include networked sensor or surveillance data. In FY 2009, the project tested the application of advanced mathematical approaches that allow

computers to handle complex data, including video, audio, text, and other data. This effort is critical to making huge quantities of information both intelligible and useful for analysts and decision makers. In FY 2010, the project will design and create the discrete-element computing hardware architecture, demonstrate a discrete element framework for synthetic simulation environments, and pilot discrete-based techniques for incorporating information privacy and security. In FY 2011, the project plans to test common data-intensive computing architecture and identify privacy-ensuring data elements.

*Collaboration Project (formerly included within above efforts)* – Creates valuable scientific and technical collaboration with partners both inside and outside the DHS research community which enables CCI to leverage both its funding and technical expertise and take advantage of research activities underway in government and industry laboratories and in universities in the US as well as abroad. In FY 2009, further collaborations occurred with Germany, the Central Intelligence Agency (CIA) and Department of Defense (DOD) within the United States based on a previously signed Memorandum of Understanding (MOU). In FY 2010, CCI will expand joint programs to include machine learning (DHS National Science Foundation (NSF) Foundations of Data and Visual Analytics (FODAVA)); visual analytics based cyber security techniques (European Union), cognitive science for visual analytics (Canadian VAC), and large-scale database visualization (Germany). In FY 2011, the project plans to complete integration of FODAVA mathematical design with NVAC and complete the first joint research program with the German Ministry of Interior.

*Center of Excellence Project* – Identifies and examines novel techniques and technologies for discovering, analyzing, communicating, and securing information. In FY 2011, the project plans to integrate forensics and surveillance capabilities with data sharing and complete next-generation software-defined, cognitive radio development and demonstration.

**Communications, Interoperability and Compatibility Thrust Area** – Strengthens interoperable communications to improve effective information sharing at all levels of government. The thrust area coordinates interoperable emergency communications requirements for all voice and data communications systems and equipment purchased with DHS funding. It also develops and evaluates cross-jurisdictional information-sharing technologies, policies, and processes. In support of Virtual USA, the thrust area examines new technologies, which energize openness and interoperability between web-enabled capabilities and systems. CCI initiatives impact end users that include more than 60,000 emergency response agencies nationwide, state homeland security officials, and policy makers at the local, tribal, State, and Federal levels.

*Office for Interoperability and Compatibility (OIC) Program* – FY 2010: \$9.885 million; FY 2011 estimate: \$12.414 million. Strengthens and integrates interoperability and compatibility activities at all levels to improve preparedness and response among Federal, State, local, and tribal governments. OIC plans to:

- Accelerate the development of voluntary consensus standards for interoperable communications, including Project 25 and Voice over Internet Protocol (VoIP);
- Develop message interface standards and architectures that enable emergency-information sharing, data exchange, and public alerts and notifications;
- Develop standards, applications, and technologies to enable seamless access to voice, data, and imagery;
- Standardize, pilot, and evaluate wireless broadband technologies and applications across multiple networks;
- Perform interoperable communications standards compliance testing on emergency response devices and systems;
- Test and evaluate multi-band radio technologies for use in emergency communications and day-to-day operations; and
- Foster a dynamic information-sharing environment for emergency responders.

OIC also conducts the research, development, test, and evaluation (RDT&E) and standards aspects of the SAFECOM program.

*Compliance Assessment Project* – Validates that P25 standardized systems are indeed P25-compliant and that equipment from different manufacturers can interoperate. OIC works with the National Institute of Standards and Technology (NIST) to execute this project. In FY 2009, the project recognized laboratories qualified to test equipment for compliance with the P25 Common Air Interface (required by grant guidance). In FY 2010, the project will extend the program to test to the P25 Inter-RF Sub-System Interface standard, which will require evaluating and recognizing laboratories. In FY 2011, the project plans to continue interoperability testing and expand to include assessing VoIP systems that implement bridging standards and include conformance testing for P25 equipment.

*Converged Interoperable Communications Project* – Develops a system of systems approach to enable effective coordination across organizational and jurisdictional boundaries and seamlessly share relevant information when needed, as authorized. Ultimately, this will allow states and regions to coordinate preparations for response and recovery efforts for day-to-day incidents and large-scale emergencies, such as a major hurricane. Emergency responders, emergency managers, and others will be able to coordinate to pre-position assets better to assist in response efforts, plan for mass evacuations, monitor the availability of resources, and measure the initial impact. In FY 2011, the project plans to publish requirements and guidelines for base-level functionality for regions, states, and municipalities to foster a dynamic information-sharing environment for all relevant practitioners. Also in FY2011, the project plans to identify and evaluate technologies to provide integration, resource management, information management, and information protection.

*Emergency Data Exchange Language (EDXL) Project* – Facilitates the RDT&E of practitioner-driven, information-sharing standards and encourages their implementation into software, systems, and devices. In FY 2009, the project initiated and piloted data-messaging standards for the emergency response community and developed a

compliance-certification process to ensure industry implements the standards as intended. In FY 2010, the project will expand its standards development work to address the list of gaps identified through the gap-analysis effort, as well as develop and pilot additional data-messaging standards. In FY 2011, the project plans to expand standards development to ensure seamless information exchanges among the emergency management services at the local, tribal, State, and Federal levels including Federal Emergency Management Agency (FEMA)'s Integrated Public Alert and Warning System (IPAWS), the Commercial Mobile Alert Service (CMAS), and health-related fields.

*Internet Protocol (IP) Communications Test and Evaluation Project* – Researches IP-enabled communication technologies and evaluates promising solutions. This project will enable the emergency response community to confidently deploy and use IP technologies and integrate video, cellular, and satellite communications. In FY 2009, the project initiated testing and evaluation of IP solutions and prepared a report that analyzed multiple VoIP bridging solutions (technologies that allow voice communications equipment to interoperate). In FY 2010, the project will transition a set of standards, prioritized by public safety and confirmed by industry, for an operational environment. In FY 2011, the project plans to complete the first draft of the next VoIP implementation profile focused on the technology area prioritized by practitioners, identify video requirements for emergency response activities, and publish results and lessons learned from pilots of new technologies.

*P25 Interfaces Project* – Accelerates emergency-response interoperable communications through the development of national voluntary consensus standards. Through this project, OIC participates on the Telecommunications Industry Association's P25 Interfaces standards committee. The project will enable connections between multi-vendor and multi-jurisdiction communications infrastructure components and allow greater interoperability and flexibility. In FY 2009, the project launched a demonstration between VoIP and P25 gateways. In FY 2010, the project will complete the development of the test standards and testing tools for new and existing interfaces. In FY 2011, the project plans to complete the test standards and testing tools for priority interfaces and publish field evaluations of multi-band radio technologies in several types of jurisdictions and regions.

*Wireless Broadband Technology Project* – Tests and evaluates commercially available and emergent wireless broadband products to reveal capability gaps. The project will ensure that technologies developed in the laboratory work in a real-world environment to support the emergency response community. In FY 2009, the project developed a strategy for effective emergency-response use of and migration to the 700 MHz band. In FY 2010, the project will pilot cutting-edge emergency-response communications technologies (e.g., wireless broadband prototypes). In FY 2011, the project plans to publish recommendations regarding the transition to wireless broadband solutions.

**Cyber Security Thrust Area** – Leads cyber security research, development, testing, evaluation, and transition to secure the Nation's current and future critical cyber infrastructure. As outlined in the President's *National Strategy to Secure Cyberspace*

(NSSC), our Nation's economy and national security depend on information technology and the information infrastructure. Information networks directly support the operation of all sectors of our economy – energy (electric power, oil and gas), transportation (rail, air, merchant marine), finance and banking, information and telecommunications, public health, emergency services, water, chemical, defense industrial base, food, agriculture, and postal and shipping. Computer networks also control electrical transformers, trains, pipeline pumps, chemical vats, radars, etc. Cyber attacks can have serious consequences including the disruption of critical operations, loss of revenue and intellectual property, and loss of life. This thrust area consists of three programs: Information Infrastructure Security, Research Tools and Techniques, and Next Generation Technologies.

***Cyber Security Research Tools and Techniques (RTT) Program*** – FY 2010: \$6.871 million; FY 2011 estimate: \$9.400 million. Provides secure facilities and methods for testing cyber security technologies in real-life conditions. Neither existing research infrastructures nor the operational internet provide adequate means for testing defense technologies. Over the last decade, the network-security research community could not test their research prototypes and prove the utility of their research in large-scale network environments. To accelerate research, development, and deployment of effective defenses for U.S.-based computer networks, the program is developing a cyber security-testing infrastructure that allows researchers, developers, and operators from government, industry, and academia to experiment with potential cyber security technologies. This program will produce scientifically rigorous testing frameworks and methodologies to support national-scale experimentation.

***Experimental Research Testbed Project*** – Provides a cyber security testbed to evaluate defense mechanisms against attacks on the infrastructure and supports mitigation of attacks. The project supports the S&T Directorate by working with the NSF to create the Defense Technology Experimental Research (DETER) cyber security testbed. Existing testing facilities cannot handle experiments on a large enough scale to represent today's operational networks or the portion of the internet that might be involved in a security attack. Industry has only been able to test and validate new security technologies in small- to medium-scale private research laboratories that do not adequately simulate a real networking environment. In FY 2009, the project tested five new technologies. In FY 2010, the project will test additional technologies that may include worm defense, routing security, distributed denial of service defense, malware detection, and domain name system security. In FY 2011, the project plans to increase overall testbed capacity and scaling capabilities.

***Experiments and Competitions Project*** – Addresses cyber security requirements from DHS customers in support of operational missions in critical infrastructure protection. In FY 2009, the project deployed technology that defends against malware and botnet attacks on the S&T LABNET, which included a connection to the Defense Research and Engineering Network (DREN). In FY 2010, the S&T Directorate will work with the oil and gas sector as part of the Linking Oil & Gas Industry to Improve Cyber security (LOGIIC) consortium. LOGIIC is a public/private partnership that allows industry to perform pre-competitive collaborative research and development. During FY 2010, the

LOGIIC consortium will complete the Safety Instrumented Systems (SIS) Project, which will result in security improvements to individual systems, architectural recommendations to greatly increase the security of SIS/PCS integration, and confidence that safety systems are verifiably secure. In FY 2011, the project will engage with DHS customers and relevant Government-wide organizations to develop a lifecycle approach to testing, evaluation, experimental deployment, and transition of new malware and botnet detection and mitigation techniques.

*Research Data Repository Project* – Creates and maintains a large-scale data set repository of real network and system traffic for use by the cyber-security research community to accelerate design, production, and evaluation of next-generation cyber-security solutions, including commercial products. In FY 2009, the project increased the large-scale data sets applications to 200. In FY 2010, the project will add 50 cyber-security data sets to the Research Data Repository to allow users to more effectively test technologies using a wider sample of data. In FY 2011, the project plans to continue adding datasets to the repository and produce the interim report on the impact of the project on a National scale.

***Information Infrastructure Security (IIS) Program*** – FY 2010: \$13.335 million; FY 2011 estimate: \$8.969 million. Facilitates the implementation of the President's NSSC. This program leverages the collective resources of private companies and technology vendors to identify and demonstrate new technologies to help protect the Nation's infrastructure. Through the IIS program, the S&T Directorate engages with industry, government, and academia to ensure that the core functions of the internet develop securely and benefit all owners, operators, and users, including internet operations organizations. In addition, the IIS program addresses economic assessment, risk analysis, and modeling requirements to implement and deploy cyber security technologies.

*Cyber Infrastructure and Emerging Threats Project* – The Distributed Environment for Critical Infrastructure Decision-Making Exercises (DECIDE) effort is a distributed scenario-based risk-management exercise tool designed to enable large businesses in critical infrastructures to develop coordinated responses against cyber attacks based on their business models. In FY 2009, the project provided a dedicated exercise capability for several critical infrastructures in the U.S. In FY 2010, DECIDE will facilitate distributed infrastructure protection exercises by providing a multi-user simulation framework aimed at business continuity managers. Also in FY 2010, DECIDE will demonstrate more complex user interfaces and decision trees, and scenarios involving equities and options trading, clearing and settlement, and investment banking.

*Cyber Security Assessment Project* – Conducts economic assessment, risk analysis, and modeling requirements that focus on implementation and deployment of cyber security technologies. In FY 2009 and FY 2010, the project led technology transition forums with other Federal agencies and large system integrator companies and developed reports in support of cyber security technology transitions. In FY 2011, the project plans to conduct red-teaming efforts on developed technologies and provide red-team assessments and feed back.

*Insider Threats Project* – Translates appropriate control requirements into a security policy applied to documents and preserved from cradle to grave. In FY 2009, the project developed and evaluated a graph-based approach for insider threat; designed, prototyped, and analyzed Document-based Management, Access Control, and Security (DocuMACS). In FY 2010, the project will develop and implement graph-based approach performance enhancements; pilot DocuMACS Version 1.0; and deliver a Source Code/Executables and DocuMACS Computer Based Training (CBT) Guide. In FY2011, the project plans to accelerate transition of new technology for insider threats into commercial cyber security products and services.

*Process Control Systems (PCS) Security Project* – Improves security for PCS, a statistics and engineering discipline that deals with architectures, mechanisms, and algorithms for controlling the output of a specific process. PCS control water supply, electrical power, gas and oil pipelines, and other distributed processes. In FY 2009, the project initiated PCS Security activities to support improved security for process control systems used across multiple critical infrastructure sectors and developed PCS model applications to Oil and Gas Sector(s) to secure those infrastructures better. In FY 2010, the project will deliver Secure Wireless devices that will help secure wireless transmission for process control systems. In FY 2011, the project plans to create and deliver sector roadmaps and requirements documents, and evaluate current threats based on input from customers and key stakeholders.

*Secure Protocols Project* – Develops secure protocols for the cyber-components that make up the internet, specifically the internet's Domain Name System (DNS) and routing infrastructure. This project combines Domain Name Security System Security (DNSSEC) and Secure Protocol for the Routing Infrastructure. In FY 2009, the project deployed additional DNSSEC protocol and gathered operational DNSSEC query data to further analyze DNS security, and initialize deployment within government networks. In FY 2010, the project will conclude Public Key Infrastructure (PKI) deployment activities with global registries to enable effective and efficient connections between URLs; develop and deploy standards for secure routing; and gather operational DNSSEC query data to analyze DNS security further. In FY 2011, the project plans to report on draft secure routing protocols, deploy DNSSEC into government and the private sector, and continue core standards activities to develop new secure routing protocols.

*Next Generation Technology (NGT) Program* – FY 2010: \$17.981 million; FY 2011 estimate: \$17.631 million. Addresses next-generation cyber security R&D needs in support of DHS components' mission requirements. This program will accelerate transition of new cyber security technologies into commercial products and services. End-users for these technologies include: first responders, critical infrastructure providers, the banking and finance sector, private industry, and government.

*Cyber Security Forensics Project* – Develops new technologies for law enforcement officers and forensic examiners. Starting in FY 2011, the project plans to test and

evaluate deployable solutions and new capabilities in partnership with law enforcement customers.

*Enterprise Level Security Metrics Project* – Develops a science of security measurement and the supporting tools and techniques to make the measurements practical and useful as decision aids. Specifically, this project addresses evaluating security at the system level, providing tools that facilitate decision-making and accountability through collection, analysis, and, reporting of relevant performance data. In FY 2010, the project will develop security measurements and the supporting tools and techniques. In FY 2011, the project plans to mature models and simulation capabilities to more accurately simulate how attack actions affect system performance and define an initial set of risk metrics based on those capabilities.

*Internet Measurement Techniques Project (formerly Internet Route Monitoring)* – Identifies critical internet infrastructure, incorporating an understanding of geographic and topological mapping of internet hosts and routers. These maps will enhance internet monitoring and modeling capabilities to identify threats and predict the cascading impacts of various damage scenarios. In FY 2009, the project released open-source software Prefix Hijack Alert System (PHAS). In FY 2010, the project will complete Geographic router-level maps. In FY 2011, the project plans to complete and deliver mapping and analysis tools to the National Cyber Security Division (NCSD) of CS&C within DHS.

*Leap-Ahead Technologies Project* - In response to the Comprehensive National Cyber security Initiative (CNCI), investments in leap-ahead research and development will target revolutionary techniques and capabilities that can be deployed over the next decade with the potential to redefine the state of cyber security. In FY 2011, the project plans to initiate research activities studying trustworthy computing in scalable environments and realistic settings directly applicable to the Nation's critical infrastructures, and establish long-term (five plus years) goals and outcomes

*Modeling of Internet Attacks Project* – Develops modeling and analysis capabilities that predict the effects of cyber attacks on commercial and Federal Government infrastructures. This project will improve public Border Gateway Protocol (BGP) route monitoring capabilities; extract peering relationships from internet topology and telco hotel datasets; and produce more reliable geo-location tools for visualizing and navigating geographic as well as topological connectivity and increase accuracy of currently available tools for matching IP addresses to router interfaces. In FY 2010, the project will collect network traffic data revealing internet attacks from widely distributed internet locations that will help to create technologies to combat internet attacks. In FY 2011, the project plans to apply research activities to operational setting in ongoing studies of cyber attacks.

*Software Quality Assurance Project* – Develops tools and techniques for analyzing software to detect security vulnerabilities associated with our Nation's critical infrastructure (energy, transportation, telecommunications, banking and finance, and

others) and networks. Specifically, this project addresses the presence of internal flaws and vulnerabilities in software and deals with the root of the problem by improving software security. In FY 2010, the project will provide tools and techniques to analyze software to detect security vulnerabilities. In FY 2011, the project plans to establish and apply advanced software testing services to selected software code bases used by the Government and other critical infrastructures.

*Usability and Security Project* – Create interface design standards, a science of evaluation for usable security, and tools that will assist developers in the producing systems that are both more secure and easier to use for the common operator. In FY 2011, the project plans to initiate activities to improve existing security mechanisms and cyber systems and initiate research and development to study usable security in applicable environments

**Emergent Threat Assessment Thrust Area** – Provides DHS components, the Intelligence Community, and other government agencies programmatic and technical expertise in emerging threats, risk sciences, intelligence, surveillance, and reconnaissance (ISR) and other areas applicable to homeland security that may be especially sensitive, classified, or requiring extraordinary security protection.

**Emerging Threats Program** – FY 2010: \$1.511 million; FY 2011 estimate: \$1.798. Analyzes emerging threats through commissioned and interagency threat assessments; expertise brought by the customers in the Integrated Product Team (IPT) process; and assessments of existing counter-measure availability and capabilities. Individual activities under the project areas including deliverables, technology capabilities, customer, performer, and/or overall program focus may be classified.

*Countermeasures Development Project* – Addresses the dynamic nature of emerging threats previously identified through threat assessments of new technology. The project identifies capabilities to counter emergent threats for which countermeasure capabilities do not yet exist. In FY 2009, Countermeasures Development completed project SWITCHBLADE to include an operational prototype and design package. The SWITCHBLADE system provides the capability to identify/detect a wide range of undeclared electronics, in both the on and off position. In FY 2010, the project will identify and continue countermeasure development needs. In FY 2011, the project plans to identify emerging and disruptive technological threats that do not have countermeasures.

*Future Capabilities Research and Development Project* – Supports research collaboration with external agencies and international partners. In FY 2009, the project completed the proof-of-concept development of a nanosensor detector in collaboration with outside agencies. This resulted in a library of nanosensors tuned to compounds of human odors with technology that uses DNA-coated carbon nanotube field-effect transistors as sensing elements. Also in FY 2009, the project continued a proof-of-concept effort in determining if satellite imagery can detect and identify threatening plant pathogens. In FY 2010, the project will continue working on the Detect and Identify Threatening Plant

Pathogens activity. Also, in FY 2010, the project will initiate a proof-of-principle project to determine whether individuals who intend to deceive or are in the act of deception experience an identifiable and quantifiable change in their odor signature. In FY 2011, the project plans to complete the proof-of-concept biometric screening tool and satellite imagery detection of threatening plant pathogens algorithms that may be introduced into the United States.

*Identification and Assessment Project* – Anticipates and defines potential threats emerging from new scientific and technological advances, and evaluates terrorists’ innovative or novel use of existing technologies. In FY 2009, the project completed a study to examine potential homeland threats and vulnerabilities associated with emerging U.S. hydrogen fuel-cell infrastructure. Also in FY 2009, the project initiated a study that assessed the vulnerabilities associated with the reliance on civil infrastructure upon the Global Positioning System (GPS). In FY 2010, the project will complete the threat assessment of civil reliance on GPS and provide up to two threat assessments on over-the-horizon technologies and harmful innovative uses of that technology. In FY 2011, the project plans to identify assessment topics on emerging and disruptive technological threats.

***Intelligence, Surveillance, and Reconnaissance (ISR) Program/Project*** – FY 2010: \$2.189 million; FY 2011 estimate: \$1.271 million. Supports research activities to improve the collection and dissemination of intelligence information using satellites, radars, sensors, and unmanned platforms in support of DHS components and Northern Command. In FY 2009, the project continued an airspace modeling effort. The project performed systems analysis of DOD surveillance, information gathering, and decision-support technology investments to benefit the complex DHS needs in Customs and Border Protection (CBP) Air and Marine and Coast Guard operations, protecting critical infrastructure, and integrating operations with other government agencies. In FY 2010, the project will initiate a program to model the effects of wind turbine farms on radar sites. This will support the CBP Air and Marine Operations Center (AMOC), the CBP A&M Joint Program Office, and assist interagency partners that face the same issue. In FY 2011, the project plans to complete the modeling effort initiated in FY 2010 and continue to form collaborative efforts to pinpoint and address ISR technological gaps that face first responders.

***Risk Sciences Program*** – FY 2010: \$0.800 million; FY 2011 estimate: \$0.702 million. Fosters systematic, transparent, and goal-focused application of risk concepts and tools to better support strategic, operational, and tactical decision-makers across the national homeland security enterprise. In addition, this program enables informed decision-making across government, and particularly in DHS.

*Comparative Studies Project* – Conducts research and analytic studies (e.g., historical, competitive strategies, net assessment, etc.) to examine the past and future evolution of the terrorist-versus-security-force competition over time. In FY 2009, the project delivered a report on “*Consequences of Worldwide Immigration*”. In follow-on to “*Reasons for Success and Failure of Terrorist Attacks*”, the project conducted a

comparative study looking at the success and failure of on-the-ground security forces in U.S. and foreign settings. In FY 2010 the project will prepare a number of focused issue papers to support the Quadrennial Homeland Security Review. In FY 2011, the project plans to conduct at least one comparative study and/or net assessment as directed by the Office of Policy DHS.

*Risk and Decision Support Project* – Conducts R&D aimed at advancing risk and decision support sciences (risk analysis, risk communications, performance metrics, etc.). In FY 2009, the project supported the development of a risk-assessment methodology model using actual information from a transit-security project, produced a Risk and Intelligence Communities Integration Study, and provided support to National Protection Programs Directorate (NPPD). In FY 2010, the project will continue improving risk practices in DHS with particular emphasis on improving both internal and external DHS risk communications practices. In FY 2011, the project plans to identify research and development projects that would be complementary to previous threat assessments.

**Knowledge Management Tools Thrust Area** – Provides knowledge management capabilities to reduce the risk of terrorist attacks and to prepare for and respond to natural and man-made disasters. In support of Virtual USA, efforts in this thrust area will:

- Create overarching architecture and criteria to enable nationwide information sharing;
- Develop technologies to improve the ability to manage, analyze, share, and secure information; and
- Develop tools to enable jurisdictions, communities, and states to work together.

The thrust area is developing new capabilities for the DHS Office of Intelligence and Analysis (I&A), NPPD, U.S. Immigration & Customs Enforcement (ICE), U.S. Coast Guard (USCG), FEMA, local, tribal, State DHS partners and the DHS information sharing enterprise, which is a gateway for users to retrieve information, services or resources from the Department. This includes tools and methods to handle massive amounts of information that are widely dispersed in a great variety of forms. Work in this thrust area is collaborative and complements efforts in the intelligence, law enforcement, and homeland security communities. This thrust area consists of the Knowledge Frameworks and Collaborative Information Sharing programs.

**Collaborative Information Sharing Program** – FY 2010: \$8.158 million; FY 2011 estimate: \$5.926 million. The purpose of this program is to focus on the development and deployment of advanced technologies to support inter-organizational and multi-level dissemination of information and intelligence products. This includes:

- Statistical analysis and correlation technologies for creating broad threat awareness;
- Operational support capabilities for protecting infrastructure, guarding against threats, and providing relevant, actionable intelligence to operators;
- Strategic analysis capabilities to recognize, track, and accurately assess the significance of trends in suspicious activity reports; and

- Advanced encryption and redaction tools, digital-rights management technologies, and automated destruction capabilities to increase the multi-level security of distributed products.

*Network Identity Management Project* – Develops a highly scalable architecture for managing user identities, rights, and authorities used within and external to an organization’s networks. The project will enable timely, complete evaluation of an individual’s status and eligibility for access – enhancing the security of homeland security (local, tribal, State, and Federal) information-sharing environments by improving authentication for persons, hardware devices, and software applications. In FY 2009, this project evaluated the Homeland Security Presidential Directive (HSPD)-12 Backend Attribute Exchange (BAE) Architecture, the proposed government-wide standard for exchanging user attributes. In FY 2010, this project will conduct an operational test of the BAE to share information between FEMA, State, and local first responders and the United States Northern Command (NORTHCOM) in a secure and timely manner. In FY 2011, in partnership with National Security Agency (NSA), the project plans to submit a proposal for a federated interagency agreement between DoD and DHS on how user attributes will be transferred, shared, and maintained, based on the outcomes of the use-case pilot between FEMA and NORTHCOM. The project will continue to conduct pilots with State and local entities to enable information sharing and ensure preservation of privacy and information assurance. Based on the test and evaluation of the identity-management tools and technologies, the project will publish results of concept evaluation and provide recommendations for next steps.

*Secure Multi-Level Information Dissemination Project* – Provides secure inter-organizational and multi-level dissemination capabilities for information and intelligence products. In FY 2009, the project assessed and documented requirements for external intelligence product dissemination and evaluated relevant multi-level security technologies. In FY 2010, the project will support Controlled Unclassified Information (CUI) implementation and rollout pilots for additional multi-level security technologies. In FY 2011, the project plans to assess capability gaps and perform multi-level dissemination technology pilots to support the CUI framework.

*Suspicious Activity Reporting (SAR) Project* – Assists with the technical development of a cross-agency suspicious activity reporting tool/system to track, in real-time, all encounters with individuals on government watch lists, while protecting privacy. In FY 2009, the project developed mission-based reports and requirements for improving each DHS component’s SAR capabilities, including an integrated approach to SAR analytics based on best practices and knowledge of common analytic tools and techniques. Also in FY 2009, the project delivered a Capability Migration Roadmap that outlines how DHS components could deploy the SAR tool. In FY 2010, the project will perform technology assessments, system interface specifications, and software development for SAR. The S&T Directorate fully coordinates this effort with related Department of Justice (DOJ) efforts. In FY 2011, the project plans to provide information on analytic capabilities and technical segments for collaboration planning.

*Threat Dissemination Standards Project* – Disseminates intelligence products to State, local, and private sector security partners. In FY 2009, the project conducted a pilot test to deploy the Critical Infrastructure Inspection Management System (CIIMS) to the Los Angeles Police Department (LAPD) ARCHANGEL program that was integrated into the patrol, assessment, prevention, response, and after-action process of critical infrastructure protection. In FY 2010, the project will design specifications for sensor fusion standards, exchange protocols, and continue the pilot test with the LAPD ARCHANGEL program. In FY 2011, the project plans to pilot National Information Exchange Model (NIEM) exchanges in geospatial applications such as Google Maps or Google Earth in fusion centers.

***Knowledge Frameworks Program*** – FY 2010: \$12.246; FY 2011 estimate: \$7.715 million. Reduces the risk of terrorist attacks and enhances preparations for and responses to natural and man-made disasters. Efforts include developing tools and methods to handle massive amounts of information that are widely dispersed in a great variety of forms. The best way to save lives is to identify pertinent information, understand its meaning, and then use it to assess an actual threat and determine the level of risk before an attack or incident occurs.

*Collective Situational Awareness Project* – Researches and develops technologies for accessing and exchanging situational awareness information between the USCG and its maritime, law enforcement, and intelligence partners. The project establishes information-sharing protocols to enable the exchange of information across disparate National System security networks. In FY 2009, CCI provided a basic demonstration of the Global Command and Control System-Joint (GCCS-J) Track Management System (TMS) as a web service. In FY 2010, the project will continue to provide technical services to the DHS Office of Applied Technology within the Chief Information Office, to collect, test, and validate requirements across the DHS Enterprise. In FY 2011, the project will focus on collective situational awareness that crosses the local, tribal, State, and Federal boundary, as part of the Virtual USA initiative.

*Common Operating Picture (COP) Data Fusion Technologies Project* – Develops sensor integration technologies to fuse massive volumes of surveillance information from government agency and private sector sensor systems. In FY 2009, the project initiated development of the Automated Continuing Evaluation System (ACES) for the DHS Headquarters Office of Security. In FY 2010, the project will automate the verification and validation process for the Fused Analytic Desktop Environment (FADE) project, along with producing emerging requirement analysis papers. In FY 2011, the project plans to develop a catalogue of common fusion-center capabilities and their associated technologies.

*Integrated Data Processing and Analysis Project* – Develops scalable technologies for the integrated analysis of free text, database records, audio, video, imagery, transactional data, geographical data, and sensor information. This project provides technological tools for intelligence analysts to “connect the dots” of information that legally collected by DHS to protect the homeland. In FY 2009, the project launched Integrated Text

Analytics for the ICE Office of Intelligence. In FY 2010, the project will transition text analysis/geospatial capability to the production environment and demonstrate a proof-of-concept prototype to ICE and local and State partners. In FY 2010, the project will transition the Detainee Prioritization and Questioning system to ICE and deploy information-sharing enhancements among regional law enforcement agencies. In FY 2011, the project plans to conduct regional information sharing and collaboration pilots with law enforcement agencies in the Mid-Atlantic and Pacific Northwest regions.

*Law Enforcement and Intelligence Sensor Fusion Project* – Develops comprehensive sensor-fusion standards and protocols for sharing sensor information between traditional law enforcement organizations and intelligence partners. In FY 2009, the project developed a prototype of multiple visualization environments and demonstrated the exchange of Geospatial Information System (GIS) Data between NPPD and the State of Alabama. In FY 2010, this project will pilot the integration of multiple technologies such as Smart Closed Circuit TV, Automatic License Plate Recognition (ALPR), a digital dashboard for incident management and coordination, an infrastructure-inspection management capability, Automatic Vehicle Locator (AVL), and Link analysis software into GIS Software. In FY 2011, the project plans to identify and prioritize sensor-fusion protocols for State and local first responders.

*Real-Time Data Processing and Visualization Project* – Develops technologies for dynamic, real-time processing, and visualization of information in multiple forms and from diverse, distributed sources. The project automates the selection, ranking, and correlation of relevant information for purpose-driven, decision making. In FY 2009, the project initiated development of the Generalized Data Driven Analysis and Integration (GDDAI) system for the ICE Office of Investigations, the Scalable Exploration of Network Flows for the U.S. Computer Emergency Readiness Team (US-CERT) and the Sea, Lake, Overland Surge for Hurricanes (SLOSH) system for FEMA. In FY 2010, this project will develop an ICE Office of Investigations' infrastructure capable of supporting enterprise-wide data fusion and web-based visualization of queries across data cubes and GIS systems. The project will roll out handheld access to the field as well as anomaly detection, and emergency-management processing and visualization for State/local emergency managers. In FY 2011, the project plans to pilot an evacuation modeling and visualization tool for multi-State/region use.

**Reconnaissance, Surveillance, & Investigative Technologies (RSIT) Thrust Area** – Provides local, State, and Federal Law Enforcement (LE) components with R&D for technologies that aid in the discovery, investigation, and prosecution of terrorists and criminals. The projects address operational component needs and gaps provided directly from practitioner groups such as the Law Enforcement Working Group (LEWG) and the Cyber Forensics Working Group. The program will address the full spectrum of crimes investigated by LE organizations with a focus on the following two areas:

- Advanced Forensic Technologies Program, and
- Investigative Technologies Program.

***Advanced Forensic Technologies Program (formerly Forensic Analysis Tools Program)*** – FY 2010: \$0.907 million; FY 2011 estimate: \$0.879 million. This program area develops cutting-edge forensic technologies to assist law enforcement investigations into terrorist and criminal acts. This program area develops forensic technologies to offer new analytical capabilities for the LE investigator community.

*Cyber Forensics Project* – Develops advanced tools to analyze and interrogate advanced technological devices (such as personal electronic devices and computer hard drives) seized by law enforcement during investigations. In FY 2010, the project will build upon research and develop a universal GPS-device analysis tool. In FY 2011, the project plans to investigate emergent technology in mobile device forensics to develop new types of forensic tools.

*Traditional Forensics (formerly Laboratory Forensics) Project* – Provides technology solutions for data-visualization, identity-questioned document examination, forensic audio/visual analysis, forensic chemistry, and forensic examination. Recent deliverables transitioned through this project have significantly increased the efficiency of component laboratories, including the Digital Ink Library. Customers include United States Secret Service (USSS), ICE, and CBP forensic labs. In FY 2010, the project will determine the most appropriate equipment for characterization of ink categories and document current best practices in print media recognition.

***Investigative Technologies Program (Formerly Law Enforcement Support Systems and Tagging, Tracking and Locating Programs)*** – FY 2010: \$1.093 million; FY 2011 estimate: \$0.629 million. This program will develop advanced integrated tools and technologies to enable the collection and display of information as well as tagging, tracking, and locating devices to monitor and capture criminal and terrorist suspects.

*RealEyes Project* – Prototype software system that enables first responders and law enforcement officials equipped with Personal Digital Assistants (PDAs) to send and receive live video and geospatial coordinates; view video from fixed or mobile cameras; and receive data (video, photos, and text) from a field command post using basic cellular technology. In FY 2010, the project will test the operational effectiveness and efficiency of streaming video for first-responder and law enforcement applications.

*Sensor Web Project* – Develops and demonstrates intelligent sensor webs for use in law enforcement applications and emergency response situations. In FY 2010, the project will focus on the development of robust, low cost, easily deployable sensor platforms to detect and track intruders; identify threats (such as carrying a weapon, crawling, or loading/unloading trucks); provide information on emergencies; and increase situational awareness.

*Tagging, Tracking, and Locating Project* – Develops technologies to provide tagging, tracking, and locating devices for the law enforcement community. In FY 2010, the project will expand the capabilities of current direction-finding equipment adapted to the changing cellular landscape. In FY 2011, the project plans to develop a single Graphic

User Interface (GUI) and software package to allow simultaneous signal across various cell phone protocols.

<b>2011 Total President's Budget</b>	-	-	<b>120,809</b>
Total Change 2010 to 2011	-	-	0

The Science and Technology (S&T) Directorate requests \$120.809 million for Explosives; of this amount, \$3.020 million supports the Small Business Innovative Research (SBIR) program.

**CURRENT SERVICES PROGRAM DESCRIPTION**

The Explosives Division develops the technical capabilities to detect, interdict, and minimize the impact of non-nuclear explosives used in terrorist attacks against mass transit, civil aviation, and critical infrastructure. This includes passenger-, baggage-, and cargo-screening technologies, including blast-resistant aircraft construction.

The Division's primary Federal customers include the Transportation Security Administration (TSA), the U.S. Secret Service (USSS), the U.S. Coast Guard (USCG), and the Office of Bombing Prevention (OBP). Other end-users include Federal, State, and local First Responders and the aviation industry.

The Explosives Division carries out its activities through four thrust areas: Explosives Detection, Mitigation; Explosives Research; and Counter Improvised Explosive Devices (C-IED)/ Domestic Explosives Threats.

**Explosives Detection Thrust Area:** Develops advanced technologies to detect explosive threats to the Nation's aviation, rail, and ship transportation systems. Activities in this thrust area include: improving existing explosive-detection methods; developing new detection methods for screening people, baggage, and cargo; and ensuring freedom-of-

movement for people and commerce. The Explosives Detection Thrust Area includes the following programs: Cargo, Canine Explosives Detection, Check Point, Homemade Explosives, and Manhattan II.

***Cargo Program*** - FY 2010: \$11.500 million; FY 2011 estimate: \$15.671 million.

Develops the next generation of air cargo screening systems to mitigate the threat of explosives placed in air cargo containers based on Department of Homeland Security (DHS) customer-identified capability gaps developed during the S&T Directorate Capstone Integrated Product Team (IPT) process. The program will continue research, development, testing, and evaluation (RDT&E) of the next generation of air cargo screening systems that will enable the screening of 100 percent of air cargo, while reducing operating costs and achieving a low false-alarm rate. The program includes the following projects:

*Air Cargo Project* – Identifies and develops the next generation of air cargo screening systems to mitigate the threat of explosives placed in air cargo containers. Activities include developing technologies to enable 100 percent air cargo screening (including break-bulk, palletized, and containerized configurations screening) with reduced operational costs and a low false-alarm rate. This technology will protect commercial airliners, as well as the Nation’s supply chain and economy. The technology will reduce reliance on human screeners to detect artfully concealed threats; provide automated equipment to screen air cargo to increase throughput; reduce the government’s oversight costs; reduce the costs of industry compliance to air-cargo screening regulations; and provide additional layers of security to enhance and verify air-cargo, supply-chain integrity. In FY 2009, the project delivered valid, reliable, and fair qualification tests at technology readiness level (TRL) 6 for the selection of cargo screeners. In FY 2010, the project will deliver a prototype mass-spectrometry, bench-top, trace detector for laboratory assessment. In FY 2011, the project plans to deliver the mass-spectrometry, bench-top detector for independent testing and evaluation and pilot testing by TSA.

***Canine Explosives Detection Program*** (Previously a project in Air Cargo, the S&T Directorate will reclassify the Canine Explosives Project as a program in FY 2011) - FY 2010: \$1.950 million; FY 2011 estimate: \$1.700 million. Provides tools, techniques, and knowledge to further understand, train, and use canine explosives detection in the DHS operational mission space. Develops more efficient training aids and advanced training techniques to improve canine detection of explosives (including homemade or liquid explosives), as well as performance in complex screening environments (e.g., airport terminals or mass transit venues with high volumes of passengers and baggage). In addition, the program will work to optimize canine explosive-detection performance to enable DHS canine user agencies such as TSA, Customs and Border Protection (CBP), USSS, and National Protection and Programs Directorate (NPPD) to meet new threats and the increased demand for canine inspections. The program includes the following project:

*Canine Explosives Detection Project* – Studies the canine olfactory system and the genetic markers that can predict high-performance explosive-detection canines, and

canine physiological limitations and strengths. In early FY 2009, the project completed a canine gait-analysis tool and written protocols, which can be used to model canines with existing knee and hip problems. Also in FY 2009, researchers completed a physical model of the canine nose that will measure airflow within the canine nasal cavity to understand odorant deposition within a canine nose better. Additionally the project will determine the feasibility of enhancing canine olfaction using zinc nano-particles to improve canine trace explosives detection. In FY 2010, the project will initiate a multi-year program to observe DHS breeding programs to determine Deoxyribonucleic acid (DNA) markers associated with desirable behavioral, physiological, and genetic traits of a successful explosive-detection dog. Results will lead to the use of DNA markers for selection of breeding pairs and for selection of procured working dogs.

The project will also enhance canine training tools and implementation. In FY 2009, researchers completed an analysis of high-priority homemade explosives (HME) formulations to identify unique chemical signatures that researchers can use as markers to develop low-cost, non-hazardous HME canine-training aids for those formulations that currently do not have them. In late FY 2009, this activity began assessing and field-testing currently available HME canine training aids to determine the effectiveness of these aids against the actual explosive type in a TSA operational environment. In FY 2010, the project will develop and transition low-cost, non-hazardous canine training aids for the highest priority HME threats identified by TSA. In FY 2011, the project plans to deliver another set of low-cost, non-hazardous canine training aids for high-priority HME threats identified by TSA.

***Check Point Program*** – FY 2010: \$8.150 million; FY 2011 estimate: \$17.000 million. Develops advanced capabilities to detect explosives and concealed weapons (including HMEs) that individuals could detonate in passenger cabins or use in the hostile takeover of mass transit systems. The program is designing a next-generation checkpoint that will enable passengers to travel seamlessly from public areas to secure areas via a high-tech corridor that will automatically identify threats. The check-point corridor will contain an integrated system of detectors (sensors, biometrics, radio-frequency identification technologies) networked with command control operations to effectively meet TSA's requirements for automation, efficiency, and cost reduction. Concepts will be developed for integrating multiple complementary and overlapping checkpoint detection technologies to obtain improved performance along with operational efficiency. Automatic Threat Recognition and Trace Detection technologies will be incorporated into an Integrated Checkpoint system, providing the framework to further advance capabilities and guide future system development. These projects will demonstrate key technology items, paving a way forward for further technology demonstrations and subsequent full-scale development, acquisition and deployment in our airports.

This program includes the following projects:

***Automated Carry-On Detection Project*** – Develops advanced capabilities to detect explosives and concealed weapons. This project also will introduce new standalone or adjunct imaging technologies, such as computed tomography (CT), to continue the improvement of detection performance and the detection of novel explosives. In FY

2009, the project completed certification for the detection of novel explosives in the new generation checkpoint system. In FY 2010, the project will transition to TSA a CT checkpoint detection system to identify potential threats based on physical characteristics. In FY 2011, the project plans to deliver a prototype Shoe-Screening system, capable of detecting explosives hidden in shoes worn by passengers.

*Automatic Threat Recognition Project* - Develops and evaluates automated target recognition algorithms for advanced imaging technology (AIT) in a test bed with the goal to automatically and reliably detect threats on passengers, eliminating the need for human interpretation in order to improve detection and false alarm performance and reduce privacy concerns. The December 25, 2009 incident clearly shows the importance of detecting threats hidden on passengers' bodies. This research will guide further enhancements necessary to reach full-scale development and deployment. In FY 2011, advanced threat recognition algorithms will be evaluated.

*Explosives Trace Detection Project* – Develops advanced capabilities to detect explosives (including HMEs) through non-contact trace residue technologies. This project is developing the capability to perform trace detection without the use of swabs and will deliver a fully functional laboratory breadboard walk-through portal in FY 2010. This will improve throughput by sampling and analyzing a passenger's wake while he or she is walking through the portal. In FY 2010, the project will conduct a demonstration of a bench-top non-contact trace detection system. In FY 2011, the project plans to deliver prototype swab-based mass spectrometry trace-detection systems for check-point applications. With lessons learned from these initial systems, the technology will be enhanced for improved detection and operational characteristics such as throughput and maintenance.

*Next Generation Passenger Check Point Project* – Develops the next-generation detection system to screen passengers for explosives at mass transit portals. This project investigates new emerging liquid- and gel-based explosive threats and includes them in a comprehensive detection system. In FY 2009, the project transitioned a dual-energy checkpoint detection system to identify potential threats based on atomic number, mass, and other physical characteristics to TSA. In FY 2009, the project collaborated with the Explosives Trace Detection Project to develop a fully functional laboratory breadboard portal to improve passenger checkpoint throughput by using real-time sampling of a passenger's wake while he or she walks through the portal (no stopping required). In FY 2010, the project will deliver a Standoff Personnel Imager at TRL 7. In FY 2011, the project plans to complete qualification for the next-generation checkpoint detection system to detect novel explosives.

***Homemade Explosives (HME) Program*** – FY 2010: \$5.300 million; FY 2011 estimate: \$3.600 million. Identifies and detects HMEs in the U.S. transportation system, in response to numerous attempted and executed terrorist attacks involving HMEs, which have led to an urgent operational need to detect these threats. The DHS S&T Directorate stood up a rapid-response team in FY 2004 to address the HME threat. The primary focus is currently on aviation venues but is expanding to other modalities of transportation (e.g., surface transportation). The program consists of the following projects:

*Homemade Explosives (HME) Project* – Evaluates all potential technologies capable of detecting and distinguishing explosives and flammable liquids from benign liquids. The project includes: improving products and systems capable of detecting HME; supporting the R&D of next-generation, novel technologies, algorithms, or prototypes for the detection of HME; and addressing potential operational venues, including airport and mass-transit checkpoints for passengers and carry-on baggage (not including cargo or checked baggage). In FY 2009, the project produced a final report for TSA. The project also completed new technology test and evaluation and reported findings to TSA. Funding for this program ends in FY 2009.

*Homemade Explosives Characterization Project* – Determines the impact, friction, and electrostatic-discharge sensitivities of HME threats. The project provides a better understanding of the potential damage of HME and their impact on aircraft. Further, this work assists the division in determining the requirements for technologies to counter this threat. This data also facilitates the safe handling and storage of volatile materials that S&T Directorate researchers and their customers routinely use to develop explosive-detection systems. In FY 2009, the project conducted detonation assessment tests, published the results, and characterized several HME formulations in an effort to improve detection technology. In FY 2010, the project will systematically qualify and quantify the physical and chemical properties of high-consequence HME threats selected by TSA, specifically hydrogen peroxide and solid oxidizers. In FY 2011, the project plans to examine HME material selection and its impact on HME safety-testing processes at several laboratory locations to generate best-practice testing approaches and further improve our predictive explosive modeling tools such as kinetic-Cheetah, Hydrodynamic code, and Finite Element Analysis.

*Homemade Explosives Stand Alone Detection Project* – This project identifies, evaluates, and improves HME detection technologies and screening methods through the collection of raw data and images from a wide variety of Commercial off the Shelf (COTS) Explosive Detection Systems (EDS), CT, and x-ray diffraction equipment. This work helps TSA determine how to improve EDS performance through hardware and software (image processing) upgrades. In addition, this project evaluates COTS equipment in laboratories to determine detection limits, false-alarm rates, and documents unique HME properties for detection exploitation. In FY 2009, the project evaluated numerous EDS – Smiths 6040i, L3 ACX 6.4, and Rapiscan 522DV – and presented the results of these evaluations to TSA. The characterization activity also provided TSA with raw and analyzed data from COTS near real-time tests in peer-reviewed reports. In FY 2010, the project will evaluate HME-detection technology that meets TSA technical requirements for screening bottles and medically essential liquids, as well as contributing to EDS certification and acquisition. In FY 2011, the project plans to determine the error associated with equipment and test-method selection for different HME safety data tests and will develop a definitive Integrated Data Collection and Analysis Compendium for HME and novel threats that the S&T Directorate will distribute to members of the explosives community.

***Manhattan II Program*** – FY 2010: \$12.630 million; FY 2011 estimate: \$4.445 million. Drives commercial development of next-generation systems that will substantially improve performance and affordability of checked baggage screening. Test and evaluation of these systems will focus on probability of detection, number of false alarms, and throughput. The project also measures affordability of these systems by evaluating initial purchasing cost, operating costs, maintainability, and other elements of the full life-cycle costs. In FY 2009, the project completed detection technology demonstrations and produced a final report for TSA. In FY 2010, the project will transition next-generation EDS performance requirements that leverage enhanced detection technology. In FY 2011, the project plans to deliver a Carbon Nanotube X-Ray source to enable higher performance in x-ray based screening systems.

**Mitigation Thrust Area** – Reduces the impact of undetected explosive threats. This thrust area hardens conveyance against threats (e.g., blast-resistant cargo containers) to enhance the protection of high-value transportation targets. The Mitigation Thrust Area includes the Conveyance Protection Program.

***Conveyance Protection Program*** - FY 2010: \$2.200 million; FY 2011 estimate: \$2.200 million. Assesses risks and mitigates the consequences of an intentional assault on air, surface, and maritime conveyances. The overall objectives of this program are to:

- Assess the vulnerability and survivability of commercial vehicles to high-energy explosives;
- Develop materials, technologies, and techniques to decrease vulnerability or improve survivability of commercial vehicles;
- Develop domain awareness systems and other information technology that help security organizations thwart intentional assault; and
- Develop information systems that allow First Responders to react most effectively to terrorist attacks, other intentional assaults, natural disasters, or other catastrophes.

TSA, the aviation industry, and the traveling public are the primary customers for this program. Current program activities focus on aircraft hardening and preventing the catastrophic loss of passenger aircraft from explosive devices detonated in passenger cabins or cargo holds. Specific projects include:

***Aircraft Vulnerability Tests Project*** – Assesses the vulnerability of narrow- and wide-body aircraft passenger cabins and cargo holds to explosives. These vulnerability assessments will analyze blast/damage effects of explosives and determine how much HME causes catastrophic damage to various aircraft types. The assessments will also identify the detection limits for screening systems. In FY 2009, the project delivered computational models to predict aircraft vulnerability to HME threats at various locations within passenger cabins and cargo holds. In FY 2010, the project will test full-scale effects of aircraft vulnerability on narrow-body overhead bins, wide-body and narrow-body window-belts, and wide-body and narrow-body lavatories. In FY 2011, the project plans to complete validation of aircraft vulnerability codes for relatively simple phenomena, including testing flat panels and curved reinforced panels.

**Explosives Research Thrust Area** – Conducts basic research to support the integrated execution of the S&T Directorate’s responsibilities for explosives detection and mitigation to support future customer needs

*Explosives Research Program* – FY 2010: \$8.717 million; FY 2011 estimate: \$9.113 million. Improves explosive-detection capabilities by performing multi-disciplinary R&D in imaging, particle physics, chemistry, and algorithms. Through this work, the program will develop enhanced detection capabilities and next-generation detection systems.

*Algorithm and Analysis of Raw Images Project* – Develops a non-proprietary database of explosive-detection images, which the project will provide to all detection-program participants. Collects and consolidates images from commercial vendors and coordinates the purchase of additional images and data from CT, EDS, Trace, and emerging devices, including novel explosives and other technologies. The evaluation of these images will help determine the causes of false alarms over many types of scanning systems. In FY 2009, the project completed preliminary research and data analysis to identify the potential application to customer capability gaps and detection programs. In FY 2010, the project will investigate x-ray analysis applied to image science in detecting explosives. In FY 2011, the project plans to investigate neutron analysis applied to image science in detecting explosives.

*Detection Technology and Material Science Project* – Employs the latest advances in high-performance materials to enhance aircraft survivability in the event of an on-board blast. The project will study blast-resistant materials, develop, and implement advanced materials within aircraft to reduce the effects of an explosive detonation, including the attenuation of the explosive shock wave and containment of blast fragmentation (shrapnel). In FY 2009, the project investigated legacy material characteristics to improve protection of people, conveyances, and infrastructures. In FY 2010, the project will exploit biosciences for novel detection capabilities. In FY 2011, the project plans to investigate applications of nanotechnologies in advanced detection systems.

*Fundamental Particle Physics Project* – Researches phenomenology to best exploit particle behavior and properties to improve technology. This fundamental research can lead to the development of new sampling technologies and the enhancement of current technology. Advances in understanding particle behavior can potentially lead to the next generation of sampling technologies. In FY 2009, the project conducted preliminary data analysis in advanced signature and detection concepts. In FY 2010, the project will investigate chemical and physical phenomenon at surfaces of explosive particles. In FY 2011, the project plans to determine fundamental properties of surfaces of specific novel explosive threats.

*Liquid and Homemade Explosives Chemical Characterization Project* – Identifies and quantifies the physical and chemical properties of HME as part of an ongoing effort to counter this increased threat. This project will identify explosive properties including

density, dielectric constant, chemical composition, molecular structure, and thermal decomposition rates of products. In FY 2009, the project continued work on hydrogen peroxide and related HME threats. In FY 2010, the project will determine fundamental chemical and physical properties of specific novel explosive threats. In FY 2011, the project plans to assemble a data matrix of specific novel explosive threats.

**Counter IED and Domestic Explosives Threats Thrust Area** – The S&T Directorate coordinates with interagency partners, such as DOD and DOJ, to maximize resources and minimize duplication. While DOD’s program focuses on the battlefield needs, the S&T Directorate’s program actively seeks to incorporate DOD technologies where they have relevant impact against domestic threats. DHS investments provide amplification to DOD and DOJ programs to ensure we address major operational gaps in domestic IED defense. Additional partners and customers include the Office for Bombing Prevention (OBP), United States Secret Service (USSS), Transportation Security Administration (TSA), and State and local entities.

The Counter IED thrust area develops science-based knowledge and technologies that will counter the threat of explosive attacks in our homeland in support of Homeland Security Presidential Directive (HSPD)-19 and its resulting National Strategy for Improvised Explosive Devices, which calls for “the detection of, protection against, and response to terrorist use of explosives in the United States”. The S&T Directorate has a balanced, long-term, basic research and technology development program to deliver critical Counter-IED technologies and knowledge products to address three major domestic threats: person-borne IEDs, vehicle-borne IEDs, and devices targeting valuable infrastructure. In addition to leveraging existing multi-agency Counter-IED investments from Department of Defense (DOD), NPPD’s OBP, USSS, TSA, and CBP, C-IED has incorporated related projects from the Explosives, Human Factors, and Infrastructure and Geophysical Divisions to advance efforts in this area. The C-IED Thrust Area carries out its activities through five program areas: Prevent/Deter; Predict; Detect; Mitigate; and Crosscutting.

The Domestic Explosives Threats thrust area develops advanced technologies for detection, response, and defeat of explosive threats to the Nation’s mass transit, maritime transportation, and other intermodal transportation systems. This thrust area is focused on enhancing explosive-threat detection screening for people, vehicles, carry-on and leave behind items in intermodal (non-aviation) transportation modes. The Domestic Explosives Threats Thrust Area includes the following programs: Detect and Respond/Defeat.

***Prevent/Deter Program*** – FY 2010: \$2.800 million; FY 2011 estimate: \$3.650 million. Conducts social and behavioral science research to identify indicators of future violent extremism in the U.S. and to assess the efficacy of intent-focused prevention efforts. This program has one project, Actionable Indicators and Countermeasures, which addresses multiple aspects of IED prevention and deterrence.

***Actionable Indicators and Countermeasures Project*** – Aids the intelligence and law enforcement communities by developing and validating a framework that integrates

multiple indicators to assess whether individuals, groups, and communities are moving toward engaging in extremist violence in the U.S. It will also systematically assess international and domestic efforts developed to prevent violent extremism to provide policymakers with scientifically sound information on which they can base response and prevention strategies. In FY 2009, the program produced final reports analyzing terrorists' use of IEDs and five international de-radicalization programs. These reports provide a baseline understanding of the nature of the IED threat posed to the U.S. and discuss five current approaches to countering violent extremism. In FY 2010, the project will identify characteristics that distinguish the rhetoric of violent and non-violent Jihadi groups. In FY 2011, the project plans to field test communication and outreach strategies aimed at countering violent extremism in the U.S.

***Predict Program*** – FY 2010: \$6.250 million; FY 2011 estimate: \$4.890 million.

Develops technologies that will automatically identify, alert on, and track suspicious behaviors that precede a suicide bombing attack to secure U.S. borders, transit portals, and special security events. This technology will automatically identify and prioritize the risk of potential targets of attack. The program also develops technologies to rapidly and automatically identify IED targets and staging areas within the U.S. These capabilities will enhance the people-screening capability of DHS customers by reducing their reliance on subjective processes.

***Predictive Screening Project*** – Develops technologies to automatically identify, alert authorities to, and track suspicious behaviors that precede suicide-bombing attacks. The S&T Directorate will test technologies at ports-of-entry, transit portals, and special events. Operational benefits derived from predictive screening include increased probability of identifying suicide bombing behaviors before an attack occurs; significant expansion of active surveillance within a target environment; and increased deterrence of travelers carrying illegal weapons and false documents. In FY 2009, the project used knowledge elicitation (an interviewing technique) with eyewitnesses and operational experts to prepare for experiments in an operational setting. In FY 2010, the project will conduct operational testing of semi-automated tracking of designated suspicious behavior. In FY 2011, the project plans to deliver a final validation report on observable behavioral indicators of suicide bombing attacks.

***Risk Prediction Project*** – Develops technology to rapidly and automatically identify potential IED targets and staging areas within the U.S. This project will leverage existing geo-behavioral pattern discovery algorithms from overseas attacks. These algorithms coupled with an understanding of domestic infrastructure, terrorist tactics, and demographic data, will identify U.S. vulnerabilities. In FY 2009, the project analyzed and developed multi-cultural data sets related to IED use and began operational tests at customer sites. In FY 2010, the project will deliver a final test and evaluation report, benchmarking the performance characteristics of existing technologies, and deliver an interim architecture for integrated geospatial, social, and anomaly detection technologies. In FY 2011, the project plans to insert algorithms and/or software into a C-IED operational test bed.

***Detect Program*** – FY 2010: \$45.537 million; FY 2011 estimate: \$42.923 million.

Conducts research on underlying science for advanced approaches to IED and explosives detection and develops advanced technologies to detect explosive threats to the Nation's aviation, mass transit, rail, ship transportation systems, and intermodal transportation modes. Activities in this program will:

- Improve existing explosive-detection methods;
- Enhance explosive-threat detection for intermodal transportation modes;
- Develop new detection methods for screening people, packages, and vehicles; and
- Ensure high throughput screening capability for people and commerce.

This program includes funding for both basic research and transition. It supports projects that address four specific aspects of IED detection: Person-Borne Improvised Explosive Device (PBIED) Detection, Technology Demo/System Integration, Vehicle-Borne Improvised Explosive Device (VBIED) Detection, and Standards.

*Person-Borne Improvised Explosive Devices (PBIED) Detection Project* – Investigates technologies capable of detecting all types of explosive threats such as homemade, commercial, and military explosives. In FY 2009, the project continued basic research efforts, including advancing scientific understanding behind deposition, sampling, removal, and trace detection of explosive particles on people and packages. The project also explored fundamental science behind explosive particle behavior for insight into sampling technology. The project also expanded contamination studies for non-intrusive sampling and detection of explosive residues, developed algorithms for fusing multiple detection technologies, and investigated increased automation for PBIED detection. In FY 2010, the project will develop basic standalone-detection prototypes using spectroscopic technologies and demonstrate a laser system for broad bandwidth dynamic control. In FY 2011, the project plans to develop a basic prototype of standalone technologies using spectroscopic sensors to detect both “explosives” and “explosive device components” for the standoff detection of PBIEDs.

*Technology Demo/System Integration Project* – Consolidates work with First Responders, State and local public safety officials, and Federal officials to develop a comprehensive plan and venue for technology demonstrations. The project also leverages its partnerships to determine and validate system-integrated technologies to detect IEDs to improve system performance definition and integration. In FY 2009, the project conducted a larger-scale technology field demonstration. Funding for this project ended in FY 2009.

*Vehicle-Borne Improvised Explosive Devices (VBIED) Detection Project* – Develops technologies to detect or image IEDs within a vehicle. The project also develops technologies to sample and detect explosive residues and components non-intrusively, and fuse multiple technologies to provide automation for VBIED detection. This has the potential to speed screening and enable security screeners to concentrate on high-risk vehicles. In FY 2009, the project conducted contamination studies for sampling and trace detection of explosives residues from vehicles and developed methods to detect threat explosives. In FY 2010, the project will develop a prototype for screening moving

vehicles, as well as a prototype of standalone spectroscopic technologies to detect both explosives and explosive-device components for the standoff detection of VBIEDs. In FY 2011, the project plans to develop a prototype of standalone technologies using spectroscopic technologies to detect both “explosives” and “explosive device components” for the standoff detection of VBIEDs.

*Mass Transit Project* – Assesses and develops technology for the detection of explosive threats to mass transit, passenger rail – including buses, commuter rail transit (i.e. subways or metros), light rail (i.e. trolleys and streetcars), and long-distance rail (i.e. Amtrak) – and heavy rail. The project will develop and demonstrate technology to enable a resilient transit system that leverages public awareness, technology, and layered-security programs, while maintaining efficient flow of passengers. In FY 2011, the project plans to conduct a demonstration of emerging technologies for screening people and leave behinds in the mass transit environment.

*Maritime Transportation Project* – Assesses and develops technology for the detection of explosive threats to the maritime ferry and cruise lines, as well as seaport and marine terminal facilities. The program will develop and demonstrate flexible, layered technology to sustain a secure and efficient maritime transportation system that enables legitimate travelers and goods to move without danger, disruption of commerce, or reduction of civil liberties. In FY 2011, the project plans to conduct a demonstration of emerging technologies for vehicle screening and leave behinds in the maritime environment.

***Respond/Defeat Program*** – FY 2010: \$4.077 million; FY 2011 estimate: \$6.150 million. Develops technologies, tactics, and procedures for bomb squads and other First Responders to improve their effectiveness and increase safety when dealing with explosives threats. Beginning in FY 2010, the program will conduct research and systems development to increase the operational capabilities of the State and local bomb squads to defeat and mitigate explosives threats. The research will focus on a basic understanding of explosives threats to deliver advanced tools and technologies to access, diagnose, and render safe explosives threats.

In collaboration with Federal, State, and local agencies, the S&T Directorate identifies, validates, and prioritizes requirements through an on-going generation and prioritization process. The program consists of the following projects:

*Render Safe/Diagnostics Project* – Increases standoff capabilities, reduces collateral damage, and provides precision disruption and disablement capabilities and techniques. In FY 2009, the project delivered a complete explosive-threat, tool-characterization guide to help bomb technicians make tactical decisions to disable threat devices. Also in FY 2009, the project developed technologies for precision disruption, aiming, and ranging systems to improve explosive threat render-safe capabilities and to assist bomb squads in accessing and analyzing improvised terrorist devices. In FY 2010, the project will transition a decision-support tool for tactical decision making in disabling the threat. In FY 2011, this project moves to the Domestic Explosive Threat Thrust Area.

*VBIED Full Mission Characterization Project* – Quantitatively characterizes the operational parameters for disrupting complete (“full-up”) homemade explosives/fusing and firing VBIED System(s) under realistic conditions for a variety of VBIED and leave-behind IED platform configurations (i.e. car/panel truck/large truck threats) to determine the effectiveness of disruption tools as a function of operational parameters to inform requirements for the development of future disruption tool systems. Disruption techniques needing characterization include manual, overpressure, expulsion, and surgical. In FY 2011, the project plans to evaluate simultaneous overpressure charge to truck cab and trailer as well as the effects of an expulsion charge on a truck trailer.

*PBIED Directed Energy Response Project* – Investigates innovative approaches and novel concepts that can use high-power electromagnetic phenomenology for future applications relating to directed-energy (DE) systems to attack PBIEDs. In FY 2011, the project plans to assess DOD directed-energy research/systems to establish a design basis for DHS PBIED threat scenarios.

*Defeat Project* – Conducts R&D to better respond to and defeat explosive threats. This project will develop technology to defeat explosive threats without activating them – preventing detonation and collateral damage. In FY 2009, the project began to characterize various disruption techniques. The S&T Directorate uses these techniques to identify specific requirements for disruption tools needed during large-scale explosive threats. In FY 2010, the project will continue disruption-tool characterization using overpressure threat defeat techniques and develop a system capable of penetrating a simulated vehicle wall without initiating reactive material. Also in FY 2010, this project will develop standoff technologies that allow the bomb technician to remain outside the blast zone of an explosive device. This system will provide remote access to large-scale threats. Additionally, in FY 2010, this project will develop technologies to enable public-safety bomb-squad technicians and divers to disrupt and defeat water-borne explosives threats (including devices attached to port infrastructure and small craft used as explosive devices). In FY 2011, this project plans to complete assessment of alternatives for identifying bomb-making capabilities within suspected terrorist cells.

*Electronic Countermeasures (ECM) Project* – Improves the technology used to counter Radio-Controlled Explosive Threats, by providing a secure and safe radius of operations. In FY 2010, the project will improve and enhance current State and local countermeasures capability by: 1) developing enhanced waveforms and jamming algorithms (load sets) that can effectively address the challenges defined by the Domestic Radio-Controlled Explosive Threat List; 2) optimizing the selected waveform, testing, and validating operational load sets for current ECM systems; and 3) examining potential improvements to antenna, amplifier, receiver, and signal processing technologies. In addition, the project plans to provide an evaluation of COTS ECM systems to identify those that may support future domestic ECM operations. In FY2011, this project will test and evaluate current ECM equipment to ensure compatibility with bomb squad robotics and communications systems.

*Render Safe/Diagnostics Project (Previously a project in the Counter IED Thrust Area, the Render Safe/ Diagnostics Project will fall under the Domestic Explosive Threat Thrust Area in FY 2011)* – Increases standoff capabilities, reduces collateral damage, and provides precision disruption and disablement capabilities and techniques. In FY 2009, the project delivered a complete explosive-threat, tool-characterization guide to help bomb technicians make tactical decisions to disable threat devices. Also in FY 2009, the project developed technologies for precision disruption, aiming, and ranging systems to improve explosive threat render-safe capabilities and to assist bomb squads in accessing and analyzing improvised terrorist devices. In FY 2010, the project will transition a decision-support tool for tactical decision making in disabling the threat. In FY 2011, this project plans to deliver and conduct an evaluation of diagnostics camera/optics equipment.

**Mitigate Program** – FY 2010: \$7.491 million; FY 2011 estimate: \$6.150 million. Reduces the effects of undetected bombs that cannot be rendered safe through practical and available means. This program includes the protection of high-value or prominent buildings and infrastructure, and addresses methods to help communities prepare for, respond to, and recover from IED attacks. The program area contains the following projects: Blast-Resistant Materials, Bridge Vulnerability, Enhanced Blast in Urban Canyons, Blast Analysis of Complex Structures, Stabilization of Damaged Structures, Active Blast Protection, and Community Resilience.

*Blast-Resistant materials* – Develops proof-of-concept material technologies to mitigate the explosive/blast force and fragments from an IED. This project includes basic research studies on advanced blast-resistant materials with properties that provide added protection to high-value structures that are likely targets of IED attacks. This includes new materials and deflecting structures that reduce damage to critical infrastructure and/or personnel. In FY 2009, the project initiated material properties studies to improve understanding of blast resistance and performed experiments on materials to protect against high-velocity, kinetic energy, penetrator-type weapons. In FY 2010, the project will characterize new materials to define their critical blast-resistance properties. In FY 2011, the project plans to evaluate materials to protect against high-velocity kinetic-energy penetrators.

*Bridge Vulnerability Project* – Develops an understanding of the vulnerabilities of different types of bridges. Provides more accurate vulnerability information for aging bridges and improves existing numerical models to predict failure of bridge components. The project is using the Waldo Hancock Bridge, a suspension bridge, completed in 1931 and now scheduled for demolition, for homeland security research on potential effects of an IED attack against a bridge. This effort is a partnership with the Maine Department of Transportation (DOT) and the Federal Highway Administration. In FY 2009, the project developed strategies for recovering key components (sections of the bridge towers, cables, and suspenders) from the Waldo Hancock Bridge. In FY 2010, the project will continue planning for recovering Waldo Hancock components and develop a plan for explosive testing to assess critical bridge vulnerabilities. In FY 2011, the project plans to perform blast experiments on bridge components. The project also plans to remove

components from the Waldo Hancock Bridge and include them in these experiments, pending the bridge demolition schedule.

*Enhanced Blast in Urban Canyons Project* – Characterizes the effect of IED events in urban canyons (i.e., city landscapes populated with tall buildings). This project also develops a high-quality database of blast overpressure measurements to refine numerical models to accurately predict the complicated reflection, diffraction, and diffusion of blast waves in these scenarios. It is critical to characterize the explosive air blast in an urban environment accurately to predict casualties and building damage, develop structural retrofits and blast mitigation methods, and plan response operations. The S&T Directorate collaborates with the Technology Support Working Group on this project. In FY 2009, the project investigated instrumentation for large-scale blast testing with enhanced novel explosives, such as those containing aluminum particles, and developed a test plan. In FY 2010, the project will conduct a series of half- to full-scale explosives tests in a wide range of simulated urban environments. In FY 2011, the project plans to perform the second phase of urban blast experiments.

*Blast Analysis of Complex Structures Project* – Develops computational tools to quickly calculate structural responses to a range of explosives. Provides methods for blast engineers to calculate blast loads in dense urban environments and perform calculations to estimate the relationship between an overcast sky and blast loads. In FY 2009, the project performed nonlinear, explicit, dynamic, finite-element analyses on a variety of structural systems to determine the response to blast loading in dense urban environments and the potential for developing progressive collapse of a building. In FY 2010, the project will conduct a detailed investigation of air blast interaction with novel curtain walls, such as blast-resistant glass and laminated glass in urban environments. In FY 2011, the project plans to deliver a database of structural blast loads on urban buildings.

*Stabilization of Damaged Structures Project* – Develops technologies that will research priorities to fill gaps on building stabilization and investigates materials that might stabilize a building after an IED attack. In FY 2009, the project created a Technical Committee for the Stabilization of Buildings. In FY 2010, the project will create a research clearinghouse of available technologies to help stabilize buildings. Also in FY 2010, the project will conduct up to three product test simulations based on preliminary computer and small-scale lab evaluations of repaired structure elements. In FY 2011, the project plans to conduct test simulations for building stabilization technologies.

*Active Blast Protection Project* – Researches materials used to protect infrastructure and buildings in case of an IED attack. The project will develop new materials that enhance the performance of existing structures and buildings, making them increasingly more energy-efficient, environmentally friendly, and multi-hazard resistant, with self-healing and self-monitoring capabilities. In FY 2009, the project issued a report on Advanced Materials and Counter-IEDs Effects. In FY 2010, the project will report on ultra-high-performance concrete (UHPC) and explore emerging active-blast materials. In FY 2011, the project plans to produce a material characterization report for UHPC and pursue testing and analysis of active protective materials that show merit.

*Community Resilience Project* – Conducts research into methodologies for effective hazard and risk communications to enhance the ability of local officials to convey understandable and credible warnings of IED activity to the public. This project will help local government and civic officials understand how to properly frame risk warnings and post-event instructions to maximize the public’s understanding of the information while maintaining public trust and confidence. In FY 2009, the project developed a plan to address risk communications for an IED event, incorporating all the programmatic elements required to produce a simulation-based training system for local officials. In FY 2010, the project will issue a preliminary report detailing the current understanding of risk perception and hazard and risk communication. The report will also provide preliminary guidelines to government and civic officials for effective IED communication strategies. It will validate the preliminary guidelines against historical events, experiential reasoning, and expert knowledge among authorities in terrorism, risk perception, media communications, and public administration. In FY 2011, the project plans to field and test a prototype simulation-based system that will permit officials to develop, evaluate, and train hazard/risk communication strategies at the local level.

***Crosscutting Program (formerly CIED-PEO)*** – FY 2010: \$1.187 million; FY 2011 estimate: \$0.297 million. Funds R&D efforts that cross over more than one of the programs within the Counter-IED Thrust Area. The program area contains a strategic plan, Long Range Broad Agency Announcement (BAA), and Community Perceptions of Counter-IED Technology project.

*Strategic Plan/Roadmap* - Assists in developing a DHS S&T Directorate investment strategy linking S&T C-IED programs to the 10 operational needs identified by the National Science and Technology Council’s (NSTC) Subcommittee on Domestic Improvised Explosive Devices as “the most critical priorities”. Funding for the roadmap ends in FY 2010 to fund specific projects based on recommendations from the S&T Directorate’s internal IPT process.

*Long Range Broad Agency Announcement (BAA)* - In FY 2009, the Long Range BAA effort funded the “Neutralization of Vehicle-Borne Improvised Explosive Devices (VBIED) using a percussion-actuated nonexplosive (PAN) Disruptor Bullets” program through the University of Texas at Austin’s Institute for Advanced Technology. This program builds upon a successful feasibility program funded by the National Institute of Justice (NIJ). In FY 2010, the project will design and demonstrate a PAN launched reactive material projectile that reliably produces render-safe solutions for VBIED targets. In FY 2011, project funding for this effort will focus on program reviews and recommendations from the S&T Directorate’s internal IPT process.

*Community Perceptions of Counter-IED Technology Project* – Conducts focus groups and survey analysis to improve the understanding of public perception regarding IED countermeasures to ensure the delivery of more acceptable and effective C-IED methods and technologies. Focused panel workshops will help analyze community perceptions of C-IED strategies and technologies. Researchers will use qualitative workshop results to

develop a broad-based, quantitative survey to capture community implications from a larger, more diverse population. The results will inform program managers and technology developers, enabling them to construct more acceptable and effective Counter-IED solutions. In FY 2010, under the Respond/Defeat program, the project will conduct and report on two Community Perceptions of Technology (CPT) panels. In FY 2011, the project plans to conduct two CPT Panels and provide analyses resulting in guidance documents.

**Department of Homeland Security**  
**Science & Technology**  
**Research, Development, Acquisitions, and Operations**  
**Human Factors**  
**Program Performance Justification**  
(Dollars in Thousands)

**PPA: Human Factors**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2009 Actual</b>	-	-	<b>11,324</b>
<b>2010 Enacted</b>	-	-	<b>16,087</b>
2011 Adjustments-to-Base	-	-	94
<b>2011 Current Services</b>	-	-	<b>16,181</b>
2011 Program Change	-	-	(2,746)
<b>2011 Total President's Budget</b>	-	-	<b>13,435</b>
Total Change 2010 to 2011	-	-	(2,652)

The Science and Technology (S&T) Directorate requests \$13.435 million for Human Factors; of this amount, \$0.336 million supports the Small Business Innovation Research (SBIR) Program. The decrease of \$2.652 million due to a reprioritization of resources by the department.

**CURRENT SERVICES PROGRAM DESCRIPTION**

The Human Factors Division applies the social, behavioral, and physical sciences to improve the detection, deterrence, analysis, and understanding of threats posed by individuals, groups, and radical movements. This division supports the preparedness, response, and recovery of communities impacted by catastrophic events and advances homeland security capabilities by integrating human factors into the development and deployment of homeland security technologies. The division also develops and tests biometrics-based technologies to identify known terrorists and criminals and prevent their movement into, out of, or within the United States, while reducing delays of legitimate travelers.

The Division's primary Federal customers include Customs and Border Protection (CBP), Federal Emergency Management Agency (FEMA), Immigration Customs Enforcement (ICE), Transportation Security Administration (TSA), U.S. Coast Guard (USCG), U.S. Citizenship and Immigration Services (USCIS), Office of Intelligence and Analysis (OIA), and U.S. Secret Service (USSS). End users include Federal, State, and

local emergency management officials, First Responders, and private sector infrastructure owners and operators.

**Human Technology Integration Thrust Area** – Improves the effectiveness of DHS technologies through independent research and by working with S&T Directorate divisions and DHS components to incorporate the needs of technology users – including operators, maintainers, and the public at large – into the research, design and development of technology from its inception. The thrust area promotes research, development, and deployment processes that build on and take account of what is known about human capabilities and limitations; increases levels of satisfaction with and acceptance/adoption of useful technologies; mitigates program risks; reduces costs; and enhances system safety, efficiency, and effectiveness. Projects within this thrust enhance the capacities of technology users and ensure public trust in technologies, with due regard for privacy, civil rights and civil liberties.

***Human Systems Research and Engineering Program*** – FY 2010: \$1.580 million; FY 2011 estimate: \$1.508 million. Incorporates human systems integration activities into contracts, planning, and execution of DHS research and development (R&D) to ensure that components are conducting human-systems integration analysis, design, and test activities throughout the system life cycle. This program also conducts research in human-systems integration to better understand the underlying cognitive, behavioral, and physiological processes that affect human performance. Projects supporting this program are Human Systems Engineering and Human Systems Research.

***Human Systems Engineering Project*** – Develops and defines requirements for systems, technologies, methods, and measures to evaluate the adequacy with which new and existing technologies and systems address human-performance needs. This project is developing a human-systems integration roadmap that will aid the S&T Directorate's divisions and DHS components to identify, develop, and apply a standard process to enhance technology and system design, system safety, and operational efficiency. In FY 2009, the project established a DHS-wide Human Systems Integration Community of Practice that provides a forum for information exchange across all DHS components. The project also incorporated human systems integration into DHS Acquisition Policy and established DHS Acquisition and RDT&E frameworks. In FY 2010, the project will demonstrate the process for identifying human-performance requirements and risks in the design and development of technologies and systems for five DHS programs/projects. In FY 2011, the project plans to apply and continue to improve human-systems integration processes on an additional five DHS programs/projects.

***Human Systems Research Project*** – Develops ways to maximize human performance in screening-related tasks and activities. This project explores brain-based sensor technology and how it can provide real-time cognitive state and operational-performance feedback for customized training and personnel selection. In FY 2009, the project reviewed existing brain-based sensor technologies to determine applicability and identified five candidate systems for further evaluation and development. In FY 2010, the project will review the five systems, select one, and evaluate it in a simulated training

situation. In FY 2011, the project plans to analyze algorithms associated with the selected system and conduct additional analyses of ways to enhance screener performance.

***Technology Acceptance and Integration Program*** – FY 2010: \$0.350 million; FY 2011 estimate: \$0.450 million. Researches public perceptions of new technologies and processes to: 1) identify factors that can advance or impede technology deployment and 2) to identify adjustments to technologies and processes that make them more effective in achieving their intended purposes. This research generates knowledge that drives process improvement and guides the development and deployment of technologies to optimize public acceptance.

***Community Perceptions of Technology (CPT) Panel Project*** – Brings together representatives of industry, public interest groups, community organizations, and citizens with subject-matter experts to understand and integrate community perspectives and concerns in the development, deployment, and public acceptance of technology. In FY 2009, the project coordinated three panels. One panel focused on Acoustic Non-Linear Standoff Threat Detection; the second, in conjunction with the Canadian government, examined Radio Frequency Identification (RFID) vehicle registration and Low-Resolution Imaging for improved Northern Border Security; and the third panel focused on Standoff Imaging technologies. Panel responses work to ensure acceptance of the technologies within affected communities and aid program managers in technical design for deployment to an operational environment. In FY 2010, the program will coordinate two to four panels. In FY 2011, the project plans to conduct another two to four panels, and deliver expert assessments of public perceptions of national security measures in relation to civil liberties and privacy issues.

**Personal Identification Systems Thrust Area** – Develops accurate and near real-time capabilities to identify known terrorists and criminals at U.S. checkpoints while facilitating the movement of legitimate travelers.

***Biometrics Program*** – FY 2010: \$4.175 million; FY 2011 estimate: \$4.586 million. Develops biometrics-based technologies to identify known terrorists and criminals and prevent their movement into and out of the U.S. through effective, interoperable multi-biometrics in diverse areas, including border crossings, ports-of-entry, and visa application sites. Projects in this program are Multi-modal Biometrics and Mobile Biometrics System.

***Mobile Biometrics System Project*** – develops technologies for mobile biometrics screening at remote sites along U.S. borders, at sea, and other areas not near a processing station. HFD worked with CBP, TSA, USCIS, USVISIT, USCG, USSS and ICE field operators to define and prioritize Mobile-Biometrics technology requirements. In FY 2009, the project defined functional requirements and initiated a spiral development of a four-finger slap mobile module, enabling DHS operators to quickly take 10 prints in the field and increasing the likelihood of positive identification. In FY 2010, the project will develop components for a future Mobile Biometrics Device. In FY 2011, the project

plans to demonstrate those components and a Multi-modal Mobile Biometrics System prototype.

*Multi-modal Biometrics Project* – Delivers a department-wide capability to non-intrusively collect two or more biometrics (e.g., fingerprint, face image, and iris recognition) in less than 10 seconds at a 95% acquisition rate without impeding the movement of individuals. This project provides robust, standards-based, interoperable multi-modal biometric technologies to identify dangerous individuals accurately and rapidly. This project will develop technology that will support entrance and exit solutions that US-VISIT will need to provide to the Office of Field Operations (OFO) within CBP. In FY 2009, the project awarded a phase two SBIR contract to develop a contactless multi-modal biometrics identification prototype and to create a corresponding reference dataset. In FY 2009, it also initiated work to reduce DNA processing time from weeks to less than an hour and the processing cost from \$500 to less than \$100, which will allow verification of family relationships (kinship) and identification of criminals among those seeking asylum. In FY 2010, in conjunction with the National Institute of Standards and Technology (NIST) and other Federal partners, the project will perform field evaluations of biometric technologies and sponsor the development of voluntary consensus standards to improve performance. The project will also analyze the performance of biometric technologies against DHS operational components' performance requirements. In FY 2011, the project plans to focus on iris-image biometric technologies, conduct an iris-quality evaluation and calibration study, and develop test protocols to allow accredited third-party laboratories to evaluate biometric vendor products based on DHS performance requirements. In FY 2011, the project also plans to deliver a prototype rapid and low-cost DNA-based screening system.

**Social Behavioral Threat Analysis Thrust Area** – Improves the detection, analysis, and understanding of threats posed by individuals, groups, and radical movements using theory and data from the social and behavioral sciences. The thrust area conducts research addressing the psychological, social, and economic impacts of catastrophic events to inform risk analyses, risk communications, community and individual preparedness, response, resiliency, and recovery efforts. Programs within this thrust area include: Community Preparedness and Resilience; Motivation and Intent; and Suspicious Behavior Detection.

*Community Preparedness and Resilience Program* – FY 2010: \$1.200 million; FY 2011 estimate: \$0.830 million. Conducts analytical research to enhance the ability of the public and government to support communities in preparing for, responding to, and recovering from catastrophic events. The program includes the following projects: Enhancing Public Response and Community Resilience; Quantitative Psychosocial Impacts Index; Resilient Social Networks; and Risk Perception, Public Trust and Communication.

*Enhancing Public Response and Community Resilience Project* – Makes empirically based recommendations about prioritizing and addressing public needs using data generated during hurricanes Katrina and Rita. The project will capture and communicate

lessons learned to enhance Federal, State, and local responses to future catastrophic events. In FY 2009, the project provided a report detailing a temporal analysis of needs for shelter, food, and disaster relief requested by callers to the Texas 2-1-1 System. In FY 2010, the project will report on a geospatial analysis of needs for shelter, food, disaster relief, and other services. This analysis will enable First Responders and response planners to anticipate assistance needs during hurricanes and other catastrophic events and more accurately plan for resource requirements and evacuation strategies. In FY 2011, the project plans to deliver a validated template for national 2-1-1 call systems to standardize preparedness, response planning, and delivery of emergency services and information immediately before, during, and after catastrophic events.

*Quantitative Psychosocial Impacts Index Project* – Produces a quantitative index of the direct and indirect psychological, social, and economic impacts of catastrophic events. A valid quantitative index will improve DHS risk and cost assessments and will help DHS prioritize its preparedness, response and recovery activities. Starting in FY 2010, this project will begin research on the social and behavioral science theory and data needed to model human reactions to disasters and construct a valid index. In FY 2011, this project plans to conduct research to identify indicators related to social disruption and develop a method for testing these indicators using case studies of past events.

*Resilient Social Networks Project* – Examines the application of social network analysis to the identification and strengthening of local social networks within and across the public and private sectors to improve collaboration, planning, response, and recovery at the community level. In FY 2009, the National Research Council (NRC) delivered a report on the state-of-the-art in social network analysis and its applicability to community resilience. In 2010, the NRC will complete a report highlighting research opportunities and methodologies to enhance public and private sector collaboration to strengthen community resilience against natural and man-made disasters. Funding for this project ends in FY 2010.

*Motivation and Intent (M&I) Program* – FY 2010: \$2.015 million; FY 2011 estimate: \$1.715 million. Leverages social and behavioral science research, data, and theory to understand the determinants and timing of group conversions to terrorism and the intent to engage in violence. Knowledge from this program informs analytical, operational, and policy concerns related to terrorists and terrorist activities. The program plans to model likely scenarios for the rise, fall, and activities of groups engaged in violence.

*Violent Intent Modeling and Simulation (VIMS) Project* – Develops tools to assist analysts in determining whether radical groups are likely to engage in political violence. This project builds models and data retrieval systems that will allow analysts to understand how behavioral, social, and organizational factors may contribute to and predict the emergence of violence. In FY 2009, the project verified modeling capabilities; identified reliable data sources for the various VIMS components; assessed analysts needs; and evaluated information extraction and content analysis tools for integration into VIMS. In FY 2010, the project will update VIMS 2.0 to increase user friendliness, better integrate social-science theory and data into the analysis, and will

evaluate additional capacities, like agent-based models, that might improve analysis. In FY 2011, the project plans to begin evaluating the information extraction and content analysis tool for integration into the analytical framework of VIMS.

***Suspicious Behavior Detection Program*** – FY 2010: \$6.365 million; FY 2011 estimate: \$4.010 million. Builds the capability to non-invasively detect suspicious behavior that indicates the intent to cause harm. This program's activities support DHS's operational screening and interviewing missions.

***Hostile Intent Detection-Automated Prototype Project*** – Develops a real-time, non-invasive, multi-modal, and culturally independent, hostile-intent detection prototype to identify unknown or potential terrorists through an interactive process with 75 percent accuracy. In FY 2009, the S&T Directorate demonstrated real-time automated detection of hostile intent in a laboratory setting and transitioned expanded multi-cultural behavioral indicators of hostile intent to TSA. In FY 2010, the project will demonstrate integrated multi-cultural, real-time intent detection. In FY 2011, the project plans to transition multi-culturally validated intent indicators for the Hostile Intent Detection Automated Prototype.

***Insider Threat Detection Project*** – Delivers improved tools to identify behavior patterns and characteristics before, during, and after employment that are associated with insider threats. Starting in FY 2009, this project collaborated with other U.S. agencies and international partners to leverage their work and develop a greater capacity to deter and detect insider threats before the individual can do substantial harm. In FY 2009, the project also launched a market survey of existing insider countermeasure technologies and related behavior research, and developed a program plan to include addressing privacy and legal issues. In FY 2010, the project will assemble enabling data including research, training and testing sets; develop metrics to measure tools and provide linkages to standard threat measurements; and identify behavioral indicators. In FY 2011, the project plans to begin operational testing of an empirical framework. Ultimately, this project will pilot and transition the insider-threat detection tools to critical industrial bases, DHS, and other government agencies.

***Intent Training and Simulation Project*** – Develops a computer-based simulation to train behavior-based, standoff detection of hostile intent in support of screening and interviewing interactions at air, land, and maritime portals. It will leverage the interactive and observational behavioral indicators, as analyzed in the Hostile Intent Detection – Automated Prototype and Validation of SPOT projects, respectively. In FY 2009, the project demonstrated and tested a courseware prototype and transitioned a validated simulation product to TSA. In FY 2010, the project will transition validated cross-cultural upgrades to the classroom and simulation-based training. FY 2010 is the final year of funding for this project.

***Validation of SPOT Project*** – Provides multi-cultural validation of behavioral indicators employed by DHS' operational components to screen passengers at air, land, and maritime ports, including those indicators contained within TSA's SPOT. This effort

complements the automated prototype work and supports development of an enhanced capability to detect behavioral indicators of hostile intent at a distance. The project will integrate these validated behavioral indicators into the screening concept of operations through each component's existing training programs. In FY 2009, this project established protocols for collecting multi-cultural research data and transitioned validated multi-cultural indicators of hostile intent. In FY 2010, the project will insert multi-cultural indicators into the Intent Training and Simulation project and demonstrate a mobile, collaborative collection and reporting tool. In FY 2011, the project plans to develop the final report and transition the optimized indicators and weights to DHS operational screening commands.

<b>2011 Total President's Budget</b>	-	-	<b>36,122</b>
Total Change 2010 to 2011	-	-	(38,836)

The Science and Technology (S&T) Directorate requests \$36.122 million for the Infrastructure and Geophysical Division; of this amount, \$0.903 million supports the Small Business Innovation Research (SBIR) program. The \$38.836 million decrease in FY 2011 reflects a program reduction of \$8.297 million and a nonrecur of \$30.539 million for the Southeast Regional Research Initiative (SERRI) and Community Based Critical Infrastructure Protection Institute. The program decrease reduces S&T's ability to address capability gaps identified by the Federal Emergency Management Agency (FEMA) and other customers representing first responders. The decrease also affects Advanced Materials Design, which is currently working to develop materials with enhanced blast-resistant properties to protect buildings and other critical infrastructure and key resources (CIKR). The S&T Directorate will continue to conduct basic research and develop effective and efficient technologies to support Infrastructure Protection and Incident Management.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Infrastructure and Geophysical Division's (IGD) mission is to improve the Nation's preparedness for and response to natural and man-made threats through superior situational awareness, enhanced emergency response capabilities, and critical infrastructure protection. The Division develops technical solutions and reach-back capabilities to improve Federal, State, local, tribal, territorial, and private sector preparedness for and response to all-hazards events that affect both the U.S. population and critical infrastructure. IGD also develops modeling, simulation, and analysis (MSA) capabilities for communities, regions, and the

Nation, so that they can protect critical infrastructure and key resources. These MSA capabilities examine interdependencies between sectors; determine how various scenarios will affect each sector; provide decision support tools to guide decision makers in identifying gaps and vulnerabilities; and develop predictive tools and methods to aid in preparing for and responding to various catastrophes. The primary Federal customers for IGD are the National Protection and Programs Directorate (NPPD), which includes the Office of Infrastructure Protection (IP), and the Federal Emergency Management Agency (FEMA), which represent end-users such as first responders, critical infrastructure owners and operators, and Federal, State, and local emergency managers.

Successful transition of the technologies managed by this Division will improve Department of Homeland Security (DHS) components' performance and support the Department's Strategic goals.

IGD carries out its activities through three thrust areas: Critical Infrastructure Protection, Preparedness and Response, and Geophysical.

**Critical Infrastructure Protection (CIP) Thrust Area** – Conducts research and development (R&D) activities on the 18 Critical Infrastructure/Key Resource (CIKR) Sectors identified in the *National Infrastructure Protection Plan* (NIPP). This meets IP's requirements, as well as those set forth by Homeland Security Presidential Directive 7 (HSPD-7), *Critical Infrastructure Identification, Prioritization, and Protection*. The NIPP provides the overarching approach for integrating the Nation's many CIKR protection initiatives into a single national effort. The CIKR sectors identified by HSPD-7 and the NIPP are: Agriculture and Food; Banking and Finance; Communications; Chemical; Commercial Facilities; Critical Manufacturing; Dams; the Defense Industrial Base; Emergency Services; Energy; Government Facilities; Information Technology; National Monuments and Icons; Nuclear Reactors, Materials, and Waste; Postal and Shipping; Public Health and Healthcare; Transportation Systems; and Drinking Water and Water Treatment Systems.

***Advanced Surveillance and Detection Systems Program*** – FY 2010: \$5.138 million; FY 2011 estimate: \$5.103 million. Conducts R&D on the surveillance technology for 18 CIKR sectors identified in the NIPP and HSPD-7. The program addresses IP's requirements by automating and increasing the fidelity of tasks currently performed by operators, allowing for detection of subtle changes against a background environment, and incorporating advanced sensors, such as optical, infrared, ultraviolet, and acoustic. The program provides advanced, automated, affordable technologies for monitoring, surveillance, and detection that improve the ability of infrastructure owners and operators to monitor their infrastructure assets efficiently and effectively. The program may also integrate affordable, effective chemical and biological detection equipment into critical infrastructure as appropriate.

***Advanced Surveillance Systems Project*** – Develops advanced surveillance technologies for critical infrastructure to detect intrusion, casing, and other physical disruption. The project will focus on reducing work force requirements by replacing operator-dependent

monitoring of large numbers of cameras with systems that incorporate advanced algorithms to provide high-fidelity anomaly and change detection. The project will design systems to interpret information from multiple surveillance modes (such as closed-circuit television cameras, infrared cameras, intrusion detection alarms, acoustic sensors) and provide actionable information to infrastructure operators. In FY 2009, the project analyzed surveillance architectures for two CIKR sectors – Dams and National Monuments and Icons – to assess currently deployed technologies, constraints presented by different operational environments, and opportunities to integrate existing technologies, and to identify areas where future research and development could benefit CIKR owners and operators. In FY 2010, the project will further develop system components for practical use at a chosen infrastructure site and demonstrate advanced surveillance technology. In FY 2011, the project plans to continue to conduct research on key sensors and algorithms to support advanced surveillance.

*CIP Advanced Requirements Development and Studies* – Engages critical infrastructure Sectors and Sector Specific Agencies (SSAs) in IP, regional consortiums, and owner/operators to assess the current state-of-the-art and establish requirements to develop advanced technologies within this program. This project teams customers with experts to develop those requirements and enables them to identify any existing innovative capabilities that will meet the customers' needs. These investments, at the early stages of technology acquisition, improve chances of project success and increase project efficiency. In 2010, this project will initiate the application of surveillance data-aggregation tools and other leading-edge technologies; this will quickly integrate surveillance systems with change and anomaly-detection, information-management systems to improve multi-jurisdictional coordination. Funding ends in FY 2010.

*Underwater Surveillance – Dams and Tunnels Project* – Provides advanced, automated, affordable underwater monitoring and surveillance technologies to detect underwater threats against dams and tunnels. Since these structures are particularly vulnerable to a water-borne attack, detecting suspicious activity is critical to asset protection. These technologies must be capable of operating in harsh environments for extended periods, and be both seamlessly and transparently integrated into existing infrastructure security operations. In FY 2009, the project identified, prioritized, and selected potential solutions for underwater surveillance, based on cost, performance, and integration. In FY 2010, the project will adapt identified technologies to specific requirements for underwater infrastructure. In FY 2011, the project plans to complete a final report on bubble jetting with final recommendations for underwater surveillance standoff.

*Underwater Surveillance Project* – Conducts basic research to support the Underwater Surveillance - Dams and Tunnels project. It will study bubble jetting resulting from underwater explosions and its impact on vertical structures (such as dam spillway gates and navigation locks), and then determine appropriate standoff distances for submerged targets, thus defining which areas require surveillance. The lack of fundamental knowledge of underwater blast effects currently limits researchers' ability to define parameters for effective underwater surveillance. This research will have the added benefit of informing effective design of blast mitigation measures for underwater targets.

In FY 2009, the project evaluated numerical codes that simulate underwater blasts and conducted scaled testing of underwater blasts. In FY 2010, the project will conduct large-scale physical testing to describe bubble jetting and inform numerical codes. In FY 2011, the project plans to continue developing an understanding of forces and systematic approaches for rapidly repairing gates/dams/locks fighting against high headwater flows.

***Community Based Critical Infrastructure Protection Institute Program*** – FY 2010: \$9.894 million; FY 2011 estimate: \$0.000 million. Supports university and private industry partnerships to develop community-based homeland security technologies and mature them so that they can become commercially viable. Projects in this program are diverse and include capabilities for continuous monitoring of beef cattle; monitoring and securing milk from farm to processor; advances in less expensive biometrics for iris and handprint imaging; and development of affordable nano-materials for blast mitigation.

***Modeling, Simulation, and Analysis Program*** – FY 2010: \$3.293 million; FY 2011 estimate: \$3.200 million. Develops modeling, simulation, and analysis capabilities to improve decision makers' ability to evaluate threats to CIKR and changes to risks, including interdependencies. This capability will help public service and private industry policy and decision makers, owners/operators, planners, and responders understand the consequences of policy and investment options before they enact solutions, and while they provide support during crises. The program will enable:

- Rapid examination of interdependencies;
- Trade-offs between risk reduction benefits and protective action costs;
- Incorporation of threat information;
- Vulnerability assessments; and
- Understanding of disruption consequences (including cascading effects).

***Complex Event Modeling, Simulation, and Analysis Project (CEMSA)*** – Examines the interdependencies, cascading effects, and the dynamics of multi-event and multi-vector attacks. This effort will provide significant improvements in timelines, quality, and usability of information to provide decision makers real-time information to make informed decisions during an event. The project leverages the capabilities developed for Critical Infrastructure Protection Decision Support System (CIPDSS) and sector-specific MSA. In FY 2009, the program continued to develop CEMSA based on the architecture design started in FY 2008, updated databases, and focused on the systems-level design and interfaces of the technology. In FY 2010, the project will conduct proof-of-concept and feasibility test of the critical infrastructure protection analytical capability. In FY 2011, the project plans to continue this effort, working towards demonstrating the capability to analyze interdependencies and cascading effects.

***The National Critical Infrastructure Protection R&D Plan Program*** – FY 2010: \$0.706 million; FY 2011 estimate: \$0.635 million. The S&T Directorate prepares an annual update to the *National Critical Infrastructure Protection Research and Development Plan* (NCIP R&D Plan), as required by HSPD-7. This plan supports the implementation of the *National Infrastructure Protection Plan* (NIPP), and by corollary, the supporting Sector Specific Plans (SSPs), the Sector Annual Reports, and the National Annual Report

(NAR) in collaboration with IP. The NIPP, the SSPs, the NAR, and the NCIP R&D Plan integrate near-term (i.e. NIPP), mid-term (i.e., SSPs), and long-term (i.e. NCIP R&D) research objectives to form a coordinated approach to technology development to meet sector infrastructure protection goals and work toward a national vision of a secure homeland. In FY 2010 and FY 2011, the program will continue to update the plan based on advances in technology. All these activities will be closely coordinated with the NPPD, the SSAs (as designated by HSPD-7), private industry through the NIPP Coordinating Council System, and all other agencies involved in funding R&D relevant to CIP, including international technical collaboration through the agreements established by the S&T Directorate.

***Protective Technologies Program*** – FY 2010: \$11.741 million; FY 2011 estimate: \$7.914 million. Conducts research on sector-specific and region-specific needs identified by IP or requested from CIKR SSAs, as designated by HSPD-7 and the NIPP. The primary customer for these technologies is IP, although end-users may include the SSAs, State and local governments, and, in some cases, the private sector. The program is developing revolutionary capabilities to protect the Nation's most vital critical infrastructure against blast loads and blast effects, such as shrapnel, flying debris fragments, and fire. The program will enable infrastructure owners and operators to implement effective, affordable, and reliable materials, design procedures, and innovative construction methods to reduce the risk to critical infrastructure assets. The following projects support this program.

***Blast/Projectile – Advanced Materials Design Project*** – Conducts basic research in conjunction with existing Federal investments in nanotechnology and other material-science efforts to develop extremely strong, lightweight, resilient materials. These advanced materials will enable more effective and affordable hardening and increase the resiliency of assets deemed most vital to the safety, economy, and security of the Nation, for both existing infrastructure and new construction. The project will also develop design procedures for using these materials, as well as innovative construction methods. In FY 2009, this project identified and surveyed existing materials to consider the appropriate scale of materials and the appropriate types of numerical analysis codes needed to model these materials at the molecular level. In FY 2010, the project will report on the advanced materials in critical infrastructure protection. Additionally, the project plans to accelerate efforts to identify novel materials for a wide variety of blast protection applications. The project will also continue numerical modeling of material properties and begin development of materials to meet requirements for blast resistance. In FY 2011, the project plans to continue to conduct numerical modeling of material properties.

***Blast/Projectile – Protective Measures and Design Tools Project*** – Provides enhanced and additional protective measures along with design guidance for protecting the Nation's most critical infrastructure assets. The project builds on the basic research conducted through FY 2008. Protective measures could include mechanisms to reduce blast effects, rapid mitigation and restoration technologies, and other defensive measures. In addition, the project plans to numerically analyze designs against blast and projectile

threats and to conduct physical demonstrations to assess their effectiveness. This work will mature and expand existing protective measures by making them less expensive, easier to apply, and more effective, and will develop entirely new materials and design concepts for additional classes of infrastructure. In FY 2009, the project evaluated and matured protective measures for tunnels and began development of protective measures for additional classes of vital critical infrastructure such as bridges, dams, and other classes of CIKR identified by IP. Additionally in FY 2009, the project demonstrated and conducted field experiments of existing and new prototype protection measures for tunnels and bridges. In FY 2010, the project will continue to develop and conduct demonstrations of protective measures and create design guidance for blast protection of high-value assets. In FY 2011, the project plans to analyze and demonstrate additional protective measures for high-value assets.

*Blast/Projectile – Unified Blast Analysis Tool Project* – Develops computational models to assess vulnerability to blast and projectiles and evaluates designs of protective measures for key infrastructure assets. The project will establish a suite of tools that provides accurate, efficient analysis, and models of diverse classes of infrastructure including tunnels, bridges, dams, and complex urban environments. These tools will enable infrastructure owners and operators to efficiently analyze vulnerabilities and inform implementation of affordable, reliable protective measures against blast and projectile threats. In FY 2009, the project began developing improved computational models for blast effects on tunnels, bridges, dams, and urban environments, and conducted experiments to validate the numerical predictions. In FY 2010, the project will continue developing the computational models initiated in FY 2009 and demonstrate a first-generation, fast-running blast analysis tool. In FY 2011, the project plans to demonstrate the second-generation blast/projectile analysis tool for infrastructure protection and transition it to IP.

***Response and Recovery Technologies Program*** – FY 2010: \$5.854 million; FY 2011 estimate: \$3.701 million. Provides automated response and rapid recovery technologies for the Nation's most vital infrastructure assets and their long-lead time components. Activities will focus on infrastructure types with previously unidentified effective, affordable protective measures. The technologies developed in this program will provide all-hazards infrastructure resilience against multiple natural and manufactured threats. Many infrastructure assets need these capabilities to prevent and limit structural failure, and maximize life safety; these measures also add to a layered defense system, further reducing risk. The following projects support this program.

*Rapid Mitigation and Recovery Project – Basic Research* – Develops rapid mitigation and recovery technologies intended to limit damage and consequences for CIKR and to enable the resumption of normal operations quickly after facing a threat. The basic research portion of this project concentrates on longer-term needs and investigates failure mechanisms, damage limitations, and solutions for rapid restoration of service for critical infrastructure such as bridges, tunnels, and dams. The project's current focus is dams built with both concrete and embankment sections. Better analysis of interactions at soil/water/concrete junctions is critical for understanding potential failure modes and determining whether current embankment construction methods provide adequate

resiliency for high-consequence dams. In FY 2009, the project conducted numerical modeling to explore whether the current zoned regions of certain embankments are capable of preventing catastrophic internal erosion through cracks potentially induced by an IED attack or natural hazards. In FY 2010, the project will conduct additional numerical modeling and scaled physical experiments. In FY 2011, the project plans to continue systematic approaches for rapidly repairing gates/dams/locks fighting against high headwater flows.

*Rapid Mitigation and Recovery Project – Transition* – Develops rapid mitigation and recovery technologies intended to limit damage and consequences for CIKR and to enable the resumption of normal operations quickly after facing a threat. The transition portion focuses on IP’s high-priority need for technologies to reduce the effect of natural and manmade disruptions quickly preventing cascading effects specifically related to the release of Toxic Inhalation Hazard (TIH) materials from rail tank cars and stationary storage tanks. Specifically, the project will identify, develop, and assess threat-mitigation technologies and/or procedures that will reduce or eliminate the release of TIH products from intentionally assaulted rail tank cars and stationary storage tanks. The project will investigate the damage caused by 0.50 caliber armor-piercing rounds and small IEDs. In FY 2009, the project focused on rail tank cars carrying chlorine. In FY 2010, the project will address stationary storage tanks, additional TIH chemicals, and additional threat scenarios. In FY 2011, the project plans to develop and demonstrate technologies that provide protection, detection, and/or mitigation for rail transport of stationary storage of toxic materials.

*Recovery Transformer Project* – Collaborates with IP and DOE to specify, design, build, and demonstrate a new type of electrical power transformer for use during recovery from emergency grid blackouts. The recovery transformer will be easy to transport and install, and have low maintenance requirements and a long service life. This capability will eliminate the two-year lag in transformer replacement and will increase the resiliency of the power grid. In FY 2009, the project focused on the systems engineering and requirements analysis and completed the draft design of a prototype transformer. In FY 2010, the project will complete the final design for the prototype recovery transformer and begin manufacturing. In FY 2011, the project plans to demonstrate the recovery transformer in laboratory environment.

**Geophysical Thrust Area** – FY 2010: \$20.645 million; FY 2011 estimate: \$0.000 million. Develops technologies and systems to address the geophysical phenomena that affect the Nation, i.e., hurricanes, flooding, earthquakes. The thrust area includes the Southeast Regional Research Initiative (SERRI) program, which assists State, local, and tribal leaders within the Southeast Region in developing tools and methods required to anticipate and forestall terrorist events and to enhance disaster response. SERRI project areas for FY 2010 will address identified DHS/FEMA requirements and capability gaps. Funding ends in FY 2010.

**Preparedness and Response (P&R) Thrust Area** – Develops and deploys capabilities that improve the Nation’s ability to prepare for, respond to, and recover from all-hazards emergencies. P&R applies science and technology to the safety and security of our

emergency responders and homeland security professionals so they can perform their jobs – saving lives, minimizing damage, and restoring critical services. All programs will comply with the National Incident Management System (NIMS), the National Response Framework (NRF), – previously known as the National Response Plan – and all HSPDs that enable government, private sector, and nongovernmental organizations to work together during domestic incidents of all sizes.

***First Responder Technologies Program*** – FY 2010: \$5.916 million; FY 2011 estimate: \$5.049 million. Develops advanced life-saving technologies to track, locate, monitor, and protect first responders, emergency managers, and incident commanders as they respond to all-hazard incidents. The S&T Directorate will test and evaluate the mission-critical technologies developed by this program before they become part of any acquisition programs. The following projects support this program.

*Geospatial Location Accountability and Navigation System for Emergency Responders (GLANSER) Project* – Develops an advanced first responder locating system that includes integrated sensor components and software for visualizing locations and tracks for incident commanders. The technology uses building diagrams, floor maps, and office/apartment location, and securely connects to emergency operations centers (EOCs). This system will enable incident commanders and decisions makers to visually track responders to enhance overall situational awareness. The project plans to develop a system that will improve accuracy and signal penetration through massive structures (i.e., underground, over ground): conduct testing in major urban areas; and demonstrate key 3D-locator prototype sub-components to track first responders within an accuracy of less than three meters. In FY 2009, the project built upon the proof-of-concept system tests and awarded two contracts to solve the remaining technology requirements (signal penetration through difficult structures, improved accuracy to one meter above and below ground), mature the system, and transition it into an operational product. In FY 2010, the project will develop the system prototype and deliver an initial set of locators for field-testing at several locations across the Nation. In FY 2011, the project plans to demonstrate a 3D locator sensor with an accuracy of one meter and develop a detailed visualization component.

*Physiological Health Assessment Sensor for Emergency Responders (PHASER) Project* – Develops an integrated sensor package that will monitor a responder's vital signs such as cardiac rhythm, heart rate, blood pressure, body temperature, and oxygen saturation, which could indicate Pre-Ventricular Contractions (PVCs) or cardiac arrhythmias. First responders need a highly reliable metric and notification system for on-scene identification of firefighters who are about to experience a heart attack or other life-threatening condition. This project plans to fuse these measurements to establish the physical health of the responder and warn both the wearer and command staff of life-threatening physiological conditions. In FY 2009, the project established system requirements through interaction with FEMA's U.S. Fire Administration (USFA) and other end-users across the Nation and issued a BAA to solicit proposals for the development of a PHASER system. The project also demonstrated a concept prototype to validate system requirements, architecture, and concept of operations (CONOPS). In

FY 2010, the project will develop two models (engineering and brass board) to conduct system tests at several test facilities to verify design and performance. In FY 2011, the project plans to adjust its focus and aggressively conduct further basic research to develop a better understanding of the science that would underlie a successful physiological monitor.

***Geospatial Analysis Program*** – FY 2010: \$0.000 million; FY 2011 estimate: \$0.384 million. Develops the tools to predict seismic activity using data acquired from satellites, as well as unmanned and manned aerial sensor platforms. For example, a new technique called radar interferometry (InSAR) has the potential to produce detailed maps of the warping of the Earth's surface during the earthquake cycle. The data obtained has a spatial resolution of a few tens of meters and at a precision of a few millimeters.

*Seismic Activity Detection Data Collection and Analysis Project* – Develops the data sources to support design and development of models that provide earlier prediction of seismic activity than is currently available from ground-based seismic monitoring systems. In 2011, the project plans to collect and evaluate requests for information for a Geospatial Analysis program to explore the use of overhead sensor data to provide early warning of seismic activity.

*Seismic Alert and Warning Project* – Integrates the modeling predictive capabilities with emergency management alert and warning systems, planning capabilities, and training and exercise programs. In 2011, the project plans to lay the groundwork to develop seismic warning models that integrate overhead sensor data into emergency management planning tools to provide better predictions of earthquake consequences.

***Incident Management Enterprise Program*** – FY 2010: \$5.924 million; FY 2011 estimate: \$6.233 million. Develops advanced, scalable, interoperable, and non-proprietary incident information-management, decision-making, and training tools for emergency responders and incident commanders to use in a variety of contexts, including everyday episodes and events of national significance that increasingly demand highly coordinated responses. Managing incidents comprehensively and transparently across the government and with various agencies is paramount to first responders' ability to prepare, protect, and respond to all-hazard incidents. The program includes developing critical logistics and resource tracking systems for restoring services, replenishing critical infrastructure, and helping disaster victims in a timely fashion. The logistics systems will provide total asset visibility to incident responders and commanders and will help manage the entire logistics supply chain – from inventory management to distribution and verification of supply disbursements. The following projects support this program.

*Advanced Incident Management Enterprise System (AIMES) Project* – Develops the next-generation incident-management enterprise system. It builds upon the UICDS architecture and TELL framework by providing an integrated, interoperable, and unified common operating picture with total visibility into incident information; resources; environment; logistics supply chain; response and recovery plans; methods; tactics; and policies. AIMES will integrate all elements of the incident management enterprise in

order to provide a secure, scalable, interoperable, and unified situational awareness to the responder community. In FY 2009, the project sponsored a series of workshops with FEMA and end-users in the emergency response communities to establish overall system requirements for AIMES. The project also completed an execution plan and developed a system concept prototype to establish a high-level architecture for AIMES demonstrating its functionality, as well as validating and prioritizing requirements. In FY 2010, the project will design, develop, and test an AIMES prototype enterprise framework. In FY 2011, the project plans to integrate logistics functions and modeling tools into AIMES.

*Incident Logistics and Resource Tracking System Project* – Provides a comprehensive and transparent disaster logistics enterprise across all disaster response, including public and private partners. Past incidents, such as Hurricane Katrina, highlighted the need for an integrated logistics capability to provide relief supplies to victims in a timely manner. This capability will provide decision makers overall situational awareness for timely procurement and disbursement of public and private material inventories, locations of resources, and supplies to respond to an emergency. The tracking system will allow FEMA to manage critical resources more effectively and will enhance real-time coordination and situational awareness. This capability will be scalable and interoperable with Federal, State, and local systems (legacy and future) to enable efficient use of the supply chain. In FY 2009, the project developed a prioritized list of FEMA logistics system requirements, established a program execution plan, and developed a functional logistics system prototype. In FY 2010, the project will develop the logistics system and begin integration into FEMA's Total Asset Visibility (TAV) capability. In FY 2011, the project plans to complete user testing of the first prototype system.

*Overhead Imagery Data Project* – Develops advanced GIScience to support the application of remote sensing, image processing, geographic information systems, digital cartograph, and spatial modeling for disaster management and hazards research. In 2011, the project will collect and evaluate requests for information to integrate overhead imagery data from a variety of collection platforms and sensors into incident management geospatial systems to improve and accelerate disaster impact analysis on facilities, dwellings, and critical infrastructure.

*P&R Advanced Requirements Development and Studies Project* – Engages emergency response communities at the Federal, State, and local levels to assess the state-of-the-art and establish requirements for the development of advanced technologies within the Incident Management Enterprise Program. This project teams customers with experts to develop those requirements. In addition, experts work with customers to identify any existing innovative capabilities that will meet the customers' needs. These investments at the early stages of technology acquisition improve chances of project success and increase project efficiency. In FY 2009, the project pioneered the application of an interactive virtual environment to integrate disaster information management systems. The project also demonstrated the technology to parts of FEMA and the All Hazards Consortium to inform the CONOPS. In 2010, the project will pilot the use of very high-resolution geospatial data in conjunction with a number of physics-based hazards models to provide emergency managers and incident commanders realistic 3-D virtual

environments that support consequence assessments, training, planning, and after-action reviews. Funding ends in FY 2010.

*Training, Exercise & Lessons Learned (TELL) Project* – Develops a federated simulation-based training and exercise capability that uses advanced computer models and will allow responders at all levels to affordably train and exercise for large and complex events in a virtual/constructive/live environment. TELL addresses the overarching need of successful implementation of the NIMS and the ability to conduct quick, repeatable, economical, and effective means of training incident commanders so they can better prepare to handle complex incidents. In FY 2009, the project conducted several joint training exercises, using the TELL prototype, across the United States with various first responder communities. The prototype incorporated lessons learned, enhancing the functionality of the system prior to deployment. In FY 2009, the project deployed the TELL architecture at the Seattle and Anaheim regional technology integration (RTI) cities. The project also identified sub-components to migrate to the Simulations Based Incident Planning and Response project. In FY 2010, the project will transition a federated simulation-based training, exercise capability to FEMA, and integrate technology concepts into IMMS/SUMMIT. Funding ends in FY 2010.

*Unified Incident Command and Decision Support (UICDS) Project* – Develops the UICDS framework based on the NIMS/Incident Command System (ICS) and NRF. It also develops compliant tools to manage and share information that will enhance incident command systems and multi-agency coordination with common situational awareness and decision support during all types of incidents. UICDS will allow multiple responding organizations (using their own equipment) to jointly manage personnel, direct equipment, and seamlessly communicate, gather, store, redistribute, and secure any mission-critical information needed by incident commanders and emergency responders during an emergency situation. In FY 2009, the project completed an advanced concept technology demonstration of the UICDS architecture, published the UICDS standards-based architecture, and integrated this into the DHS Grant Guidance process through the Department's Office of Grants and Training. Using this standards-based architecture will enable incident decision-makers to manage a unified response and share situational awareness with organizations providing support and coordination. In FY 2010, the project will merge into the Advanced Incident Management Enterprise System. Funding ends in FY 2010.

*Wild Fire Detection and Prediction Project* – Develops the tools to detect, locate, and then predict the magnitude of wild fires to help prevent wildland-urban interface (WUI) fire disasters. In 2011, the project plans to define concept and requirements for improved techniques for the early detection of wild fires in remote locations and the prediction of magnitude and direction of wild fire, if left alone.

*Integrated Modeling, Mapping, and Simulation Program* – FY 2010: \$2.093 million; FY 2011 estimate: \$3.000 million. Develops and integrates advanced modeling and simulation technologies to support the incident management teams of first responders, commanders, and decision makers to better understand, prepare, and plan for emergency

operations to enhance the quality of response and recovery operations. Specifically, this program plans to conduct R&D in the following three technology areas: advanced models of critical infrastructure; standard integration process and methodology to enable plug and play of legacy and new models; and support for a real-time modeling framework. This program will integrate these technologies in an advanced simulation infrastructure so that first responders can conduct simulation-based planning exercises to economically verify and validate their response plans.

*Standard Unified Modeling Mapping Integrated Toolkit (SUMMIT) Project* – Provides FEMA analysts, decision makers, policy makers, emergency managers, and infrastructure operators an integrated modeling and simulation capability. This capability effectively, economically, and rapidly verifies and validates response tactics, plans and procedures, and conducts “what-if” incident analyses prior to (preparedness, analysis, training), during and after an incident (operational, lessons learned) scenarios. The project will develop accurate and reliable estimates of hazards from a wide range of natural and terrorist events; analyze and use route mapping to effectively manage transportation assets during mass evacuations or the post-event flow of emergency supplies; and conduct analyses to provide better understanding of possible impacts from natural disasters and terrorist events. This project will leverage results of the TELL project and will follow three tracks: model development, integration framework, and support for conducting planning exercises. The project will use a spiral-development process to insert technology as it matures and to refine requirements and concepts before committing to significant development efforts. In FY 2009, the project conducted workshops with stakeholders from FEMA and the modeling and simulation communities across DHS and other government agencies, universities, and the private sector to identify, capture, and prioritize the simulation model requirements and capabilities. In FY 2009, the program also conducted disaster-planning training scenarios to prepare FEMA decision and policy makers to validate their plans, procedures, tactics, and doctrine. In FY 2010, the project will develop framework specifications for new models. In FY 2011, the project plans to integrate and test modeling technologies for the simulation based-incident planning and response system.

*Regional Technology Integration (RTI) Program* – FY 2010: \$1.880 million; FY 2011 estimate: \$0.000 million. Facilitates the transition of innovative technologies and organizational concepts to national, regional, State, and local jurisdictions. Cincinnati and Ohio will continue to serve as pilot locations, providing an opportunity for fine-tuning new hardware and processes under real-life conditions and validate technology maturity for transition to other jurisdictions, both large and small. In FY 2010, the program will use lessons learned in Cincinnati to prepare to transition technologies into other urban areas across the country to provide an immediate enhancement in the levels of preparedness and response. The program will complete development of the Resource Typing System and deploy it in Cincinnati, transition a Resource Typing Standard package to the National Preparedness Division within FEMA, and deploy a Virtual Exercise Capability. Funding for this program ends in FY 2010.

Total Change 2010 to 2011	-	-	-

The Science and Technology (S&T) Directorate requests \$44.000 million for Innovation activities. Innovation will conduct major demonstrations, and the decrease scales back two new projects in explosives and passive screening detection. Unlike transition research programs that pursue incremental improvement, Innovation projects are high-risk in nature, but if successful, they dramatically increase DHS capabilities in addressing homeland security threats.

**CURRENT SERVICES PROGRAM DESCRIPTION**

The Office of the Director of Innovation oversees the S&T Directorate's Homeland Security Advanced Research Projects Agency (HSARPA). Established by the *Homeland Security Act of 2002*, HSARPA funds Research and Development (R&D) of homeland security technologies to

“...support basic and applied homeland security research to promote revolutionary changes in technologies that would promote homeland security; advance the development, testing and evaluation, and deployment of critical homeland security technologies; and accelerate the prototyping and deployment of technologies that would address homeland security vulnerabilities.”

The Director of Innovation/HSARPA works closely with the Under Secretary for Science and Technology, the S&T Directorate's divisions, DHS components, industry, academia, and other government agencies to determine topic areas for projects. The Director's many sources of guidance and recommendations include:

- Congressional direction;
- DHS Goals and Priorities as described by the Secretary of Homeland Security;
- Office of Management and Budget (OMB) and Office of Science and Technology Policy (OSTP) Research and Development Budget Priority Guidance;
- Goals set by the Under Secretary for Science and Technology;
- DHS components' input regarding their operational capability gaps; and
- The S&T Directorate's Integrated Product Team (IPT) process.

Innovation focuses on high-risk/high-reward, homeland security R&D that could lead to technology breakthroughs and products that significantly enhance DHS operations. Its efforts are complementary to the S&T Directorate's other programs and projects, pushing scientific limits to address gaps in areas where current technologies and R&D are inadequate or non-existent.

Innovation requires flexibility to adapt its projects that may end abruptly. When projects fail or stop at critical decision points, Innovation may initiate new projects during the execution year or increase funding for existing projects that show promise. Innovation always has projects in reserve that take into consideration the impact of emerging technologies and new opportunities to leverage other Federal programs and activities. Innovation performs program reviews, Under Secretary-level reviews, and other evaluations to determine whether projects should begin, end, transition to another division, or transition products to a customer.

***Biometric Detector Project*** – FY 2010: \$2.000 million; FY 2011 estimate: \$1.500 million. Develops rapid, non-contact, three-dimensional fingerprint scanner technologies that will allow DHS to collect high-quality fingerprints at screening checkpoints with minimum impact on throughput. Currently, the fingerprinting process is slow, and converting contact fingerprints into digitally stored records is time consuming and can require several attempts. Biometric Detector will develop less intrusive technology that produces much higher success rates at capturing fingerprints the first time, with greater detail, consequently increasing speed and accuracy in records matching and identification.

In FY 2009, the project demonstrated prototypes for a single fingerprint scanner and down-selected two for further development. In FY 2010, the project will demonstrate two multi-finger scanners; evaluate fingerprint spoofing; and assess the ability of human fingerprint examiners and computer algorithms to match the new three-dimensional fingerprint data to two-dimensional fingerprint data in existing databases. In FY 2011, the project has two alternatives based on the contactless, multi-finger demonstration results and customers' input. The first alternative is to develop a non-contact scanner for the entire hand, and demonstrate the biometric detector prototypes in the field. The second alternative is to refine the multi-finger prototype into a system ready for transition to DHS customers.

***Cell-All Ubiquitous Chem Detect Project*** – FY 2010: \$2.500 million; FY 2011 estimate: \$3.000 million. Examines proof-of-concept technologies for integrating miniaturized chemical agent detectors into personal devices, such as cellular telephones. Together, individual miniaturized sensing devices can create a widely distributed network for detection, classification, and notification of a chemical release, potentially detecting chemical components of some biological agents. Individual device owners on the network will control the detection and transmission of the data, sensor timing, and global positioning system location information. The goals of this project include significant improvement to chemical and biological detectors' integration, size, cost, power, maintenance, durability, and response characteristics.

In FY 2009, the project developed three first-generation chemical sensing laboratory prototypes. One technology leverages the National Aeronautics and Space Administration's (NASA) nanotechnology expertise to create novel, gas-sensor architectures. NASA's base technology supports environmental sensing in manned space flight and the International Space Station. The second prototype uses porous silicon artificial-detection devices integrated into a common cell phone component. A third effort established a performance baseline for current commercial environmental sensing technologies. Each prototype collected environmental data to establish sensor functionality. In FY 2010, the project will compare and demonstrate prototypes for a multi-phone environment in the laboratory and in the field. If the demonstration results justify further development, the project will then focus on miniaturizing these emerging sensor designs and develop an overall concept of operations (CONOPS) for the new capability. This phase of the program will lay the groundwork for more widely available and adaptable environmental sensing technology for future sensor designs. In FY 2011, the project plans to test the prototypes on an actual telecommunication service provider's network to examine network effects and implement a pilot CONOPS.

***Future Attribute Screening Technologies Mobile Module (FASTM2) Project*** – FY 2010: \$10.000 million; FY 2011 estimate: \$7.000 million. Develops a prototype screening facility containing a suite of real-time, non-invasive sensor technologies to detect behavior indicative of malintent (the intent or desire to cause harm) rapidly, reliably, and remotely. The system will measure both physiological and behavioral signals to make probabilistic assessments of malintent based on sensor outputs and advanced fusion algorithms. Federal, State, and local authorities may use the fully developed FAST system in primary and secondary screening environments to increase the accuracy and validity of people screening at special events, airports, and other secure areas. FAST will measure indicators using culturally independent and non-invasive sensors. FAST will use an ongoing, independent peer review to ensure objectivity and thoroughness in addressing all aspects of the program.

In FY 2009, the project validated and updated the malintent theory. The project also updated the sensors and module environment and incorporated initial elements of data fusion and machine learning to improve screening accuracy through multi-modal sensor architectures (e.g., heart beat, respiration, pore count, etc.). Additionally, the project evaluated the capability to adjust the screening processes automatically to adapt to a

change in threat levels and other changes in the environment (e.g., general tension among passengers when airlines experience major delays). In 2009, the project used human subjects in an approved protocol to demonstrate real-time intent detection at a simulated speaking event.

In FY 2010, the project will identify, integrate, and demonstrate continued advances in physiological and behavioral screening and new sensor technology. The project will optimize performance (e.g., decrease face-to-face time required between a guard and a passenger), upgrade software so it is adaptable to different customers' environments, and demonstrate the effectiveness of the mobile module in laboratory and operational environments (e.g., border crossing, transportation portal). In FY 2011, the project plans to refine the system further to ensure cultural neutrality and evaluate transition options.

***Hurricane & Storm Surge Mitigation Project*** – FY 2010: \$0.000 million; FY 2011 estimate: \$0.000 million. Cancelled to fund higher priority work on Wide Area Surveillance. The S&T Directorate determined that a demonstration would not be feasible in the next two to five years. The project's goal was to develop methods to better understand and accurately predict the behavior of hurricanes to reduce the intensity and/or duration of a hurricane or storm. The goal was not to stop hurricanes, which are a crucial part of nature's cycle, but to mitigate damage to life and property. The project attempted to understand the dynamics of storms as they grow from small, tropical depressions into full hurricanes and identify ways to manipulate variables to reduce the intensity and/or duration of a hurricane or storm before it reaches a point of runaway growth. Possible approaches included aerosol seeding, carbon black aerosol, and upper-ocean cooling. State and local officials would have been able to determine more accurately and quickly which areas to evacuate.

In FY 2009, the project began modeling hurricane life cycles. The project also funded equipment used on National Oceanic Atmospheric Administration (NOAA) aircraft for collecting data in parts of the hurricane that are not yet well understood, such as the eye wall and the transitional layer (400-500 feet above the surface of the water), and that have previously presented challenges in data collection.

***Levee Strengthening & Damage Mitigation Project*** – FY 2010: \$5.000 million; FY 2011 estimate: \$0.500 million. Develops techniques to rapidly seal a breached levee. In September 2008, the project successfully demonstrated the Portable Lightweight Ubiquitous Gasket (PLUG) at a United States Department of Agriculture (USDA) facility in Stillwater, Oklahoma. The PLUG, at quarter scale, greatly impeded the water with a flow rate of nearly 120 cubic feet per second. This demonstration also included a 1) Long Shallow Breach PLUG specifically designed for levees similar to the ones that failed in New Orleans during Hurricane Katrina and 2) Rapid Spillway/Earthen Dam Protection technology that protects earthen sections by minimizing erosion during high water flows. The project's subsequent activities build on these successes.

In FY 2009, the project began developing a CONOPS and a full-scale PLUG. The project also refined the Long Shallow Breach PLUG and Earthen Dam Protection

technologies and designed a PLUG to seal off large sections of flooded areas to allow permanent repairs without having to build a temporary dam to hold back water. In FY 2010, the project will complete a full-scale PLUG and establish a site that can demonstrate its capabilities. This site, expected to allow a water flow rate of up to 1500 cubic feet per second and breaches of up to 40 feet, will support future testing of subsequent PLUG sizes and designs and train operators to deploy them, particularly in severe conditions. The site will also support continued research and technology development to address levees. In FY 2011, the project plans to evaluate transition options for the PLUG after a thorough readiness review.

***Tunnel Detect Project*** – FY 2010: \$0.000 million; FY 2011 estimate: \$0.000 million. Develops detection technologies to locate clandestine underground tunnels used for cross-border illegal activities such as smuggling. Current tunnel detection technologies are almost non-existent, and the few available require experts to operate, significant time to process data, and do not work in all geographical environments. Recognizing there is no single solution, the S&T Directorate is using a multi-modal approach to tunnel detection, relying on several different indicators to detect tunnels.

In FY 2009, the project conducted a demonstration of an Airborne Electromagnetic Gradiometer with Customs and Border Protection (CBP) and Immigration and Customs Enforcement (ICE). The project also conducted a full-scale demonstration of the advanced Ground Penetrating Radar (GPR), a second approach for tunnel detection. This project ends in FY 2009. In FY 2010, the Multi-modal Tunnel Detection project may use GPR as one of the sensors in an integrated tunnel detection system.

***Multi-modal Tunnel Detect Project*** – FY 2010: \$3.500 million; FY 2011 estimate: \$3.000 million. Builds on the original tunnel detection project to develop an integrated, orthogonal approach to detect and characterize cross-border tunnels. No single technology can effectively detect tunnels. Multi-modal Tunnel Detect will combine various sensor modalities (i.e. magnetic, seismic, acoustic, resistive, radio frequency, and other complementary sensor modalities) to develop new border security system technologies for reliable detection of clandestine tunnels for a variety of border environments. This project, a new start in FY 2010, will 1) improve the identification and characterization of geophysical conditions found in areas of greatest interest along the border; 2) uncover technological dependencies with respect to location; and 3) develop prototypes to detect clandestine tunnels.

In FY 2010, the project will model the geological and geophysical characteristics of border areas of greatest interest. The project will survey potential tunnel detection solutions; participate in a joint project with the Department of Defense (DOD) to evaluate the initial three approaches (i.e., passive seismic/acoustic, active seismic, and electromagnetic). The project will also modify the GPR Prototype as a sensor in multi-modal technology and evaluate in-ground commercial fiber optic infrastructure as a potential acoustic sensor. The project will also research using various methods to indirectly indicate the presence of a tunnel via tracking illicit transport methods. In FY

2011, the project plans to develop a suite of integrated sensors and demonstrate prototypes based on its FY 2010 findings.

The S&T Directorate will continue to work with Customs and Border Protection (CBP) and Immigration and Customs Enforcement (ICE). It will continue to rely on the geological expertise of the following: the United States Geological Survey, U.S. Army Corp of Engineers – Engineering Research and Development Center, National Geospatial Agency, Defense Threat Reduction Agency, Defense Advanced Research Projects Agency, Defense Intelligence Agency – Underground Facilities Analysis Center, Sandia National Laboratory, and Los Alamos National Laboratory.

***Rapid Liquid Component Detector (MagViz) Project*** – FY 2010: \$4.000 million; FY 2011 estimate: \$4.000 million. Uses ultra-low field Magnetic Resonance Imaging (MRI) technology to screen baggage for liquid explosives. The goal of MagViz is to improve security and enable the Transportation Security Administration (TSA) to eliminate the 3-1-1 rule. Current airport screening procedures require passengers to put liquids or gels (e.g., certain toiletries and medicines) in containers that are 3.4 ounces or smaller, and pack the containers into one quart-sized, clear plastic, zip-top bag. These “3-1-1 bags” undergo an X-ray inspection and possibly secondary screening using other methods such as visual inspection or trace detection. However, current checkpoint X-ray systems cannot reliably differentiate between threat and benign liquids. MagViz intends to detect liquids in baggage without contact at the same rate as current X-ray machines with minimal impact on passenger throughput.

In FY 2009, the project built a database of liquids through magnetic characterization; developed the theory of ultra-low field MRI to better understand the factors that affect MagViz’s performance; assessed the system’s ability to perform and overcome “clutter” in an operational environment; and demonstrated the capability of the research prototype to inspect to a depth of 10 cm. *R&D Magazine* selected MagViz as a winner of the “47<sup>th</sup> Annual 2009 R&D 100 Award” recognizing MagViz as one of the most innovative ideas of the year. In FY 2010, the project will continue building the magnetic characterization database of liquids; evaluate the capability of MagViz to detect dangerous semi-solids (e.g., heavy gels, creams) and solids; and demonstrate MagViz’s capability to seamlessly screen segregated liquids (without the 3-1-1 bag constraint) at a depth of 22 cm in a laboratory. The project will also develop and test a Bottled Liquid Scanner (BLS) that uses the MagViz technology. In FY 2011, the project plans to evaluate transition options with TSA, commercialize ultra-low field MRI technology, and extend MagViz’s capabilities to detect liquids inside baggage.

***Resilient Electric Grid (REG) Project*** – FY 2010: \$4.500 million; FY 2011 estimate: \$4.000 million. Demonstrates High-Temperature Superconducting (HTS) technologies for reliable distribution and protection of electrical power. REG will protect critical, electric-power dependent infrastructure (like the Manhattan Financial District) from the cascading effects of a power surge on electrical grids. The existing electric grid is highly susceptible to brown outs and black outs, and current methods for preventing power outages and restoring power often require extraordinary effort and are costly and slow.

Existing technologies and planned mitigations also require a lot of space, which is problematic in dense urban areas. This project will demonstrate key components of a future “micro grid” that will instantaneously reduce power surges and allow for multiple alternative pathways of power delivery, providing resilience against natural disasters and deliberate attacks. Across the country, a resilient electric grid will produce billions of dollars in savings each year in the course of normal operations through gains in efficiencies.

In FY 2009, the project successfully demonstrated the key fault-current limiting capability of a 25-meter HTS cable at Oak Ridge National Laboratory. In FY 2010, the project will conduct additional testing on a 25-meter cable to address heat (alternating current) losses; improve the insulation properties to protect the cable against lightning strikes; and define system requirements for the refrigeration system. The project will also demonstrate a stand-alone fault current limiter (FCL), which is an alternative to the relatively high-risk, inherently fault-current-limiting (IFCL) HTS cable.

The REG project had planned to install the IFCL-HTS cable in the Manhattan, NY grid in FY 2010 and continue testing the cable into FY 2011. However, Consolidated Edison has delayed construction of the targeted substation due to the economic downturn. This delay has allowed Innovation to fund higher priority work in FY 2010 on existing projects, including Levee Strengthening and Damage Mitigation, MagViz, and Multi-modal Tunnel Detect.

The REG project is currently evaluating alternative in-grid test sites to continue its work in FY 2011. The project is also considering extending its research to leverage the Department of Energy’s (DOE) investment in smart grids. This aspect of REG would research security and self-healing aspects and components of the smart grid. Additional research in areas such as microgrids, fault sensing, and advanced materials for solid-state devices can provide added resiliency and security for the grid. In FY 2011, through coordination with DOE, the project plans to develop and demonstrate key security-related components of the smart grid in FY 2011.

***Resilient Tunnel Project*** – FY 2010: \$2.000 million; FY 2011 estimate: \$2.000 million. Develops technologies to address critical vulnerabilities in U.S. transportation tunnels. The project is designing an inflatable tunnel plug to protect mass transit tunnels from fires, smoke, and flooding. Past assessments revealed that terrorists using improvised explosive devices (IEDs) could exploit certain weaknesses to cause catastrophic tunnel failure. The project expands upon the analyses to identify alternative technical solutions to mitigate these vulnerabilities. Washington Metropolitan Area Transit Authority and the Port Authority of New York and New Jersey’s operating requirements drive technical and operational requirements for the plug and subsystem designs.

In FY 2009, the project conducted numerical modeling to optimize plug structure and performance; applied stronger materials to construct new small-scale plugs; and subjected these plugs to pressurized testing in the laboratory to simulate tunnel flooding. Also in FY 2009, the project began design and tests of component subsystems (e.g., inflation

mechanism, packaging, control, and sensing) for a complete Resilient Tunnel system. In FY 2010, the project will conduct a full-scale demonstration of a more advanced, second-generation tunnel plug. The project will re-evaluate the plug design, optimize plug geometry, and generate a final design to develop a plug that can withstand higher pressure. In FY 2011, the project plans to develop and test a small-scale high-pressure plug in the laboratory leading to full-scale development and demonstration in FY 2012.

***Safe Container (SAFECON)/Time Recorded Ubiquitous Sensor Technology (TRUST) Project*** – FY 2010: \$5.000 million; FY 2011 estimate: \$8.000 million. Develops high reliability, high-throughput detection technologies to scan containers entering the country for weapons of mass destruction, explosives, contraband, and human cargo. The project attempts to immediately detect and isolate suspected threat containers while minimizing impact on commerce. SAFECON is a crane-mounted sensor system that detects dangerous cargo in shipping containers during on- and off-loading. SAFECON also looks for sensors and specialized container materials designed to make screening more effective. TRUST is an alternative approach to container screening that takes advantage of the long transit time most shipping containers undergo from their port of origin to the United States. TRUST will sample for chemical, biological, radiological, nuclear, and high yield explosive (CBRNE) threats and human cargo inside the container, without opening the container. SAFECON and TRUST's parallel development will allow each to take advantage of findings from the other.

SAFECON – In FY 2009, the project demonstrated chemical and explosives sensor performance in a laboratory. In FY 2010, the project will construct a test bed at the Transportation Security Laboratory (TSL) to test vendors' proposed technology solutions. This test bed will provide a realistic environment, allowing system tests against CBRNE threats. In addition, the project will conduct a final demonstration of the Remote Vapor Inspection System (RVIS) at the test bed and develop sample collectors for subsequent technologies. In FY 2011, the project plans to demonstrate the sample collectors' capabilities to determine if the project must develop new sensors or can modify existing ones.

In FY 2010, the project will develop a prototype of the TRUST system. In FY 2011, the project plans to test the prototype at sea and evaluate results. Also in FY 2011, the project plans to continue research and development on sensors and sample collectors for TRUST.

***Very Low Cost Bio Agent Detect Project*** – FY 2010: \$2.000 million; FY 2011 estimate: \$4.500 million. Decreases cost and improves performance of near real-time pathogen detection and characterization by eliminating the "consumables" (e.g., buffer, reagents, etc.). The project will conduct comparative experiments between competing approaches; and conduct field pilots within the homeland security community to validate cost and efficiency models.

Currently, all biological detection methods require fluids, and much of the expense comes from the direct costs and care of reagents required in the process. This project, a new

start in FY 2010, will pursue “dry methods” that do not use water or that can take moisture from the air. Further advantages could result from decreasing the size and power consumption of such detectors to support ubiquitous detection with low operation and maintenance costs. In FY 2010, the project will conduct feasibility studies of different approaches in the laboratory. In FY 2011, the project plans to test various methods in the laboratory and down-select approaches for prototype development.

**Wide Area Surveillance Project** – FY 2010: \$3.500 million; FY 2011 estimate: \$3.500 million. Investigates novel sensors and systems for use in densely populated infrastructure settings and urban landscapes (e.g., airports, train stations, city streets and squares) to provide continuous surveillance of the Nation’s highest priority infrastructure. The effort will adapt and further develop military-grade optical sensors with far greater image resolution than currently available commercially. This project will integrate sensors into a system that must accommodate large data quantities, camera-to-camera handoff, and advanced image recognition. It will provide high-resolution real-time and forensic surveillance of threats posed by individuals, objects, or vehicles.

In FY 2009, the project evaluated the first-generation prototype in a laboratory. The project will demonstrate this prototype at Logan International Airport in Boston, MA in FY 2010. Also in FY 2009, the project began development of a novel optical imager that leverages military aerial surveillance technology to advance the system hardware. The new imager will more than double the previous resolution and may ultimately improve system cost effectiveness due to its use of a large number of inexpensive imagers. In FY 2010, the project will demonstrate this more advanced, second-generation system in the laboratory. The project will also improve tracking of people and vehicles throughout a complex scene by integrating advances in both system hardware and algorithms. In FY 2011, the project plans to demonstrate the integrated system at Logan International Airport.

In addition, cancellation of the Hurricane and Storm Surge Mitigation project has accelerated work in this area. In FY 2010, the project will incorporate infrared features into the system. In FY 2011, the project plans to demonstrate a prototype of the infrared, persistent surveillance system in a laboratory.

**New Starts** - The projects in this section T & are a sample of over thirty projects that the S cycle-of-New starts may also begin out .Directorate has evaluated as potential new starts .sas existing projects stop at critical decision point

Innovation provides only high-level details for new starts because it addresses known problems with emerging solutions. Specific information is not available until private e to Broadand others propose solutions in respons ,laboratories ,universities ,entities .Agency Announcements

**Operationally Deployable Explosives Mitigation Project**– FY 2011 estimate: \$1.500 million. Develops new approaches and technologies to mitigate the shrapnel damage The .or suicide bombers/ve andfrom an explosi (and ball bearings ,tacks ,nails ,.g.e)

novel concept is to mitigate the effects of explosives by forcing the shrapnel into the ground to minimize damage to surrounding people and infrastructure

***Passive Methods for Precision Behavioral Screening Project***– FY 2011 estimate: \$1.500 million. Builds on the FAST program to transform the screening process from active to passive detection so that screening process does not require direct interaction technologies that willThis project will develop techn .between the operator and the subject undetectable ,intrusive-and throughput using non ,automation ,enable increased standoff s intent to'technologies that screen for behavioral and psychological cues of a person n will enable thePassive detectio .commit a harmful act at safe standoff ranges interpretation of physiological and behavioral cues or signatures that the body naturally and does not ;accurate validation of associated documentation/support rapid ;produces ,radio frequency energy ,sscan ,agents asking questions) induced stress-require operator .(.etc ,scans

***Tunnel Activity Monitoring Project (Currently Unfunded)*** – Integrates sensors and covert communication technologies to detect human activity in existing public infrastructure tunnels such as sewer systems. Development of “through-the-wall” sensors and communications systems that use low power but are robust enough to effectively work in a difficult, underground environment with concrete, wire mesh, re-bar, and other features is a significant challenge. The project will also assess technologies to extract and interpret sensor information from the tunnels. Tunnel Activity Monitoring is another approach to securing the borders and complements the Multi-modal Tunnel Detection project, which focuses on detecting the presence of a tunnel.

<b>2011 Current Services</b>	<b>130</b>	<b>130</b>	<b>110,854</b>
2011 Program Change	-	-	11,146
<b>2011 Total President's Budget</b>	<b>130</b>	<b>130</b>	<b>122,000</b>
Total Change 2010 to 2011	-	-	(28,188)

The Science and Technology (S&T) Directorate requests \$122.000 million for this activity in FY 2011. The program change of \$11.146 million and overall decrease of \$28.188 million reflect increases in infrastructure upgrades at the Transportation Security Laboratory (TSL) and laboratory operations. These changes also reflect the transfer of test and evaluation activities supporting the Transportation Security Agency (TSA) to the Explosives PPA and decreases for Pacific Northwest National Laboratory (PNNL) Capability Replacement Laboratory and the National Bio and Agro-defense Facility (NBAF).

**CURRENT SERVICES PROGRAM DESCRIPTION**

The Office of National Laboratories (ONL) manages the Laboratory Facilities programs. ONL provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland.

The *Homeland Security Act of 2002* assigns ONL “the coordination and utilization of the Department of Energy (DOE) national laboratories and other sites under Section 309 in a manner to create a networked laboratory system for the purpose of supporting the missions of the Homeland Security Department”. In addition to oversight of the S&T Directorate’s laboratory operations, ONL coordinates homeland security-related activities and laboratory-directed research conducted within the DOE’s national laboratories.

ONL's internal customers are the S&T Directorate's executing divisions and the Test and Evaluation and Standards division. The primary external Federal customers are the United States Department of Agriculture (USDA), Transportation Security Administration (TSA), and the Federal Bureau of Investigation (FBI). ONL executes three thrust areas: Laboratory Operations, Facilities Construction, and Salaries and Benefits.

**Facilities Construction Thrust Area** – Oversees the planning, budgeting, and management of laboratory infrastructure construction and upgrade projects. Construction projects provide and maintain research and development (R&D) capabilities to support the missions of the S&T Directorate, the Department, and other government agencies that have interrelated homeland security missions such as USDA, Department of Health and Human Services (HHS), and Department of Defense (DOD). The ONL construction investments include the construction of future laboratories, where a current capability does not exist, and upgrades to extend the life and capabilities of present laboratory facilities.

***Infrastructure Upgrades Project*** – FY 2010: \$5.000 million; FY 2011 estimate: \$20.000 million. Ensures that DHS S&T laboratories do not reach a point where dilapidated infrastructure or the lack of sufficient infrastructure prohibits conducting needed research and development. Capital upgrades are not routine operations and maintenance or expected upkeep but include remodeling, rebuilding, and outfitting space to allow scientists to pursue new capabilities based on customer requirements; and major overhauls of systems (electrical, water/sewage system) to ensure operability, safety, and security. This effort prevents an unmanageable and unaffordable situation where multiple key facilities require upgrades simultaneously.

Infrastructure upgrades will continue into FY 2011 for TSL, where many of the facilities are insufficient to support its changing mission. Infrastructure upgrades address space issues and allow TSL to extend its capabilities beyond aviation to mass transportation. In FY 2010, ONL will construct explosive storage bunkers so TSL can continue to support increasing system development testing requirements. The bunkers will eliminate the need to rent storage space off-site and position TSL for anticipated growth in detection systems validation.

In addition to explosives storage space, capital investment plans at TSL include the following: constructing a new independent testing and evaluation (IT&E) laboratory; renovating and expanding the developmental, test, and evaluation (DT&E) laboratory space; and providing additional office and non-explosive storage space. These upgrades support TSL's current needs and the laboratory's efforts to expand expertise in mass transportation. Currently, the laboratory operates second and third shifts and must rotate equipment among various laboratory cells to conduct testing. Any disruptions in these activities adversely affect testing schedules and technology development for DHS customers. In FY 2011, ONL plans to complete design for TSL upgrades, begin renovating space to increase DT&E space, and begin constructing general-purpose laboratory and administrative space to support the IT&E and DT&E missions.

***National Bio and Agro-Defense Facility (NBAF) Construction Project*** – FY 2010: \$32.000 million; FY 2011 estimate: \$0.000 million. Provides an integrated animal, foreign animal, and zoonotic disease research, development, and testing facility to support the complementary missions of DHS and USDA. NBAF will replace Plum Island Animal Disease Center (PIADC) and provide additional capabilities in state-of-the-art research, development, testing, and evaluation infrastructure, including biosafety level (BSL)-4 capabilities, to conduct research on high-consequence zoonotic (i.e., transmitted from animals to humans) diseases that could be a threat to public health. Increased capabilities allow NBAF to address a broader and more complete spectrum of threats. Research and development at NBAF will address multiple threats/vulnerabilities related to bio- and agro-attacks and improve our understanding of potential agro-terrorism such as employing foreign animal and zoonotic disease pathogens against U.S. targets.

***NBAF Facility Space Justification*** – NBAF will satisfy the requirements identified in Homeland Security Presidential Directives (HSPD) -9 and -10 by providing an integrated facility for studying foreign animal diseases and zoonotic diseases. The existing animal holding, laboratory, training, and support spaces at PIADC are severely limited and present challenges for scientists and building operators. Major limitations exist in the ability to conduct large-animal research trials necessary for assessing and countering emerging threats and developing necessary vaccines. PIADC operations currently cannot conduct certain research activities because the facility does not meet current standards and lacks sufficient space.

NBAF will have approximately 504,000 gross square feet. The overall space is broken out as follows:

<b>Space</b>	<b>GSF</b>
Office/Admin.	35,000
BSL-2*	30,000
BSL-3**	372,000
BSL-4	55,000
Vaccine Prod.	12,000
<b>NBAF</b>	<b>504,000</b>

\*BSL-2 includes laboratory and support areas.

\*\*BSL-3 includes laboratory, agriculture threat containment, and training and support areas.

Foot and Mouth Disease (FMD) research requires BSL-3 laboratory space while zoonotic disease research requires BSL-4 laboratory space. Upon completion, NBAF will include BSL-4, large animal and laboratory space for DHS and USDA research that PIADC lacks.

In FY 2009, the project completed the Environmental Impact Statements (EIS) that evaluated the six remaining candidate sites, including Plum Island, to comply with the National Environmental Policy Act. After an extensive three-year site selection process, the S&T Directorate issued a Record of Decision (ROD) selecting the Manhattan, Kansas site for NBAF. Also in FY 2009, ONL began a detailed design of the facility. In FY 2010, the S&T Directorate's appropriation will fund design and site-specific risk assessment studies. In addition, the cost-share funds from the State of Kansas will support site preparation including earthwork, roadways, parking, fencing, and utility distribution.

For FY 2011, the S&T Directorate will request a reprogramming of prior year funds. In FY 2011, the Directorate plans to build the central utility plant (CUP) with the reprogrammed funds in conjunction with matching funds from Kansas.

The FY 2010 Appropriations language (H.R. 2892, Section 535) directs that should the DHS Secretary determine that Plum Island will not be the future site of NBAF, the Secretary will have the General Services Administration (GSA) Administrator sell Plum Island's real and related personal property along with transportation assets supporting PIADC operations through public sale. Proceeds from the sale will be available in an offsetting account of the DHS S&T Directorate's Research, Development, Acquisition, and Operations (RDA&O) to offset site acquisition, NBAF construction, and related costs including due diligence requirements necessary to remediate Plum Island and reimbursement for expenses incurred by GSA. GSA is currently working with DHS to put Plum Island on the market and projects that proceeds from the sale of Plum Island will be available in FY 2012. As part of the sale, DHS plans to include a leaseback agreement so that PIADC can continue operations during NBAF construction and until research functions are transferred to the new NBAF facility.

***Pacific Northwest National Laboratory (PNNL), Area 300 Project*** – FY 2010: \$12.000 million; FY 2011 estimate: \$0.000 million. FY 2010 funding fulfills the S&T Directorate's total commitment to the Capability Replacement Laboratory of \$55.934 million, per the MOA between the S&T Directorate and DOE. The DOE Office of Science manages this project. ONL provides project management oversight and coordination for the construction of this DOE-led project. PNNL currently provides DHS with research and development capabilities in several areas, such as radiological detection and analysis, dosimetry for standards, and information analytics. This research supports the S&T Directorate, National Protection and Programs Directorate (NPPD), Domestic Nuclear Detection Office (DNDO) and Custom and Border Protection (CBP). In FY 2007, ONL supported the joint program's facility design. Construction began in FY 2008. ONL expects PNNL 300 construction completion in FY 2011.

**Laboratory Operations Thrust Area** – Manages the operations and maintenance of the DHS laboratories and infrastructure. ONL provides the planning, budgeting, and coordination for facilities, infrastructure, operations, and personnel to provide effective support to the S&T Directorate's programs. The DHS laboratories include Chemical Security Analysis Center (CSAC), National Urban Science and Technology Laboratory

formerly Environmental Measurements Laboratory (EML), National Biodefense Analysis and Countermeasures Center (NBACC), PIADC, and TSL.

***Chemical Security Analysis Center (CSAC) Project*** – FY 2010: \$0.510 million; FY 2011 estimate: \$0.520 million. Develops and informs risk assessments related to national chemical defense. CSAC is located at the DOD Edgewood Chemical Biological Center (ECBC) in Aberdeen, MD. CSAC directly supports the S&T Directorate's chemical countermeasures activities in the Chemical and Biological Division and operates in cooperation with the FBI and DOD.

The DOD Sample Receipt Facility (SRF) at ECBC houses CSAC, providing the capability to integrate knowledge across the full chemical threat spectrum. In FY 2009, CSAC commenced full operations. In FY 2009, FY 2010, and FY 2011, operations costs for this facility include rent, security, utilities, and information technology infrastructure.

***National Urban Security Technology Laboratory (NUSTL) formerly Environmental Measurements Laboratory (EML) Project*** – FY 2010: \$1.250 million; FY 2011 estimate: \$2.000 million. Provides testing and evaluation expertise to the S&T Directorate and other DHS components such as DNDO. NUSTL also is the DHS liaison for the deployment of experimental technologies in the New York City metropolitan area. NUSTL is a government-owned, government-operated laboratory located in the Borough of Manhattan in New York City.

In FY 2009, ONL conducted the remaining environmental cleanup to return excess space to GSA and move NUSTL to smaller facilities. The move will reduce rent and operational costs. The laboratory plans to transition into the new offices by the end of FY 2010. GSA requirements for final cleanup include, at a minimum, the final disposal of contaminated materials and removal of fume hoods, large exhaust ducting, furnaces, and other equipment that are legacy from DOE activities. The FY 2009, FY 2010, and FY 2011 operations costs include rent, security, and utilities.

***Plum Island Animal Disease Center (PIADC) Project*** – FY 2010: \$35.880 million; FY 2011 estimate: \$36.675 million. Researches contagious animal diseases (e.g., foot-and-mouth) identified in other countries. PIADC's mission is to develop strategies and vaccines to protect the Nation's animal industries and exports from foreign animal diseases accidentally or deliberately introduced into the United States. DHS and USDA jointly perform the R&D work at PIADC. Both organizations have a research presence, including laboratory employees, but DHS is responsible for the operations and maintenance of the facility. The combined work of both agencies supports the S&T Directorate's agro-terrorism countermeasures programs. Research at the facility occurs in BSL-2, BSL-3, and BSL-3Ag laboratory spaces.

PIADC is located on Plum Island, off the eastern end of Long Island, New York. The Center is a self-sustaining operation, with its own power plant, fuel storage, fire protection, waste disposal, and security systems. The S&T Directorate also provides the only ferry transport to and from the island and is responsible for operating and

maintaining the ferries, docks, and harbor. The S&T Directorate provides the day-to-day operational support, including the operations work force. Major operations costs include security, utilities, and fuel in FY 2009, FY 2010, and FY 2011.

***National Biodefense Analysis and Countermeasures Center (NBACC) Operations Project*** – FY 2010: \$30.002 million; FY 2011 estimate: \$30.302 million. Provides the capability to characterize current and future biological threats, assess their impacts, and inform the development of countermeasures and vaccines. NBACC also conducts bioforensic analysis of evidence from biocrimes and terrorism to support law enforcement's efforts to attribute crimes to the perpetrators. The unique missions of threat characterization and bioforensics enhance the Nation's overall biodefense capabilities. NBACC will closely collaborate with the FBI and other law enforcement agencies.

NBACC is located at Fort Detrick, MD and is part of the National Interagency Biodefense Campus that includes HHS, DOD, and USDA. Construction began in FY 2006, and office and administrative spaces will be ready for occupancy in FY 2010. The S&T Directorate began operating NBACC as a Federally Funded Research and Development Center (FFRDC) in FY 2007. The FFRDC plans, manages, and executes the NBACC research programs and operates the facility. In FY 2009, FY 2010, and FY 2011, operations costs include NBACC management through the FFRDC, security, equipment/furnishings, utilities and site services, fees, and insurance.

***Transportation Security Laboratory (TSL) Project*** – FY 2010: \$15.545 million; FY 2011 estimate: \$13.034 million. Develops civil transportation security technologies, such as explosives and weapons detection systems. TSL is a science and engineering laboratory that develops promising technologies to the point of operational test and evaluation. TSL supports the S&T Directorate's explosives countermeasures programs and TSA.

TSL is located at the Federal Aviation Agency (FAA) William J. Hughes Technical Center in Atlantic City, N.J. The real property and facilities belong to FAA. The FY 2009, FY 2010, and FY 2011, major operations costs include rent, buildings maintenance, utilities, security, and information technology.

**Salaries and Benefits Thrust Area** – FY 2010: \$18.001 million; FY 2011 estimate: \$19.469 million. Consists of salaries and benefits for non-Headquarters, Federal employees located at the Directorate's laboratories. These employees operate and execute programs at the DHS laboratories.

**Department of Homeland Security**  
**Science & Technology**  
**Research, Development, Acquisitions, and Operations**  
**Radiological and Nuclear**  
**Program Performance Justification**  
(Dollars in Thousands)

**PPA: Radiological and Nuclear**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2009 Actual</b>	-	-	-
<b>2010 Enacted</b>	-	-	-
2011 Adjustments-to-Base	-	-	109,000
<b>2011 Current Services</b>	-	-	<b>109,000</b>
<b>2011 Total President's Budget</b>	-	-	<b>109,000</b>
Total Change 2010 to 2011	-	-	109,000

The Science and Technology (S&T) Directorate requests \$109.000 million for the Transformational Research and Development Radiological and Nuclear Division; of this amount, \$2.725 million supports the Small Business Innovation Research (SBIR) program.

The Radiological and Nuclear (rad/nuc) Division identifies, explores, develops, and demonstrates scientific and technological approaches that address gaps in nuclear detection and response and recovery, such as: dramatically improving the performance of nuclear detection components and systems; significantly reducing the operational burden of the rad/nuc detection mission; or responding to and recovering from rad/nuc attacks. Dramatic technological advances include improvements in system or component performance; reduction in acquisition and maintenance cost; and improvement in reliability, reducing operational burden of users in the field. S&T will use the Capstone Integrated Product Team (IPT) process to identify high-priority customer capability gaps.

The Radiological and Nuclear research is being transferred from DNDO to the S&T Directorate to take advantage of economies of scale and the multi-disciplinary research activities within the S&T Directorate. The establishment of DNDO originally collocated the rad/nuc R&D, policy, detection architecture and acquisition activities of DHS addressing the rad/nuc threat to ensure a cohesive alignment of mission and goals. With the transfer, S&T's IPT process offers a mechanism to ensure that the rad/nuc R&D continues to align with the DNDO mission and goals. Bringing all of the fundamental research in DHS together in one component allows for economies of scale that range from the administrative to the scientific research aspects of the program. The benefits of

collaborative research across the S&T Directorate are immediately apparent when considering the basic physics behind rad/nuc detection. There are many similarities in the technologies used to identify chemical, explosive, and rad/nuc threat materials among other commonalities. Bringing these research programs together creates a more cross-disciplinary environment for the basic research and transition components of all the programs. It also creates a synergy between all sensor-developing activities, which eventually will all need to operate in the same environment if not the same device. The alignment of the customer mission, coupled with the efficiencies achieved by transferring the R&D to the S&T Directorate and the new opportunities afforded through multi-disciplinary research activities provide an opportunity to create a more effective rad/nuc R&D program within the S&T Directorate.

### **CURRENT SERVICES PROGRAM DESCRIPTION**

The Radiological and Nuclear (rad/nuc) Division identifies, explores, develops, and demonstrates scientific and technological approaches that address gaps in nuclear detection, response, and recovery, such as: dramatically improving the performance of nuclear detection components and systems; significantly reducing the operational burden of the rad/nuc detection mission; or responding to and recovering from large-scale rad/nuc attacks. Dramatic technological advances include improvements in system or component performance; reduction in acquisition and maintenance cost; and improvement in reliability, reducing operational burden of users in the field. The Capstone Integrated Product Team (IPT) process identifies high-priority customer capability gaps in close cooperation with the Domestic Nuclear Detection Office (DNDO).

The S&T Directorate addresses Homeland Security Presidential Directive (HSPD): HSPD-14, *Domestic Nuclear Detection*, which provides a comprehensive framework for our Nation's nuclear defense and charges DHS to continue to advance nuclear and radiological detection through an R&D program in rad/nuc detection, response, and recovery technologies. This effort includes four major program areas: Advanced Technology Demonstrations, Response and Recovery (R&R), Exploratory Research (ER), and the Academic Research Initiative.

**Nuclear Detection Advanced Technology Demonstration (ATD) Program** – FY 2011 estimate: \$17.700 million. This program area accelerates development, characterization, and demonstration of leading-edge technologies that address critical gaps nuclear detection. Results of the characterization form the basis for a subsequent cost benefit analysis (CBA) that objectively determines whether the technology should transition to system development and eventual production and deployment. ATDs encompass four distinct phases: preliminary design review (PDR), critical design review (CDR), characterization readiness review (CRR), characterization assessment, and CBA. In FY 2010, the S&T Directorate, in conjunction with DNDO, will perform an extensive program review to determine whether to continue the following ATDs, based on program progress and potential.

*Shielded Nuclear Alarm Resolution (SNAR) ATD Project* – Develops and characterizes advanced technologies to resolve alarms and definitively verify the presence of special nuclear material (SNM) in shielded and/or cluttered environments. The project has two principal applications: 1) Dramatic performance enhancement to commercially or near commercially available x-ray radiographic non-intrusive inspection (NII) screening systems by integrating solutions directly into hardware and software to substantially reduce the number of manual inspections while increasing probability of SNM detection; and 2) Targeted and choke point screening in multiple venues, including vehicle border crossings, checkpoints, rail, air cargo, and general aviation, with rapidly re-locatable inspection systems.

*Intelligent Radiation Sensing System (IRSS) ATD Project* – Creates data fusion software to maximize performance of co-deployed detection hardware connected by a wireless network. IRSS will leverage advances in small, efficient directional detectors, advanced distributed detection algorithms developed under various ER programs, and phenomenology studies characterizing the requirements for in-transit detection. USCG boarding parties and security teams at special events could use the networked system, which may include many disparate types of detectors. This system could improve sensitivity, expand surveillance area, locate threats faster, and detect and identify radiation sources better compared to single detectors or multiple autonomous (non-networked) detectors.

**Response and Recovery Program** – FY 2011 estimate: \$10.000 million. The Response and Recovery program provides advanced planning, develops CONOPS, and funds exercises and training for responding to and recovering from rad/nuc attacks. In FY 2011, the S&T Directorate plans to initiate work in this new area. Rad/nuc attacks have the potential to devastate and/or contaminate large portions of a city, covering multiple city blocks and the facilities therein. This program will provide more rapid and cost-effective post-attack cleanup and restoration by developing a systems approach for the restoration of citywide areas. Restoration demonstrations, which bring together Federal, State, and local partners to develop, test, and then share the CONOPS for key scenarios, are at the heart of this approach. The S&T Directorate will partner with FEMA, EPA, OIP, the Department of Defense (DOD), the Department of Energy (DOE), the Occupational Safety and Health Administration (OSHA), and the State and local public health and response communities to build on existing expertise to further formulate this area.

**Nuclear Detection Exploratory Research Program** – FY 2011 estimate: \$60.075 million. The ER program area explores innovative, high-risk, early-stage, ideas that can make transformational contributions to reduce the risk of nuclear terrorism. Specifically, ER develops technology and techniques that: 1) address capability gaps in radiological and nuclear detection; 2) provide substantial performance improvement or cost reduction of rad/nuc detection capabilities; and 3) techniques to improve nuclear forensics. Successful technology may transition to support a subsequent ATD or spur commercial development. ER also provides performance modeling, improved algorithm development, and other support capabilities for DND. In FY 2010, the S&T

Directorate, in conjunction with DNDO, will perform an extensive program review for all projects within the Exploratory Research (ER) program.

*Materials Research and Other Supporting Technologies Projects* – Advances radiation detection through focused research in sensor materials, front-end electronics, signal processing, modeling, and supporting technologies. Advances in one or more of these areas can provide new and improved capabilities to search and screen for nuclear and radiological materials of concern, improved identification of these materials, and reduced or simplified operational burden for end-users. Elements of this project are noted below:

*Advanced Scintillator Development Project* – Explores advanced gamma-sensitive scintillator materials that most deployed radiation detection systems use (including large portal monitors and mobile and hand-held detectors). This project researches materials to 1) improve energy resolution and hence improve capabilities to discriminate threat from benign radiation sources; 2) increase available volume and other scintillator parameters to improve detector element sensitivity; and 3) decrease costs through improved fabrication techniques and lower-cost raw materials. In FY 2011, the project plans to scale-up low-rate production efforts for large-size, high-performance scintillators and complete high-throughput screening of thousands of candidate materials for new scintillators, with the most promising identified for further development as next generation scintillators.

*SrI Near Term Project* - Leverages break-through scintillator material development and solid-state replacements for photomultiplier tubes (PMT). The project will build upon advances in new detection materials discovered under previous Exploratory Research advanced scintillator projects. Strontium iodide (SrI) has demonstrated excellent energy resolution and low cost, excellent growth characteristics with demonstrated excellent performance for both gamma and neutron detection. The PMT replacements would be much more compact, lower power, lower cost, and more rugged, enabling high-performance devices in a compact form factor. New devices utilizing these improvements will be developed as lower cost, greater efficiency small gamma detection systems.

*Advanced Semiconductor Development Project* – Investigates room-temperature operating materials to sense and characterize radiological threat materials. Current state-of-the-art high-performance semiconductors require cryogenic cooling, which significantly limits deployment of detector systems using these materials. This project researches: 1) novel semiconductor materials or 2) economical production methods (less than \$1000/cm<sup>3</sup>) for high-performance semiconductor materials. In FY 2011, this project plans to transition several new high-performance semiconductors into detector system prototypes; develop low-rate production infrastructure for at least one high-performance semiconductor; and complete an information-based search for new candidate materials for semiconductors.

*Photomultiplier Tube (PMT) Replacements/Photon Conversion Project* – Investigates solid-state and other semiconductor-based technology for converting scintillator light to

electrical signals to replace PMTs (which are large, expensive, fragile, high-power devices susceptible to electromagnetic interference and other environmental effects). In FY 2011, the project plans to develop three or more alternative technologies to PMTs.

*Passive Detection Systems Project* – Develops next-generation neutron and gamma ray detection systems. Commonly deployed detection systems use large polyvinyl toluene (PVT) panels in radiation portal monitors and sodium iodide scintillators, high-purity germanium, semiconductor detectors for hand-held radionuclide identification systems, and helium-3 gas proportional counters for thermal neutron detection in various applications. Research in this program encompasses new materials, advanced electronics, novel detection configurations, and specialized algorithms to provide a range of advanced capabilities including: 1) longer range standoff detection of threat materials, 2) improved differentiation of threat materials from environmental background and benign sources of radioactivity, and 3) improved detection sensitivity.

*Long Range Stand Off Detection Near Term Project* – This project will develop a long-range stand-off detection capability for airborne and maritime applications. Specifically, the project will target sensor systems to be carried aboard rotary- or fixed-wing aerial platforms, as well as shipboard systems with the goal of threat localization and identification. The project will focus on a sensor system to be used in stand-off maritime inspections conducted by aerial platforms, but could also be used for land-based targeted search applications and urban mapping. This project will leverage prior work on modeling of sources inside water crafts and target-linked gamma-ray imaging projects to provide combined video and radiation information. It is also expected that the project will include detailed investigations of dynamic background corrections associated with both maritime and airborne measurements.

*Gamma-Ray Imaging Project* – Uses gamma-ray imaging, a concept borrowed from nuclear medicine and astrophysics applications, to increase standoff range, directionality, and localization of threat objects, while reducing the effects of natural background radiation. In FY 2011, the project plans to fully develop and test a hybrid Compton imaging - coded aperture passive detection system using semiconductor materials, which will enable more effective source detection and localization. Additionally, the project plans to conduct a proof-of-concept (PoC) of a 2-dimensional video tracking capability paired with a Compton imager.

*Helium-3 Replacement Technologies and Fast Neutron Detection Project* – Explores near-term and longer-term alternatives to helium-3 detectors currently used in various radiation portal monitor (RPM) applications as well as hand-held and personal radiation detection instruments. Helium-3 is a vital isotope in instrumentation for neutron detection. It has a high absorption cross section for thermal neutron beams and is used as a converter gas in neutron detectors. Helium-3 is difficult to acquire due to limited reserves and the inability to produce or acquire additional stocks. This project investigates a range of materials and sensor systems. In FY 2011, the project plans to transition several technical alternatives to helium-3 to full testing and/or product

acquisition. The project also plans to demonstrate stilbene crystals for neutron detection, enabling low-cost production of these detectors.

*CLYC Detector Near Term Project* - Leverages break-through scintillator material development and solid-state replacements for photomultiplier tubes (PMT). The project will build upon advances in new detection materials discovered under the Materials Research Project. Cesium lithium yttrium chloride (CLYC) has demonstrated excellent energy resolution and low cost with demonstrated excellent performance for both gamma and neutron detection. The PMT replacements would be much more compact, lower power, lower cost, and more rugged, enabling high-performance devices in a compact form factor. This project will combine these breakthroughs for new detectors with both gamma and neutron detection capability as replacements for traditional small detection systems that relied on Helium – 3.

*Active Detection Project* – Improves detection technologies for SNMs, which produce a relatively small passive signature that can be easily shielded and make stand-off, passive detection difficult. Active detection uses ionizing radiation either to produce a unique signature from SNM or to increase the inherent signature of the materials (or both) to improve detection. Active Interrogation (AI) methods employ photons, neutrons, or other particles to penetrate shielding containers, vehicles, or objects. This program researches enabling component technologies and algorithms needed to improve the performance and reduce the cost and size of AI systems. Elements of this project are noted below:

*Novel Active Detection Source Project* – Researches a range of generator/accelerator technologies for Active Detection. AI detection schemes require highly compact, efficient, and flexible sources of beam-like ionizing radiation. Efforts in this project span basic research in nuclear reactions supporting particle or electromagnetic energy generation, to advanced prototype designs that can transition to ATDs or directly to system development. In FY 2011, the project plans PoCs for three types of AI sources.

*Active Detection Detectors, Systems, and Concepts Project* – Creates effective AI systems by pairing active detection sources with appropriate detectors, supporting electronics, signal processing and signal analysis algorithms. Neutron and gamma-ray detectors uniquely require compatibility with high count-rates, fast recovery times and good-to-high energy resolution. Advanced enabling detector technologies also require ultra-fast electronics and algorithms to process generated detector signals. In FY 2011, the project plans to conduct a series of PoCs including 1) a mobile and re-locatable AI system for aircraft, 2) a high-rate neutron detector for AI systems, 3) a portable AI system, and 4) an AI detector system for cargo with advanced algorithms to enable material/isotope identification. Also in FY 2011, the project plans to research and identify all potential signatures and user-community requirements for detecting threat materials (e.g., other contraband, including explosives) that might be hidden on general aviation aircraft.

*Algorithms, Modeling, and Software Development Project* – Researches signal processing and signal analyses that improve detection and characterization of signals from threat

objectives, and compensation, correction, or reduction of background noise to improve detector performance. Normally occurring background radiation affects detector sensitivity and limits current radiation detection technologies' performance. Further, temporal and spatially varying environmental background and nuisance sources (e.g., benign materials containing naturally occurring radioactive materials and patients experiencing nuclear medicine procedures) often lead to unacceptable false alarm rates. This program uses machine language and correlated data to improve the sensitivity/specificity of nuclear detection and models detector performance. In FY 2011, the program plans to make substantial improvements in the modeling and simulation code to improve usability and accuracy for various passive and active detection scenarios.

*Forensics Data Collection and Analyses Project* – Develops analytical techniques for determining the origin and transit route of nuclear materials. Nuclear forensics analyzes pre-detonation materials and supports analysis of post-detonation materials. These analyses inform and support attribution and response decision-making. Laboratory analysis determines physical, chemical, radiological, or morphological properties of sample material or debris. Analytical results help determine specific processing the material underwent, geographic origins, transport pathways, and intended use of the materials. In FY 2011, the program plans to research and develop Stimulated Electron Emission (SEE) to perform nuclear forensics on containers and other common surfaces exposed to radiation more rapidly and accurately.

**Academic Research Initiative (ARI) Program** – FY 2011 estimate: \$18.500 million. This program has two primary focus areas: 1) Engages the academic community in rad/nuc research goals and builds a community dedicated to solving long-term, high-risk research issues; and 2) develops the next-generation of researchers with expertise in nuclear and radiological detection technologies. Since FY 2007, DNDO partnered with the National Science Foundation (NSF) to execute ARI. NSF administers the proposal solicitation, evaluation, and grant award process as well as the first year of grant funding. The DHS Grants Office administers the subsequent years in conjunction with the S&T Directorate. ARI also funds academic disciplines traditionally not associated with radiological/nuclear detection, such as social sciences, to submit ideas and proposals.

*Fundamental Research in New Radiation Detector Materials Project* – Focus on long-term research aimed at developing greatly improved radiation detector materials that are highly sensitive, selective, and stable. Research to significantly improve the yield and performance of sensor materials beyond those presently available is needed with particular emphasis on the growth, processing, and characterization of new detection materials. This includes development and improvement of scintillator materials (e.g., faster response, higher light output, better linearity, and improvements in growth and fabrication) as well as semiconductor materials (e.g., reducing impurities, optimizing charge transport, allowing room temperature operation, and innovatively improving contacts and charge collection) with the goals of excellent efficiency and energy resolution at room temperature. In FY 2009 several new nanomaterials were investigated and the first synthesis of enhanced nanophosphor materials was completed. A new scintillating garnet was also discovered that utilized yttrium, gallium, gadolinium, and

aluminum. In FY 2010, a detailed examination of cadmium magnesium telluride (CdMgTe) as a choice for room temperature gamma-ray detector with a focus on understanding the Te inclusions and mitigating their effects will be accomplished. In FY 2011 the characterization of new candidate semiconductor materials including PbOAl, BiI, SnGeS, PbGeS is planned. It is also planned to benchmark models providing a fundamental understanding of scintillator non-proportionality. In FY 2011 the characterization of new scintillator materials incorporating quantum dot technology is anticipated.

*Fundamental Research in Novel Nuclear Detection System Concepts and Architectures Project* – Sponsored research in this area are intended to explore radically new approaches to threat detection, eventually leading to sensor or detection systems that are highly sensitive to nuclear and radiological signatures and selective in the ability to distinguish and locate these materials from naturally occurring background. Research into new detection system concepts, architectures, or networks that can support detection of nuclear and radiological threats being transported via general aviation (non-commercial aircraft), small maritime craft (under 300 tons), and/or across the expansive land borders between official Points of Entry are of particular interest. In FY 2009, the first design of a photonics-based radiation sensor was completed. In FY 2010 ARI efforts will complete characterization and fabrication of a photonics-based nuclear radiation sensor and demonstrate a Si-drift detector as a Compton imager. In FY 2011, S&T plans research in the extension of multilayer screening algorithms from port security applications to aviation-based applications.

*Fundamental Research in Alternative Neutron Detection (He3 Alternative) Technologies Project* – Focus is on developing greatly improved neutron detectors, detector systems, and/or materials that provide substantial improvements over existing Helium-3 technologies. Research to significantly improve the yield and performance of neutron sensitive materials, other than Helium-3, beyond those presently available is needed with particular emphasis on the growth, processing, and material characterization. This includes development and improvement of neutron sensitive scintillator materials as well as semiconductor materials with the goals of excellent efficiency and neutron energy discrimination. Additionally, neutron detection systems that improve the directionality, localization, and/or imaging capabilities are also needed. In FY 2009, new neutron sensitive materials were synthesized and characterization of high efficiency boron arsenide crystals for neutron detection was completed. In FY 2010, the first growth and structural characterization of boron phosphide crystals for high efficiency neutron detectors as well as the complete characterization and testing of a novel solid-state self powered neutron detector will be achieved. In FY 2011, S&T plans to evaluate an innovative direction-sensitive neutron detector based on multilayer drift chamber technology.

*Fundamental Research in Active Detection Technologies, Signatures, and Sources Project* – Improves the automated material discrimination and/or anomaly detection capability of NII systems used for air, land, and sea cargo; vehicle scanning; and human portable scanning applications. Existing NII systems use radiography, computed

tomography, spectral analysis including nuclear resonance fluorescence (NRF), and neutron-based assays. Fundamental research in these areas address full-systems or system components including: 1) novel low-power, low-weight/cube, high-yield D-D neutron production; 2) high-efficiency, fast-recovery, low-cost spectral detectors; 3) high-efficiency, threshold neutron detectors; and/or 4) automated image analysis algorithms for single and dual energy radiography systems. In FY 2011, the program plans to establish a university-based user facility with a new accelerator, enabling novel nuclear-reaction studies. The program also plans to evaluate a new methodology for direct photon generation using Doppler-compensated inelastic electron scattering. Finally, the program plans to develop and evaluate new signal processing tools for active interrogation systems using nuclear resonance fluorescence.

*Fundamental Research in Expert Systems, Networks, Algorithms, and Data Processing for Nuclear Detection Project* – Investigates innovative data processing and analysis techniques that will lead to significant performance improvements, including 1) accuracy of spectral analysis of gamma-ray sensor systems, 2) sensitivity and precision of detection systems, 3) sensor fusion (both radiation and other sensors), 4) detector implementation and networking. The research includes significant simulation and modeling to provide a fundamental basis to support these new approaches. In FY 2011, the program plans to complete a university-based, machine-learning facility integrating new radiation detection technologies. Additionally, the program plans to develop New Compton imaging algorithms to improve radiation detector sensitivity and benchmark models and algorithms for use in novel electron-tracking detector systems.

*Fundamental Research in Nuclear Forensics Technologies Project* – Advances analytical techniques used to determine the origin and transit route of pre-detonation nuclear materials. Research emphasis includes 1) identifying ways to improve techniques and methodologies (i.e., speed, accuracy, and precision in both existing and novel methods) for the physical, chemical, radiological, or morphological analysis of nuclear or radioactive materials, including determining specific processing the material underwent, geographic origins, transport pathways, and intended use; 2) improving the separation or analysis of non-nuclear material associated with nuclear materials; and/or 3) improving the use of signatures to identify source materials in the nuclear fuel cycle. In FY 2011, researchers plan to complete a study of complexation using absorption spectroscopy, and x-ray absorption spectroscopy (XAS). Additionally, the program plans to translate macro-scale electrochemistry to microelectrodes and characterize trivalent actinide electrochemical behavior.

**Science & Technology**  
**Research, Development, Acquisitions, and Operations**  
**Test and Evaluation Standards**  
**Program Performance Justification**  
(Dollars in Thousands)

**PPA: Test and Evaluation/Standards**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2009 Actual</b>	-	-	<b>27,332</b>
<b>2010 Enacted</b>	-	-	<b>29,000</b>
2011 Adjustments-to-Base	-	-	170
<b>2011 Current Services</b>	-	-	<b>29,170</b>
2011 Program Change	-	-	(5,996)
<b>2011 Total President's Budget</b>	-	-	<b>23,174</b>
Total Change 2010 to 2011	-	-	(5,826)

The FY 2011 request for Test and Evaluation Standards is \$23.174 million; of this amount, \$0.579 million supports the Small Business Innovation Research (SBIR) program. The FY 2011 request reflects a reduction of \$5.826 million due to the funding of higher priority items within the department.

**CURRENT SERVICES PROGRAM DESCRIPTION**

The Test & Evaluation/Standards division (TSD) supports the overall mission of DHS, by providing T&E direction, oversight, assistance, and standards coordination to support all of DHS, and the larger Federal, State and local First Responder community. TSD also works closely with the divisions of S&T to coordinate standards development in parallel with technology - ensuring that performance standards for DHS funded equipment are available, and that there are test methods and test plans to accompany DHS acquisitions.

Through review boards and working groups, TSD leads standards development, test protocol establishment, test plan review, and test result review. The Division also works with Director of Operational Test and Evaluation (DOT&E) approved operational test plans and assesses the adequacy of operational testing for acquisition programs throughout the entire department. Beyond DHS, TSD leads several Federal efforts to coordinate standards development, test method development, and the establishment of a range of test and evaluation options for Federal, State, local and private sector users.

**Standards Thrust Area** – The Office of Standards funds and coordinates standards development for equipment used and purchased by DHS. Working with scientists, the

Standards Thrust Area identifies standards needs and funds initial standards development through a variety of performers – most notably research scientists at the nation's measurement lab, the National Institute of Standards and Technology (NIST). Once the measurement science is solid, the office works with numerous standards development organizations to finalize homeland security standards in a consensus environment - a forum which includes users, manufacturers and the government.

DHS does not have authority to impose regulatory standards and must therefore promote the development of voluntary consensus standards. The Standards thrust area gathers requirements and facilitates the adoption of standards through formal standards working groups, interagency task forces, conferences, and workshops with private-sector standards organizations, such as the National Fire Protection Association (NFPA) and American Society for Testing and Materials (ASTM) International. The Standards thrust area does not seek to generate new standards, but solicits and endorses existing national-level standards.

***Borders/Maritime Standards Program*** – FY 2010: \$0.820 million; FY 2011 estimate: \$0.900 million. Develops standards for cargo security and Radio Frequency Identification Device (RFID) technologies that are used to tag and track containers. In FY 2009, the program provided measurement data, performance metrics, and test metrics towards standards for RFID chip integrity and interference of RFID devices in partnership with Transportation Security Laboratory (TSL), Department of State, Department of Commerce, National Security Agency, and Central Intelligence Agency. In FY 2010, the program will deploy a pilot RFID counterfeit detection system. In FY 2011, the program plans to develop performance requirements for RFID counterfeit detection systems.

***Chemical/Biological Standards Program*** – FY 2010: \$3.116 million; FY 2011 estimate: \$2.500 million. Develops standards related to chemical and biological threat detection. This includes development of a comprehensive suite of performance standards for detection equipment, guidance on how to respond to chemical/biological incidents, and development of surrogate materials for testing. In FY 2009, the program finalized standard test materials for anthrax and ricin; worked with the Office of Science and Technology Policy (OSTP) to release interim guidance for chemical and biological decontamination; and developed guidance for First Responders to assess whether chemical and biological detection technologies met manufacturer claims. In FY 2010, the program will develop draft training protocols for decontamination guidelines and initiate the chemical warfare agents/toxic industrial chemicals detection standards program, including standard test methods for instrument performance. In FY 2011, the program plans to finalize training protocols for decontamination guidance and develop draft standards for chemical standoff detection technologies.

***Command, Control, and Interoperability Standards Program*** – FY 2010: \$0.945 million; FY 2011 estimate: \$0.400 million. Develops standards to optimize emergency management using the National Response Framework and the National Incident Management System. In FY 2009, the program adopted and updated existing incident management standards and completed a gap analysis for new requirements. In FY 2010,

the program will initiate a study of human-machine interface standards to improve the ease-of-use of First Responder equipment for emergency operation centers, First Responders, and other homeland security end users, including those involved in baggage screening. In FY 2011, the program plans to support development of a suite of Incident Management (IM) standards, which includes training on initial response to possible WMD attacks.

***Explosives Standards Program*** – FY 2010: \$3.866 million; FY 2011 estimate: \$3.295 million. Develops standards related to explosives detection and blast mitigation, which include standards for detectors and protective equipment, body-scanning systems, and cargo. In FY 2009, the program drafted standards for trace explosives detection; developed draft standards for next generation high-energy computed tomography scanning systems; and developed a methodology and test kit for quality control and assurance of field-deployed equipment to determine their effectiveness in detecting explosives. The program also initiated standards development for standoff explosives detectors and improvised explosive device (IED) countermeasures technology. This included radio frequency countermeasures used in jamming technologies and terahertz technologies that can penetrate a wide variety of materials for body scanning. In FY 2010, the program will complete the development of trace explosives standard test materials for RDX and C4 explosives, and finalize/adopt standard test methods for X-ray inspection systems and body scanners. In FY 2011, the program plans to revise the X-ray body-screening system standard using results from instrument testing and evaluations.

***Human Factors Standards Program*** – FY 2010: \$1.950 million; FY 2011 estimate: \$1.550 million. Develops standards for biometric technologies and government personnel credentials. In FY 2009, the program provided draft standards for image quality for face, fingerprint, and iris biometrics and provided on-line test data sets that manufacturers use to test and develop next-generation software. The program also developed the National Voluntary Laboratory Accreditation Program (NVLAP). This laboratory accreditation program provides the requirements laboratories must meet before they are qualified to test DHS biometrics equipment. In FY 2010, the program will implement biometric data standards to improve the interagency interoperability of collected biometric information throughout federal government. The program will also develop rules that require biometrics equipment to be tested in an accredited biometrics laboratory prior to DHS procurement. In FY 2011, the ongoing usability biometrics standards program plans to continue development of protocols for the testing of multimodal biometrics.

***Infrastructure and Geophysical Standards Program*** – FY 2010: \$5.539 million; FY 2011 estimate: \$3.875 million. Develops standards for First Responder personal protective equipment to enable State and local agencies to purchase equipment that has been rigorously tested against standards and certified to meet National Fire Protection Association (NFPA) and National Institute for Occupational Safety and Health (NIOSH) standards. In FY 2009, the program supported the drafting of all-hazards protective clothing standards with attention to dermal hazards posed by toxic industrial chemicals and toxic industrial materials. In addition, the program implemented standards

development for hybrid CBRN respiratory protection equipment, such as combined self-contained breathing apparatus and air purifying respirator systems. In FY 2010, the program will review existing respiratory protection guidelines, and in collaboration with other Federal partners, propose modifications to existing standards. In FY 2011, the program plans to finalize revisions of the protective clothing standard and initiate the development of performance testing guidelines.

***Platforms Program*** – FY 2010: \$1.570 million; FY 2011 estimate: \$1.500 million. Identifies, through ASTM International, Institute of Electrical and Electronic Engineers (IEEE) and NFPA, standards development needs in Urban Search and Rescue (USAR) robots, sensor networks, alert systems, and hazardous material (HAZMAT) equipment. The program emphasizes two areas: 1) mobile platforms, which includes robots, Unmanned Aerial Vehicles (UAVs) and other mobile detection applications; and 2) sensors and alert networks, which includes stationary sensor systems and the networks to support them. In FY 2009, the program supported the development of standard test methods for advanced sensors and mobility used in USAR robots. The program also began technology maturity assessments to identify new candidate sensor technologies and conducted a gap analysis of sensors distributed over a web application. In FY 2010, the program will calibrate and characterize a test facility that can conduct standard test methods for USAR robots, as well as, produce user guides that assist in decision-making about appropriate robots for given situations. The program will also develop collaborative demonstrations with SBI net and Coast Guard using interoperable sensor technology. In FY 2011, the program plans to conduct workshops with responders and manufacturers of USAR robots and incident response robots to prioritize test methods. The program also plans to develop guidance for users to procure interoperable sensor networks and systems.

***Standards Development Program*** – FY 2010: \$2.215 million; FY 2011 estimate: \$2.100 million. Standards development requires consensus and significant resources across and outside DHS. This requires a unique commitment to partnerships and ongoing infrastructure (databases, working groups) and specific projects (biothreat identification protocols). For some private-sector standards development organizations, TSD must pay to maintain its membership and ensure voting rights in decision-making processes. TSD maintains relationships with standards-development organizations such as American National Standards Institute (ANSI), ASTM International, Institute of Electrical and Electronics Engineers (IEEE), and NFPA. These partners also include the Federal Emergency Management Agency's (FEMA) Incident Management System Integration Division, TSL, Association of Analytical Communities (AOAC) International, Homeland Security Studies and Analysis Institute (HSSAI), and the Interagency Board for Equipment Standardization and Interoperability (IAB).

TSD is also actively involved in the Voluntary Private Sector Accreditation and Certification Preparedness Program (PS-Prep). Congress identified four DHS components in Section 524 of Title IX of Public Law 110-53, "Implementing the Recommendations of the 9/11 Commission Act of 2007," and directed the Secretary to establish a program for accreditation and certification of private-sector preparedness.

The S&T Directorate leads the team on identification of standards to adopt for use in this program. In FY 2009, the program selected the ANSI-ASQ National Accreditation Board (ANAB) to develop and oversee the certification process, manage the accreditation, and accredit qualified third parties to carry out the certification in accordance with the accepted procedures of the program. In FY 2010 and FY 2011, the PS-Prep program will develop and refine criteria and processes to continuously evaluate and maintain preparedness standards for the private sector.

**Test and Evaluation Thrust Area** – The Office of T&E establishes policies and procedures and coordinates T&E resources to verify attainment of technical performance specifications and evaluate operational effectiveness/suitability prior to system deployment. T&E is working to ensure DHS integrates a uniform and centrally managed Departmental test and evaluation process into the systems engineering and acquisition lifecycle. The infrastructure area will assess, integrate, and coordinate DHS and non-DHS test assets to ensure adequate test capabilities are available to support acquisition programs.

**First Responder Technologies Program** – FY 2010: \$5.000 million; FY 2011 estimate: \$4.350 million. Maintains an operational T&E program for First Responder Technologies. In FY 2009, the Division collaborated with FEMA to assume management and funding responsibility for the System Assessment and Validation for Emergency Responders (SAVER) program that tests and assesses commercially available equipment that falls within the categories listed on the DHS Authorized Equipment List and provides the results along with other relevant equipment information to the First Responder community. In FY 2010 and FY 2011, the Division will continue to collaborate with FEMA to identify and prioritize specific product categories for assessment through the SAVER program. The SAVER program will continue to produce Assessment Reports that focus on answering responders' questions on how specific products perform. In addition, in FY 2010 and FY 2011, the SAVER Program will continue to produce Market Survey reports. These reports identify for the responder community what equipment is available in a specific product category and details the technical characteristics of that equipment.

**Infrastructure Program** – FY 2010: \$0.477 million; FY 2011 estimate: \$0.475 million. Assesses, integrates, and coordinates the Federal and non-Federal physical assets at colleges, universities, local governments, private research institutes, and companies. In FY 2009, the program completed the infrastructure review of DHS capabilities and developed a T&E capability matrix. In FY 2010, the program will refine the initial DHS T&E capability data and expand the T&E infrastructure review beyond DHS to other Federal capabilities. The goal is to establish a capability that will help programs to choose existing capabilities that meet their testing requirements rather than build duplicative infrastructure. In FY 2011, the program plans to identify DHS T&E infrastructure needs and work with the DHS components to resolve them. The program will continue to update the T&E infrastructure matrix.

***T&E Plans and Policy Program*** – FY 2010: \$0.500 million; FY 2011 estimate: \$0.450 million. Develops T&E policies and procedures that define T&E activities required of all DHS components throughout the system acquisition process. In FY 2009, the program finalized the interim T&E Directive that supplements the Department's adopted acquisition policy. The program also worked with the DHS Acquisition Workforce Division to establish the T&E certification requirements for T&E professionals within the department. In FY 2010, the program will update the T&E Directive, develop a T&E training course to support T&E certification for DHS personnel, initiate a study of the alternatives for an Operational Test Agent (OTA) for DHS, and initiate work on a T&E Guidebook for Program Managers across DHS. In FY 2011, the program plans to maintain and revise the T&E Directive, Guidebook, and training courses to reflect the current acquisition framework.

***Test Area/Capabilities Program*** – FY 2010: \$2.276 million; FY 2011 estimate: \$1.200 million. Works directly with over 60 DHS acquisition programs to assist in the development and execution of a robust T&E program that will lead to the evaluation of the program's effectiveness and suitability. In FY 2009, the program expanded its oversight function to all DHS Level 1 and non-delegated programs. The program provided T&E input to acquisition documents and supported the Acquisition Review Boards. DHS T&E also reviewed and/or approved over a dozen Test and Evaluation Master Plans for programs such as National Security Cutter, Fast Response Cutter, Secure Border Initiative Network, H-60 Medium range helicopter, BioWatch Gen-3, National Cyber Security, Passenger Screening Program, and Electronic Baggage Screening Program. In FY 2010, the program will continue its oversight function, as well as, expand to include new Level 1 and non-delegated programs, develop M&S T&E policy, and establish a DHS model verification, validation, and accreditation process. In FY 2011, the program plans to provide T&E oversight of all existing and emerging Level 1 and non-delegated acquisition programs and maintain Modeling and Simulation T&E Policy.

**Department of Homeland Security**  
**Science & Technology**  
**Research, Development, Acquisitions, and Operations**  
**Transition**  
**Program Performance Justification**  
(Dollars in Thousands)

**PPA: Transition**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2009 Actual</b>	-	-	<b>18,347</b>
<b>2010 Enacted</b>	-	-	<b>46,134</b>
2011 Adjustments-to-Base	-	-	271
<b>2011 Current Services</b>	-	-	<b>46,405</b>
2011 Program Change	-	-	(4,271)
<b>2011 Total President's Budget</b>	-	-	<b>42,134</b>
Total Change 2010 to 2011	-	-	(4,000)

The Science and Technology (S&T) Directorate requests \$42.134 million for Transition; of this amount, \$1.053 million supports the Small Business Innovation Research (SBIR) program. The decrease of \$4.000 million reflects reductions to the First Responder Technologies program and the TechSHARE program.

**CURRENT SERVICES PROGRAM DESCRIPTION**

The Transition Office delivers near-term products and technology enhancements by working with the Department's components to expedite the technology transition process. The office provides personnel, processes, and resources to support the transition and transfer of S&T Directorate technologies to customers. Activities involve integrating technology development efforts across the S&T Directorate to develop the most cost effective and timely solutions and processes to meet customer requirements. The Transition Office carries out these core responsibilities through the following three thrust areas: Homeland Security Studies and Analysis Institute, SAFETY Act, and Transition.

**Homeland Security Studies and Analysis Institute (HSSAI) Thrust Area – FY 2010:** \$5.000 million; FY 2011 estimate: \$5.000 million. The S&T Directorate awarded a Federally Funded Research and Development Center (FFRDC) contract for HSSAI in March 2009. The purpose of HSSAI is to provide special technical expertise to Department components to analyze and conduct trade-off studies of mission-level goals and strategies, analyze operations and operational requirements, and evaluate performance metrics constrained by cost and schedule. HSSAI generally considers all

missions within the context of threat, consequence, and vulnerability risk reduction under the constraints of cost and schedule. The research agenda covers the spectrum of homeland security issues and activities, including threat trends and adversarial perspectives, information sharing and communications interoperability, border and transportation security, law enforcement, infrastructure protection, preparedness, emergency response, and training. In FY 2009 and FY 2010, the HSSAI continued to provide recommendations for policy and operational changes, as well as technology insertion concepts throughout the Federal, State, local, tribal, public and private sector organizations that make up the homeland security enterprise.

The studies and analyses include, but are not limited to:

- Develop top-level mission risk and risk reduction (threat, vulnerability, consequence) resource allocation models, component tradeoff simulations, and tools and metrics to evaluate mission tradeoffs and mission integration strategies;
- Develop system and system-of-system concepts through analysis of alternatives to address the most strategic and critical needs of the homeland security enterprise;
- Develop top-level program requirements and system performance and effectiveness metrics based on mission goals;
- Develop and promote standardization of effective and efficient operational modeling, simulation, test, and evaluation best practices for homeland security programs to provide independent and objective assessments based on mission and program goals;
- Design and provide support for homeland security-related exercises, games, and simulations, including the examination of past incidents, tabletop and operational exercises, and nominal operations to determine lessons learned and the implications for homeland security planning;
- Conduct operational analysis, particularly at field activities, for extended (months to one-to-two years) periods, to provide objective assessments, systems evaluations, and other technical and analytic support; and
- Use economic (lifecycle) and policy analyses to assess the distributed costs and benefits of alternative approaches to enhancing security including leveraging of homeland security, particularly research and development (R&D), assets across the Nation and with international partners.

In FY 2011, the program plans to conduct operations analyses to develop measurable and meaningful operational performance metrics as guided by DHS senior leadership.

**SAFETY Act Thrust Area** – FY 2010: \$8.680 million; FY 2011 estimate: \$8.680 million. The Office of SAFETY Act Implementation (OSAI) evaluates and qualifies technologies for liability protection in accordance with the *Support Anti-Terrorism by Fostering Effective Technologies (SAFETY) Act of 2002* and the supporting regulations of the Final Rule (6 CFR Part 25) implemented on July 10, 2006. As part of the *Homeland Security Act of 2002* (Public Law 107-296), the SAFETY Act provides risk management and liability protections for sellers of Qualified Anti-Terrorism Technologies. The

purpose of the SAFETY Act is to ensure that the threat of liability does not deter potential manufacturers or sellers of effective anti-terrorism technologies from developing, deploying, and commercializing these technologies. There are three key areas of focus for OSAI: operations, outreach, and coordination.

**Operations** – OSAI processes applications under the criteria stipulated by the provisions of the SAFETY Act expediently. As part of this process, OSAI evaluates the efficacy of candidate technologies based on criteria set forth in the Final Rule, considers the applicant’s current insurance situation, and advises DHS whether to issue SAFETY Act protections to the company.

In FY 2009, OSAI received a record high number of applications. To improve service to the applicants and keep up with increasing volume, OSAI worked to modernize its IT system, enabling the Office to handle an increased number of applications as the program continues to mature. In FY 2010 and FY 2011, OSAI will continue evaluating and streamlining business processes to ensure that at least 85 percent of applications are processed within the congressionally mandated 120 days.

**Outreach** – OSAI promotes homeland security technologies by raising public awareness of the benefits of liability protections available under the SAFETY Act, thereby expanding the creation, proliferation, and use of anti-terrorism technologies.

In FY 2009 and FY 2010, the program will continue its outreach efforts towards priority homeland-security technologies and under-represented technology areas to further industry participation. OSAI will continue to hold periodic SAFETY Act workshops inside and outside of the Washington, DC Metropolitan Area to reach more potential stakeholders and applicants. In FY 2011, OSAI will continue to reach out to those applicants that are eligible for renewal of their SAFETY Act awards to promote deployment of these effective anti-terrorism technologies.

**Coordination** – OSAI coordinates the SAFETY Act application review process across DHS and with other Federal agencies to support these partners in their missions and to minimize the burden on applicants for SAFETY Act protection. This crucial advanced coordination regularly occurs whenever the SAFETY Act can play an important role in pending Federal procurements.

In FY 2009, the SAFETY Act program expanded coordination with other Federal agencies to help create Federal best practices, standards, and guidelines and to work with public and private consortiums/associations to identify promising technologies for prompt consideration under the SAFETY Act, as well as sector-specific areas identified by the *National Infrastructure Protection Plan* (NIPP). In FY 2010, OSAI will work with universities and national laboratories that research, develop, and pilot new innovative homeland security technologies to educate and inform them about the SAFETY Act. In FY 2011, OSAI plans to work with the S&T Directorate’s international partners to identify promising technologies for consideration under the SAFETY Act.

**Transition Thrust Area** – Provides personnel, processes, and resources to support the transition and transfer of S&T Directorate technologies to customers. Integrates technology development efforts across the S&T Directorate to develop the most cost-effective and timely solutions to meet customer requirements. This work includes coordinating technology efforts with international agencies and other government agencies and providing an appropriate venue for first-responder input to the S&T Directorate’s transition process.

***First Responder Technologies*** – FY 2010: \$12.000 million; FY 2011 estimate: \$10.450 million. Develops and designs technologies to address capability gaps identified by Federal, State, local, and tribal First Responders in the First Responder Capstone Integrated Product Team (IPT). Using the prioritized capability gaps from the IPT, the S&T Directorate’s six divisions propose technology solutions. The First Responder IPT then prioritizes these technology solutions to determine which to fund. This program also tests technologies, assesses them for usability, and commercializes them so the technologies are available across all First Responder communities. In FY 2009, the S&T Directorate stood up the First Responder IPT and integrated it into the current product transition program. In FY 2010, Federal, State, local, and tribal First Responders will identify science and technology requirements and prioritize technology solutions proposed by the S&T Directorate divisions. The S&T Directorate, in continued partnership with the Naval Post Graduate School, will field-test First Responder prototype technologies. In FY 2011, the program plans to continue to field-test First Responder prototype technologies. It will also continue to coordinate the activities of and provide leadership to the S&T Directorate First Responder IPT.

**International and Interagency Programs**– FY 2010: \$3.642 million; FY 2011 estimate: \$3.642 million. Leverages the capabilities of external organizations, within the U.S. and abroad, to address high-priority homeland security needs. The International and Interagency Programs facilitate the S&T Directorate’s cooperative Research, Development, Test, and Evaluation (RDT&E) activities across Federal, State, local, territorial, and tribal governments, the international community, and the private sector. These activities include:

- Guiding the S&T Directorate's coordination of Federal government and private-sector efforts to identify and develop countermeasures against current and emerging threats;
- Leading a world-wide staff of science and technology liaison officers who help execute S&T Directorate programs of national and international scope and impact; and
- Facilitating both national and international technology awareness to avoid technological surprise and ensure the Department's technological superiority.

In FY 2010 and FY 2011, the International and Interagency programs will continue to leverage external organizations. The Interagency program will continue to expand S&T outreach to homeland security, emergency management, and related agencies at the State, local, territorial, and tribal, levels to strengthen partnerships and information. It will

continue to expand collaborative relationships and outreach with other entities, such as the Department of Defense (DOD), the Department of Energy (DOE), the National Guard, the Joint Staff, and appropriate Combatant Commanders to leverage RDT&E efforts and capabilities saving government funds by avoiding duplication of effort and investments. The Interagency program will conduct new and follow-up Regional Homeland Security Interagency Symposia to further strengthen DHS regional collaborative efforts and to collect State, local, territorial, and tribal input on technology gaps; to strengthen partnerships; to improve information sharing; and to communicate achievements. It will establish and coordinate the S&T First Responder IPT, which will provide a fair and equitable process for collecting and addressing technology gaps from the First Responder community Nation-wide. In addition, the Interagency program will leverage contacts made with homeland security, emergency management officials at the State, local, territorial, and tribal level to conduct on-site visits to significant disaster events to assess technology needs, serving as the primary link for the Directorate.

At the request of S&T Directorate's technical divisions, the International program will modify the grant solicitation program to provide for larger individual awards and fewer total awards in FY 2010. Larger awards (for a maximum of \$750,000 each and lasting no more than three years) have greater potential to leverage international capabilities in support of the divisions' missions to provide near- and longer-term capabilities to their DHS customers. The International program estimates funding between two to four international research projects in FY 2010 based on a technical review by a panel of subject-matter experts from inside the Federal government. Other planned International program activities in FY 2010 include numerous international workshops, conferences, and activities that will build capacity for international cooperation in the technical areas of S&T Directorate Divisions. International programs will facilitate participation in an International Conference on Science and Technology in Sweden in FY 2010. The program will also establish S&T Directorate agreements with at least two new international partners.

In FY 2011, the International program plans to maintain the scientist and engineer exchange program with two key partners. The program also plans to hold an International Conference on Science and Technology in the Pacific Asia Region. In support of the grant solicitation program, the program plans to fund international research projects in the same manner outlined for FY 2010. The grant solicitation will fund two to four international research projects (maximum of \$750,000 each and lasting no more than three years) based on a technical review by a panel of subject matter experts inside the Federal government.

***Program Transition*** – FY 2010: \$5.659 million; FY 2011 estimate: \$5.684 million. Aligns and coordinates the S&T Directorate's transition effort with Department components' requirements using Capstone IPTs. Product transition focuses on delivering near-term technology to meet customer-identified science and technology requirements, as well as informing the Basic Research and Innovation Offices of priority customer technology needs. The Capstone IPTs consist of thirteen functional homeland security areas: Border Security; Cargo Security; Chemical/Biological Defense; Cyber Security;

Counter-Improvised Explosive Devices (IED); Transportation Security; Incident Management; Infrastructure Protection; Information Sharing/Management; Interoperability; Maritime Security; People Screening, and the newest Capstone IPT, the First Responder IPT.

In FY 2009, the Transition Office identified appropriate support and analysis of customer gaps through the IPT process. In FY 2010, it will refine support and analysis of customer gaps through the IPT process and monitor efforts for cost, schedule, and capability to ensure the technology effectively transitions into acquisition. In FY 2011, the Office plans to refine the IPT process further, ensuring efficiency, effectiveness, increased leadership insight, customer involvement, and integration with component and Department planning activities to ensure technology gaps are incorporated in the IPT process at the earliest appropriate stage once identified.

The Commercialization Office manages the development and execution of programs and processes that identify, evaluate, and commercialize technologies that meet the operational requirements of DHS stakeholders – including operating components, the First Responder community, and critical infrastructure/key resources owners and operators. The Commercialization Office also develops and manages the S&T Directorate's outreach effort with the private sector to provide useful information on how to do business with the S&T Directorate. It establishes and fosters mutually beneficial public-private partnerships that lead to fielding technologies, products, and services to enhance the capabilities of Department stakeholders. The Office recently established two innovative public-private partnership programs, SECURE™ and FutureTECH™ programs, which enable collaboration of public and private entities to develop products, technologies, and services rapidly for DHS stakeholders. The Commercialization Office also developed and began implementing a comprehensive commercialization process for all of DHS. The program worked with the private sector to create a detailed repository of private-sector firms with the technologies, capabilities, and products that address identified capability gaps to assist in conducting analyses of alternatives. In FY 2010, the program expects a minimum of ten new SECURE™ Operational Requirements Documents (ORDs) generated by DHS stakeholders and 20 ORDs in FY 2011. In FY 2012, the program plans to generate and vet an additional 25 ORDs. For the FutureTECH™ Program, the Commercialization Office expects to continue the pilot phase of the program for FY 2010, with proper scale-up of current efforts and creation of additional critical research/innovation focus areas for eight new future needs in FY 2010 and ten more in FY 2011.

The Technology Transfer Program manages the Office of Research and Technology Application (ORTA), to conduct technology transfer in accordance with 15 USC 3710. The Technology Transfer Program also represents DHS in DOD's 1401 Technology Transfer Working Group, which identifies and transfers DOD technology, items, and equipment that can be used by Federal, State, and tribal First Responders. In FY 2009, the Technology Transfer Program commenced its annual Technology Transfer and Intellectual Property Training for all engineers and scientists. In FY 2009, ORTA established an Invention Evaluation Board (IEB) to assess the patentability of DHS'

inventions. The Technology Transfer Program will also establish a network to assist with creating partnerships for Cooperative Research and Development Agreements (CRADAs) and licenses, continue training engineers and scientists, and have all DHS laboratories fully participating in the Federal Laboratory Consortium (FLC). In FY 2011, the Technology Transfer Program plans to continue to pursue partnerships via R&D agreements and the licensing of intellectual property.

***Transition Pilot Program*** – FY 2010: \$1.000 million; FY 2011 estimate: \$0.000 million. Identifies, researches, develops, and transitions advanced technologies and manufacturing processes in the homeland security industrial base. The Homeland Security Research, Development, and Manufacturing Pilot (HomeTech) will significantly improve the affordability and mission capability of DHS products and systems by engaging in manufacturing initiatives that address the entire system life cycle and enable the timely transition of laboratory technology to industry and the marketplace.

***Technologies to Secure the Homeland and Advance Responder Effectiveness (Tech SHARE) Program*** – FY 2010: \$9.000 million; FY 2011 estimate: \$7.625 million. Consists of two projects: Tech Clearinghouse and TechSolutions.

***Tech Clearinghouse Project*** – Provides a certified and accredited web-based central resource system of technical information to serve as a one-stop-shop for the dissemination of homeland security science and technology information to Federal, State, local, and tribal agencies; the system and associated efforts encourage and support innovative solutions to enhance homeland security. Along with other outreach efforts (e.g., publication of a First Responder Technologies (R-Tech) monthly newsletter, participation at key First Responder conferences and events), the website also fulfills Section 313 of the *Homeland Security Act of 2002*. The Tech Clearinghouse provides: 1) government organizations with information to support procurement and grant guidance decisions; and 2) technology developers with requirements and operational information that can assist them in developing tools that are more useful. Tech Clearinghouse continually identifies and integrates new sources of relevant information for First Responders into its website development.

In FY 2009, the project incorporated new functions and capabilities into the portal to meet users' requirements and make periodic system upgrades to keep information relevant; it achieved over one million hits per month on the web portal. In FY 2009, the project also started development of a trusted and secure Communities of Practice website for First Responders. The first version of the website will go live in the second quarter of FY 2010, pending Office of Management and Budget (OMB) and certification and accreditation (C&A) approval. In FY 2010, the project will integrate content from other existing government agency databases that have relevant S&T Directorate information for First Responders. In FY 2011, the program plans to identify and integrate new sources of information into Tech Clearinghouse. Tech Clearinghouse efforts in FY 2011 include technical assistance to First Responders to solve matters related to technical deficiencies, policy, guidance, and/or governance issues.

*TechSolutions Project* – Rapidly addresses the technology gaps identified by Federal, State, local, and tribal First Responders. The TechSolutions project fields prototypical solutions in 12 to 15 months; establishes a cost that is commensurate with the proposal (normally one million dollars or less per project), and develops a solution that meets 80 percent or more of the identified requirement. First Responders are able to submit gaps to the program through the website, [www.TechSolutions.dhs.gov](http://www.TechSolutions.dhs.gov). TechSolutions validates capability gaps and First Responder priorities by working with a panel of First Responder subject matter experts to include the Inter-Agency Board (which comprises over 1,000 leaders from fire, police, Emergency Medical Services (EMS) throughout the United States).

In FY 2009, the project initiated prototype development of a multimodal assessment system capable of collecting sensor data and analyzing it against carefully tested medical algorithms, and for a vehicle-mounted chemical sensor capable of identifying 13 toxic industrial chemicals and reporting the results to a command post via a wireless network. TechSolutions also continued its development of an innovative self-contained breathing apparatus (SCBA) that reduces the ensemble's profile and weight and provides first responders with improved agility; a multi-band, multi-mode portable radio capable of operating on all first responder radio bands and frequencies; an improved multi-threat personal protection ensemble for law enforcement that leverages DoD investments in personal protection technology and systems to improve user survivability and operational performance; and a hand-held non-lethal optical law enforcement device that neutralizes and assures compliance of unruly and uncooperative individuals.

In FY 2010 and 2011, the program will continue to collect capability gaps received through the TechSolutions website and the First Responder Capstone IPT as a means for determining prototype and demonstration opportunities. TechSolutions plans to demonstrate up to six prototypes per year.

**Department of Homeland Security**  
**Science & Technology**  
**Research, Development, Acquisitions, and Operations**  
**University Programs**  
**Program Performance Justification**  
(Dollars in Thousands)

**PPA: University Programs**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2009 Actual</b>	-	-	<b>38,821</b>
<b>2010 Enacted</b>	-	-	<b>49,350</b>
2011 Adjustments-to-Base	-	-	304
<b>2011 Current Services</b>	-	-	<b>49,654</b>
2011 Program Change	-	-	(9,654)
<b>2011 Total President's Budget</b>	-	-	<b>40,000</b>
Total Change 2010 to 2011	-	-	(9,350)

The Science and Technology (S&T) Directorate requests \$40.000 million for University Programs; of this amount, \$1.000 million supports the Small Business Innovation Research (SBIR) program. The \$9.350 million decrease in FY 2011 reduces funding for the Centers of Excellence (COEs), Minority Serving Institutions (MSIs), and Education Programs.

**CURRENT SERVICES PROGRAM DESCRIPTION**

The University Programs Division supports research and education at U.S. colleges and universities to address high-priority homeland security issues and to enhance homeland security capabilities over the long term. The program brings together scientific minds from many academic disciplines and institutions. These scientists and engineers are developing new technologies and approaches to solve complex and challenging homeland security problems. The program focuses on building homeland security expertise in the academic community, creating strategic partnerships among universities and public agencies, and developing a new scientific workforce of homeland security experts. The primary customers for University Programs are the Department of Homeland Security (DHS) S&T Directorate's divisions, the DHS components, and Federal, State, and local government agencies.

Investments in university basic research and support for students in relevant fields are critical to preserving the U.S.'s strategic and economic security as well as supporting the Secretary's goals of:

- Protecting the Nation from dangerous people;
- Protecting the Nation from dangerous goods;
- Protecting Critical Infrastructure; and
- Building a nimble and responsive emergency response system and a culture of preparedness.

The University Programs Division carries out its activities through three thrust areas: 1) the DHS University Centers of Excellence (COEs), 2) the DHS S&T Directorate's Educational Programs, and 3) the Minority Serving Institutions programs.

**Centers of Excellence Thrust Area** – FY 2010: \$38.395 million; FY 2011 estimate: \$30.417 million. The current 12 COEs engage approximately 200 colleges and universities to conduct multidisciplinary research in priority DHS mission areas. The COEs align to the S&T Directorate's divisions and their customers. COEs improve understanding of the causes, elements, and consequences of a range of threats from terrorists and natural disasters. They also support countermeasure, mitigation, prevention, and resilience approaches based on both technologies and human behavior. The FY 2011 budget will require adjustments to the current COE structure using COE performance to identify which COEs not to fund.

The COEs work with and through the S&T Directorate's divisions and complement other DHS research and development programs including those of Federal laboratories and federally funded research and development centers (FFRDCs). They take advantage of other relevant Federal agency-sponsored research and provide outcomes useful to Federal, State, and local government, private sector, and international partners. The selection process for the COEs is highly competitive, peer-reviewed, and merit-based.

Primarily funded through research grants and cooperative agreements, the COEs are building expertise and reach-back capabilities in multi-disciplinary topical areas important to homeland security. Presently, these areas are:

- Advanced Data Analysis and Visualization
- Biological Threats and Countermeasures
- Border Security
- Chemical Threats and Countermeasures
- Communications and Interoperability
- Community, Individual and Economic Resilience
- Emergency Preparedness and Response
- Explosives Detection, Mitigation, and Response
- Food and Agriculture Security
- Human Factors Aspects of Technology
- Immigration Studies
- Infrastructure Protection
- Maritime and Port Security
- Natural Disasters and Related Geophysical Studies
- Risk and Decision Sciences
- Social, Behavioral, and Economic Sciences

- Transportation Security

In FY 2009, competitions were completed for the Center of Excellence for Foreign Animal and Zoonotic Diseases at Texas A&M and the National Center for Food Protection and Defense at the University of Minnesota. In FY 2010, the program will award new or continuing grants for the Centers of Excellence for food protection and defense, and agricultural security to run through FY 2015. Also in FY 2010, the program will re-compete and establish a new Center of Excellence for operations research, risk assessment, and economic analysis to run through FY 2016. In FY 2011, this COE plans to extend or replace the existing Center for Risk and Economic Analysis of Terrorism Events (CREATE) at the University of Southern California.

The current Centers of Excellence include:

- Center for Advancing Microbial Risk Assessment (CAMRA), based at Michigan State University, established jointly with the U.S. Environmental Protection Agency ([www.camra.msu.edu](http://www.camra.msu.edu));
- Center of Excellence for Border Security and Immigration, collocated at the University of Arizona at Tucson and the University of Texas at El Paso;
- Center of Excellence for Command, Control, and Interoperability, co-led by Rutgers and Purdue Universities, which focuses on advanced mathematical analysis and visualization studies;
- Center of Excellence for Explosives Detection, Mitigation, and Response, collocated at Northeastern University and the University of Rhode Island;
- Center of Excellence for Food Protection and Defense (NCFPD), based at the University of Minnesota ([www.ncfpd.umn.edu](http://www.ncfpd.umn.edu));
- Center of Excellence for Maritime Island and Extreme/Remote Environmental Security, collocated at the University of Hawaii and Stevens Institute of Technology;
- Center of Excellence for National Center for Foreign Animal and Zoonotic Disease Defense (FAZD), based at Texas A&M University ([www.fazd.tamu.edu](http://www.fazd.tamu.edu));
- National Consortium for the Study of Terrorism and Responses to Terrorism (START), based at the University of Maryland ([www.start.umd.edu](http://www.start.umd.edu));
- Center of Excellence for Natural Disasters, Coastal Infrastructure, and Emergency Management, collocated at the University of North Carolina at Chapel Hill and Jackson State University;
- Center of Excellence for the Study of Preparedness and Catastrophic Event Response (PACER), based at Johns Hopkins University ([www.pacercenter.org](http://www.pacercenter.org)); and
- National Transportation Security Center of Excellence, collocated at the University of Connecticut, Texas Southern University, Tougaloo College, Long Island University, University of Arkansas, Rutgers University, and San Jose State University.

The following section contains specific activities conducted through each of these COEs.

***Center for Advancing Microbial Risk Assessment (CAMRA)*** – Aligns with the S&T Directorate’s Chemical and Biological Division. The S&T Directorate established CAMRA jointly with the U.S. Environmental Protection Agency to fill critical gaps in microbial risk assessments – answering the question, “How clean is safe?” Following the anthrax contamination events, the Federal government recognized the need to develop safe standards for cleanup of biological agents of concern (BACs). CAMRA researchers are developing a scientific basis for standards for BACs in different media – air, water, and on surfaces. In FY 2009 through FY 2010, CAMRA will conduct infectious disease modeling for various agents to assess microbial risks and develop control strategies, and models of the fate and transport of pathogens in the air, drinking water, and on solid surfaces. The period of performance for the CAMRA grant ends September 30, 2011.

***Center of Excellence for Border Security and Immigration*** – Aligns with the S&T Directorate’s Borders and Maritime Security Division. The COE provides fundamental research in support of DHS’ goals of strengthening border security, immigration enforcement, and immigration services. DHS customers and end-users include Customs and Border Protection (CBP), Immigration and Customs Enforcement (ICE), U.S. Citizenship and Immigration Services (CIS), U.S. Coast Guard (USCG), as well as State and local agencies. The COE will conduct scientific and engineering investigations that offer the prospect of high-payoff breakthroughs in detecting people and goods moving across our borders (legally or illegally), as part of a fully integrated, system-of-systems approach. The S&T Directorate expects this COE to provide insight and facilitate breakthroughs that could improve areas including screening and situational awareness along U.S. northern and southern borders. In FY 2009, the COE conducted research in detection (human, vehicles, and decision support), networks (interoperability, reliability, and C2), fusion (tools and approaches), immigration economics and policies, risk assessment (mitigation and alignment), immigrant populations (methods, metrics, and estimates), and governance (law enforcement and international cooperation). In FY 2010, the COE will, based on insights from research successes, develop corresponding educational curriculum materials in topical areas of greatest promise for long-term research and enduring need. In FY 2011, the COE plans to continue developing a curriculum for current, and future, homeland security practitioners’ professional development. The COE will also continue to serve as a systems integrator between border security technologies, border management, and immigration policies to deliver innovative, practical solutions.

***Center of Excellence for Command, Control, and Interoperability (CCI)*** – Launched in March 2009, the CCI COE supports the Command, Control, and Interoperability Division, including research and development in knowledge management, threat assessment, reconnaissance and surveillance, cyber security, as well as communications interoperability and compatibility. This COE focuses on developing new methods, algorithms, and technologies that enable security agencies to efficiently manage and analyze the vast amount of data generated. In FY 2009, the COE provided a set of advanced analytical capabilities using the Global Terrorism Database, produced and hosted by START. In FY 2010, the COE will develop extensive homeland security related science, technology, engineering and mathematics (HS-STEM) curricula and

research programs to train students in advanced CCI-related research and analytical methods; and also develop a strategy for integration of CCI research and analysis with empirical data from other COEs and DHS Components. In FY 2011, the COE plans to expand its network of universities and partner with the international community, identifying complimentary and collaborative roles for each, and expanding its portfolio of multidisciplinary research projects. In addition, the COE will continue developing HS-STEM curricula focusing on interdisciplinary research programs and aligning its ongoing research programs with current CCI Division initiatives.

***Center of Excellence for Explosives Detection, Mitigation, and Response*** – This COE conducts research to enhance the Nation’s ability to prepare for, prevent, mitigate, respond to, and recover from terrorist attacks involving explosives. The COE also develops relevant educational curricula for undergraduates, graduate students, and career professionals, as well as programs to enlighten secondary school teachers about the scientific foundations for homeland security. It also brings teachers and students into laboratories to participate in actual research and enhances their interest in and commitment to homeland security-related professions.

In collaboration with the S&T Directorate’s Explosives Division, this COE provides basic research to advance the technical tools and information that S&T Directorate’s customers will need in the future. DHS customers and end-users include the Chief Medical Officer (CMO), Office of Infrastructure Protection (OIP), Policy Directorate, Transportation and Security Administration (TSA), Immigration and Customs Enforcement (ICE), Office for Bombing Prevention (OBP), and State Homeland Security Agencies.

This COE conducts basic and transformation research in explosive-related areas such as:

- Properties (e.g., chemical, physical, and material) and formulation of explosive materials (including precursors and homemade compounds), as well as materials and/or technologies to mitigate explosives effects (e.g., blast-resistant materials);
- Detection of explosives and explosive devices, including methods to screen people, containers, and other potential conveyances of explosive materials;
- Unconventional approaches (e.g., alternative signatures) to identify indications of threats from explosives or bombers, to include algorithm development for improved detection and/or imaging capabilities and relevant human factors issues;
- New explosive detection tools by focusing on the fundamental sciences to enable more sensitive, selective, and adaptable sensors.
- Material science to improve understanding of the blast response of critical structures. The research outcome is to anticipate and predict failure and to assess the potential for mitigation of failure; and
- Other effective and efficient countermeasures, particularly ones for use in densely populated urban settings and transportation venues.

In FY 2009, the COE conducted workshops to help guide future research directions on novel countermeasure concepts, human factors issues, and improved imaging algorithms. In FY 2010, the COE will develop a multi-factor approach to detection that will improve technology and the ability to prevent casualties and damage to property. Also in FY 2010, the COE will obtain first-generation, scientific properties from available technical tools to characterize and test homemade explosives (HME) and precursor compounds. In FY 2011, the COE plans to identify the fundamental science and enabling technology research barriers to provide protection from explosives-related threats. The COE plans to identify the next-generation detection and mitigation systems. The COE also plans to research the response of materials to anticipate and predict failure and improve failure mitigation.

***The National Center for Food Protection & Disease (NCFPD)*** – Aligns with the Chemical and Biological Division. Its mission is to defend the safety of the post-harvest food system by establishing best practices, developing new tools, and attracting new researchers to manage and respond to food contamination events. NCFPD works in system-wide food security, including:

- Supply-chain management;
- Food processing protection;
- Detection and diagnostics;
- Public health;
- Disposal and decontamination; and
- Economic impact assessment and risk communication.

This work helps the Department mitigate and counter threats to U.S. agriculture and food. In FY 2009, NCFPD extended their analysis of imported food vulnerabilities to the U.S. to consider risks to the global food supply, and exploring potential solutions working with DHS, the U.S. Food and Drug Administration (FDA), and the United States Department of Agriculture (USDA); extended a food transportation model; and further improved the model of food events and multi-State event communication systems. In FY 2010, NCFPD will develop a comprehensive information system for biological threats and countermeasures; extend the food event-modeling framework; work on detection in various food matrices; and broaden research on import vulnerabilities. In FY 2011, NCFPD plans to continue developing the required expertise, infrastructure, and training needed to provide DHS and food sector agencies/owners with comprehensive, internal capabilities in food defense. NCFPD will focus on two general types of efforts: 1) food-related topics (such as specific agent-food interactions) and 2) basic or early-stage research, which, if successful, can move to Divisional support/other stakeholders for further support or development.

***The National Center for Foreign Animal and Zoonotic Disease Defense (FAZD)*** – Aligns with the S&T Directorate's Chemical and Biological Division. FAZD's mission is to protect against the introduction of high-consequence foreign animal and zoonotic diseases in the United States, with an emphasis on prevention, surveillance, intervention, and recovery. These diseases could have staggering economic impacts and threaten human health. FAZD is developing a scientific basis for detecting and preventing exotic

and zoonotic diseases, which assists in the Department's development of countermeasures and effective control strategies. In FY 2009, FAZD worked on the development of vaccines, antiviral agents, and means to increase resistance against threat diseases: Foot and Mouth Disease (FMD), Rift Valley Fever (RVF), Brucellosis, and Avian Influenza (AI). In FY 2010, the COE will 1) complete testing and deliver rapid multi-agent field tests for exotic animal diseases; 2) develop prototype host pathogen genetic markers for field use; create the ability to enhance genetic resistance to classes of exotic disease host-pathogen environmental relationships and molecular genetics; and 3) develop second generation scenario and consequence models and use these to provide analyses for third-generation bio-threat risk assessment. In FY 2011, FAZD plans to 1) develop a suite of distributed epidemiologic, economic, and environmental models and tools that address animal and zoonotic diseases and 2) develop broad based methods for investigation, detection, and protection from select and engineered agents and vaccine candidates for FMD, RVF, and AI.

***Center for Maritime Island and Port Security (formerly Center of Excellence for Maritime, Island & Extreme/Remote Environmental Security)*** – Aligns with the Borders and Maritime Security Division. This COE conducts fundamental research to improve interdiction capabilities, enhance capacity to respond to catastrophic events, particularly for U.S. islands and extreme environments, and develop a more secure and efficient marine transportation system. DHS customers and end-users include the National Protection and Programs Directorate (NPPD), CMO, OIP, Federal Emergency Management Agency (FEMA), USCG, and State Homeland Security Agencies. The COE conducts integrated policy, legal, scientific, and engineering studies in detecting and monitoring people and goods moving through the U.S. maritime domain. It also conducts research to improve the Nation's ability to plan for and respond to natural and terrorist threats in the maritime realm. Finally, it supports long-term mitigation and recovery strategies for catastrophic events, particularly those that affect U.S. islands, territories, and remote areas. DHS also expects this COE to develop meaningful courses of study for students, both graduate and undergraduate, and career professionals involved with these issues. In FY 2009, the COE projects addressed diverse areas including wide-area surveillance techniques and harbor security. In FY 2010, the COE will continue to assess the impact of global policies and procedures, such as vulnerabilities within the global supply chain. In FY 2011, the COE plans to continue research guided by a spiral development approach to solving the complex issues facing the global marine transportation system (MTS) and our coastal communities.

***The National Consortium for the Study of Terrorism and Responses to Terrorism (START)*** – Aligns with the S&T Directorate's Human Factors Division. START provides strategies for intervention against terrorists and terrorist groups, while strengthening the resilience of U.S. citizens to terrorist attacks. The START consortium uses advanced behavioral and social science theories, methods, and data to better understand the origins, dynamics, and impacts of terrorism. Applying this knowledge will provide guidance on how to disrupt terrorist networks, reduce the incidence of terrorism, and enhance the resilience of American society in the face of terrorist threats and natural disasters. Program activities include providing the world's largest open-

source database of terrorist incidents, a Global Terrorism Database (GTD), which enhances our understanding of the occurrences and impacts of terrorism. START will link the GTD to a number of databases that will include data on terrorism using weapons of mass destruction, volatility around the world, and illegal acts committed by extremists in the United States.

In FY 2009, START piloted, revised, and refined a Community Assessment of Resilience Tool, conducting focus groups and interviews among diverse audiences regarding the impact of public communications about terrorist threats. In FY 2010, START will continue its work on: 1) radicalization and terrorist group formation, extending its research to more countries and groups; 2) terrorist group persistence and dynamics, focusing on improving understanding of how terrorist groups operate, the effectiveness of counterterrorism strategies, and conducting an empirical analysis of Improvised Explosive Device (IED) attacks; 3) societal responses to terrorist threats and attacks; 4) Muslim community integration: journey into America; 5) the role for State governments in community resilience; 6) potential populations at risk from U.S. chemical facilities releases; and 7) cross-cutting data collection and analysis, including expansion of the Global Terrorism Database, development of a quantitative index of the public health impacts of terrorism, building community resilience through public involvement, analysis of organizational factors in the successful application of “community engagement”, and identification of principles for bioterrorism preparedness. In FY 2011, START plans to develop and foster new strategic partnerships, as well as allow current researchers to: 1) engage in research on emerging topics that relate to their current research; 2) update the Global Terrorism Database up to the first quarter of 2011; 3) prepare a summary report of the terrorism trends for policy makers; 4) draft/complete articles using GTD for publication. The period of performance for the START grant ends May 30, 2011.

***Center of Excellence for Natural Disasters, Coastal Infrastructure, and Emergency Management*** – Aligns with the S&T Directorate’s Infrastructure and Geophysical Division. This COE conducts research leading to improvements in the Nation’s preparedness and ability to respond to, mitigate against, and recover from natural hazards and disasters. In addition, the COE develops and implements curricula that promote solutions to the challenges of natural disasters in the Nation’s coastal zone. The COE will also use this curriculum to educate and train the next generation of scholars and practitioners to address natural hazards. DHS anticipates that this COE’s discoveries will save lives, reduce property damage, and enhance the social and economic resilience of communities’ vulnerable natural hazards. This COE conducts basic and transformational research in coastal-hazards modeling, engineering to enhance the resilience of infrastructure and the natural environment, disaster response and social resilience, as well as planning for resilience. In FY 2009, the COE developed and tested improved computer models of atmosphere-water-land interactions during hurricanes that generate predictions of storm-surge size and location. The COE also completed an evaluation of State hazard-mitigation plans and developed policy recommendations to help improve hazard-mitigation plan and execution quality. In FY 2010, the COE will launch new graduate and undergraduate curricula in multiple programs including Engineering, Public Safety Management, Applied Science, and Environmental Health. In FY 2011, the COE

plans to develop a decision support tool that infrastructure managers and emergency management officials can use to minimize disruptions across multiple Critical Civil Infrastructure components due to natural hazards.

***The Center for Risk & Economic Analysis of Terrorism Events (CREATE)*** – Cuts across all six S&T Directorate divisions' missions, and coordinates activities with the S&T Directorate's Operations Analysis Office, the Risk Sciences Branch, and the Homeland Security Systems Engineering and Development Institute (SEDI™). CREATE evaluates the risks, costs and consequences of terrorism, and identifies economically efficient investments in countermeasures to improve security and resilience. Research in these areas can contribute significantly to the Department's ability to identify and select cost-effective options for enhancing national security and minimizing human and economic casualties in the face of a range of hazards, as well as improve DHS' ability to predict terrorist threats. In FY 2009, CREATE integrated risk and economic models into an overall risk-management model that provides support for decisions to invest in countermeasures and allocate homeland security resources. Also in FY 2009, CREATE extended the terrorism risk-assessment framework to incorporate novel experimental approaches and new sources of data. In FY 2010, the COE will extend decision analysis to include dynamic interactions between attackers and defenders; develop specific projects in collaboration with each of the S&T Directorate divisions and the corresponding DHS operational units; develop capabilities for including intelligence data and analysis into decision support tools; extend applications of game theory to homeland security to include dynamic, multi-stage and stochastic games; and develop experimental games to test alternative theories and models of defender-attacker interactions. Also in FY 2010, CREATE will add partners with extensive capabilities in financial risk and economics as well as counter-terrorism operators. The synergies with CREATE's existing capabilities, as well as those of the START COE will create a powerful alliance to predict and counter terrorist attacks. The period of performance for the CREATE grant ends May 30, 2010.

***The National Center for the Study of Preparedness and Catastrophic Event Response (PACER)*** – Aligns with the S&T Directorate's Infrastructure and Geophysical Division and Chemical and Biological Division. PACER focuses on optimizing our Nation's preparedness in the event of a high-consequence natural or man-made disaster and develops guidelines to alleviate the effects of such an event. In upcoming years, PACER will focus more closely on medical and public health issues related to preparedness and response with an emphasis on surge capacity. PACER is investigating issues relevant to the theory and practice of emergency preparedness and response, including critical decision-making, regional integration, and resilience of medical response networks, surge capacity, health systems integration, detection and biosurveillance, and public health preparedness. DHS customers and end-users include Office of Health Affairs (OHA), the FEMA, OIP and hospitals, health departments, and emergency responders. In FY 2009, PACER identified decision-making approaches and decision support technologies that would improve catastrophic event response. In FY 2010, PACER will develop Model Memoranda of Understanding (MOUs) for shared resources and services between health care facilities applicable to all acute care hospitals in the United States. In FY 2011, the

COE plans to estimate actual surge capacity in acute care medical facilities throughout the U.S. for sudden-impact catastrophic events.

***The National Transportation Security Center of Excellence (NTSCOE)*** – Cuts across all six S&T Directorate Divisions and DHS component organizations, but is particularly responsive to the needs of TSA, OIP, FEMA, certain U.S. Coast Guard activities at ports, and these agencies' partners. This COE is initiating collaboration with the Transportation Security Laboratory and the Maritime COE. It addresses the technology and research needs associated with securing the Nation's surface transportation infrastructure and protecting the people who use it. In FY 2009, the COE developed preliminary research, education, and training programs to teach students and transportation professionals in advanced science, technology, management, policy, and behavioral techniques related to transportation security. In FY 2010, the COE will extend and further implement the results of the research, education, and training projects to support the evolving needs of DHS and its partners and will develop a NTSCOE Strategic Plan to ensure the COE's long-term alignment to address surface transportation security challenges from an all-hazards approach. In FY 2011, the COE plans to integrate its research, education, and training programs and begin transitioning collaborative COE efforts to support customers in the S&T Directorate, other DHS components, and elsewhere within the Federal government, using the NTSCOE Strategic Plan as a guide for future efforts. The COE's work will address the full range of hazards to the Nation's surface transportation infrastructure, including terrorist attack, natural disaster, pandemic disease, and vulnerabilities unique to the transportation of hazardous petrochemicals.

**Education Thrust Area** – FY 2010: \$5.948 million; FY 2011 estimate: \$5.217 million. This program invests in high-performing science and engineering students or professionals in the United States to develop the next generation of homeland security science and technology leaders. This thrust funds students, scholars, and faculty drawn from postsecondary, graduate, and professional levels of science and engineering disciplines. Activities in this thrust area include DHS Scholarships and Fellowships, HS-STEM Career Development Grants, American Association for the Advancement of Science (AAAS) Fellowships, and partnerships with the National Defense University to provide advanced science and technology education to DHS Federal employees.

***Scholarships and Fellowships*** – University Programs has two distinct programs that provide scholarships for undergraduates and fellowships for graduate students pursuing HS-STEM degrees: the DHS Scholars and Fellows program and the Career Development Grants program. These two competitive programs provide educational support, internship, and employment opportunities to qualified individuals to enhance the scientific leadership in areas important to DHS. DHS requires supported students to serve one 10-week summer internship and one year in an approved HS-STEM venue. Student and scholar researchers perform work at more than 28 DHS-affiliated venues including the S&T Directorate, national laboratories, and DHS components such as USCG and the Office of Intelligence and Analysis (I&A).

The DHS Scholars and Fellows program competitively awards scholarships and fellowships to individual science, mathematics, and engineering undergraduate and graduate students.

The DHS S&T Directorate's Career Development grants program provides competitive awards to support undergraduate and graduate students attending institutions, including the COEs, which have made a commitment to develop HS-STEM curricula and fields of study.

**Minority Serving Institutions (MSIs) Thrust Area** – FY 2010: \$3.773 million; FY 2011 estimate: \$3.366 million. This program improves the capabilities of MSIs to conduct research, education, and training in areas critical to homeland security and to develop a new generation of scientists capable of advancing homeland security goals. In FY 2009, the program expanded its focus to HS-STEM workforce development at DHS, State and local agencies, national laboratories and COEs. In FY 2010, the program will refine successful programs, develop more internships, and identify more career opportunities in areas of importance to DHS. In FY 2011, this project plans to fund scholarships, fellowships, and internships that will help develop a new generation of homeland security experts.

<b>Total Request</b>	-	-	<b>31,986</b>	-	-	<b>44,181</b>	-	-	<b>39,936</b>

### Description of Item

The decrease in FY 2011 will eliminate funding for R&D in the Borders and Maritime Security Division (BMD) due to the funding of higher priority efforts within the Department. The division has successfully delivered important interim capabilities to its customers in recent years, and continues to make significant progress toward scientific, phased delivery of complete solutions for securing U.S. borders, including ports-of-entry and vast stretches of remote terrain and waterways – with the ultimate goal of stopping threats before they enter the United States.

### Justification

BMD's R&D develops and transitions tools and technologies that have a significant impact on the security of our nation's borders and waterways, without impeding the flow of commerce and travelers. BMD's research directly reduces the threat of terrorist entry into the United States and counters illegal immigration, organized crime, and illegal activities by improving the security and integrity of the nation's maritime and terrestrial borders.

The proposed reductions will reduce funding for the Border Watch Thrust Area. Border Watch develops a network of advanced sensor and communication technologies that provide law enforcement officers critical information about illegal activities along the U.S. border. Cargo Security reduces the risk of terrorists manipulating cargo conveying across various transit modes in the international supply chain.

The FY 2011 program decrease will eliminate the following project and effort:

- Maritime Security Technology Pilot Project
- Low-Flying Targets Emerging Threat Effort

**Detailed information on terminated project and effort:**

*Maritime Security Technology Pilot Project* – Provides a maritime environment for the development, testing, and evaluation of new sensors and surveillance technologies. This project is a risk reduction tool that manages a controlled, operational testbed in settings representative of DHS operational environments. The elimination of this project impairs the S&T Directorate's ability to show how future technology could support Department of Homeland Security operations and how concept of operations (CONOPS) may change based on new technology.

*Low-Flying Targets Emerging Threat Effort* – Assesses emerging threat of low-flying aircraft smuggling contraband across the U.S. border, a growing concern expressed by CBP. Aligned with the Sensors/Data Fusion and Decision-Aids Project, the effort addresses a fundamental basic research need to evaluate existing capabilities and identify a path forward for addressing the detection, identification, and tracking of these targets.

The reduction in funds affects the Division’s ability to address the following capability gaps identified by DHS operating components:

- Development, testing, and evaluation of technologies that facilitate real-time detection, tracking, identification, and classification of land, marine, and air targets and assets along the terrestrial and maritime borders.
- Surveillance (detect, track, classify, identify) of all threats along the terrestrial and maritime borders to detect illegal border crossings.
- Surveillance and monitoring of uncooperative aircraft

The Borders and Maritime Security Division will continue to work closely with its operational customers to identify and generate the technologies that can secure air, land, and maritime borders, including U.S. ports-of-entry and inland waterways.

<u>Terminated Project and Effort</u>	<u>Affected Customers</u>
Maritime Security Technology Pilot Project	Customs and Border Protection (CBP)
Low-Flying Targets Emerging Threat Effort	Immigration and Customs Enforcement (ICE), CBP

(Dollars in Thousands)

**Program Decrease 2:** Chemical and Biological  
PPA: Research and Technology  
Program Decrease: Positions 0.0, FTE 0.0, Dollars \$-7,188.0

Funding Profile

	FY 2009 Actual			FY 2010 Enacted			FY 2011 President's Budget		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	208,051
Program Decrease							-	-	(7,188)
<b>Total Request</b>	-	-	<b>167,109</b>	-	-	<b>206,800</b>	-	-	<b>200,863</b>

Description of Item

The decrease in the budget request for FY 2011 will reduce funding for existing research and development (R&D) efforts through the Chemical and Biological Division due to the funding of higher priority items within DHS.

Justification

The FY 2011 program decrease impacts the following projects:

The projects below fall within the Surveillance and Detection program, which develops next-generation detectors for biological threat agents, including fully autonomous detection capabilities for the next generation, BioWatch systems.

- *National Bio-Surveillance Integration System (NBIS)* - Reduces S&T Directorate support of NBIS due to the funding of higher priority initiatives. The S&T Directorate supports the Office of Health Affairs' operation of NBIS by providing subject matter expertise and developing modeling tools. NBIS provides decision makers early identification of biological events of national significance, such as disease outbreaks, the potential use of biological agents, and emerging biohazards. The S&T Directorate will no longer provide this support.
- *Next-Gen Bio Detection* – Delays the development of technologies and systems to detect enhanced, emerging, and advanced biological threats due to the funding of higher priority initiatives. This decrease delays the development of a system to accurately detect the presence of a traditional bioterror agent, provide characterization of that pathogen for its virulence,

determine if the agent has been enhanced to defeat medical countermeasures, provide rough quantification of the amount of that agent, and preserve samples for further analysis.

This project below falls within the Analysis program, which develops a robust and enduring analytical capability to support chemical countermeasures development.

- *Economic Supply Chain Analysis* - The funding of higher priority items necessitates the termination of this effort to understand the economic vulnerability of chemical sector to natural/man-made disasters. This will reduce the capability to analyze the chemical sector and other infrastructure component interactions in support of chemical asset prioritization, consequence assessment, and policy development. The S&T Directorate will not be able to provide analysis and reports on organic and inorganic pharmaceuticals and agricultural supply chains and reports on completion of capability, documenting findings, and resiliency of supply chains. The program will not complete annual peer and industry reviews to assess project capabilities.

**Department of Homeland Security**  
**Science & Technology**  
**Research, Development, Acquisitions, and Operations**  
**Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 3:** Command, Control, and Interoperability  
PPA: Research and Technology  
Program Decrease: Positions 0.0, FTE 0.0, Dollars \$-7,414.0

Funding Profile

	FY 2009 Actual			FY 2010 Enacted			FY 2011 President's Budget		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	82,246
Program Decrease							-	-	(7,414)
<b>Total Request</b>	-	-	<b>73,830</b>	-	-	<b>81,764</b>	-	-	<b>74,832</b>

Justification

A reprioritization of FY 2011 funding towards higher priority initiatives will eliminate or delay the following projects in CCI:

- Cyber Insider Threats;
- Integrated Data Processing and Analysis;
- Sensor Web;
- Traditional Forensics (formerly Laboratory Forensics); and
- Special Programs, Comparative Studies

**Cyber Insider Threats** – Conducts research that protects the Government, private sector and critical infrastructure, where agencies/departments/corporations/institutions maintain valuable and highly sensitive proprietary information, and where banking institutions manage the flow of and access to electronic funds. Illegal access to these systems by malicious insiders can cause grave national security and monetary damage.

**Integrated Data Processing and Analysis** – Limits the scope of regional information sharing and collaboration pilots that the project plans to conduct with law enforcement agencies in the Mid-Atlantic and Pacific Northwest regions. Delays planned pilot follow-on activities from FY 2011 until FY 2012.

**Sensor Web** – Eliminates activities to develop and demonstrate intelligent sensor webs for use in law enforcement applications and emergency response situations. Delays follow-on demonstrations and commercialization efforts planned for FY 2011 until FY 2012.

**Traditional Forensics (formerly Laboratory Forensics)** – Eliminates efforts to improve current forensic methods or develop new ones that the legal system accepts to examine evidence. This project provides technology solutions for data visualization challenges, identity-questioned document examination, forensic audio/visual analysis, forensic chemistry, and efforts that seek to reduce forensic examination error rates.

**CCI Special Programs, Comparative Studies** – Eliminates research and analytic studies (e.g., historical, competitive strategies, net assessment, etc.) to examine the past and future evolution of the terrorist versus security force competition over time.

**Department of Homeland Security**  
**Science & Technology**  
**Research, Development, Acquisitions, and Operations**  
**Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 4:** Human Factors  
PPA: Research and Technology  
Program Decrease: Positions 0.0, FTE 0.0, Dollars \$-2,746.0

Funding Profile

	FY 2009 Actual			FY 2010 Enacted			FY 2011 President's Budget		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	16,181
Program Decrease							-	-	(2,746)
<b>Total Request</b>	-	-	<b>11,324</b>	-	-	<b>16,087</b>	-	-	<b>13,435</b>

Description of Item

The decrease in FY 2011 reflects reductions in Human Factors' efforts in the Community Preparedness and Resilience Program, Motivation and Intent Program, and the Suspicious Behavior Program due to the funding of higher priority initiatives within the department.

Justification

The reduction in FY 2011 impacts the following Human Factors efforts as detailed below.

Ends the Resilient Social Networks Project:

A reallocation of resources results in the elimination of research efforts that use social network analysis to strengthen the connections between public and private sector entities and to improve collaboration, planning, response, and recovery activities in the face of a natural or terrorist disaster.

Reduces Quantitative Psychosocial Impacts Index project

The funding reduction reduces efforts to develop a quantitative index to assess the psychological, social, and economic impacts of catastrophic events that will factor into risk assessments, measure community recovery, and prioritize preparedness, response, and recovery activities. The reduction in FY 2011 will delay research to identify economic and mental health indicators related to social disruption.

Reduces Violent Intent Modeling and Simulation project

The Violent Intent Modeling and Simulation (Basic Research) project develops tools to assist analysts in determining whether radical groups are likely to engage in political violence. This reduction will delay by 10 months the delivery of an analytic framework

and modeling system based upon empirically validated social and behavioral science theories. This will also delay the ability of analysts to assemble and test competing scenarios, a capability which would increase their confidence in estimates of potential group violence. This research will assist Intelligence and Analysis (I&A) and State and local law enforcement.

Reduces Validation of Screening Passengers by Observation Techniques (SPOT) project

The funding reduction delays the Validation of Screening Passengers by Observation Techniques (SPOT) project's transition of indicators used to identify and interdict threats before they enter the United States, at mass transit portals, critical infrastructures, and special events.

Reduces Insider Threat project

A multi-year effort to develop an integrated, layered approach to insider threats specific to the DHS problem set would be delayed due to the reprioritization of funds towards higher priority initiatives in FY 2011. FY 2010 focuses upon a development and assessment of a specific aspect of public safety concern (information technology sabotage) that will form a test case for expanding the model to other aspects unique to DHS personnel and accompanying physical security measures. A decrease in FY 2011 will necessitate the delay of operational testing of the empirical framework. Further, expansion of the model would be limited.

The funding reduction in FY 2011 will negatively impact the Human Factors/Behavioral Sciences Division. The funding reduction will eliminate research and analysis to identify and strengthen social networks across public and private sector entities in local communities to improve collaboration, planning, response, and recovery. The decrease in FY 2011 will also delay research to identify economic and mental health indicators related to social disruption; development and testing of competing violent intent scenarios; transition of optimized behavioral indicators and weights to DHS operational screening commands, including the TSA SPOT program; and delay testing of an insider threat empirical framework.

(Dollars in Thousands)

**Program Decrease 5:** Infrastructure and Geophysical  
PPA: Research and Technology  
Program Decrease: Positions 0.0, FTE 0.0, Dollars \$-39,106.0

Funding Profile

	FY 2009 Actual			FY 2010 Enacted			FY 2011 President's Budget		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	75,228
Program Decrease							-	-	(39,106)
<b>Total Request</b>	-	-	<b>65,448</b>	-	-	<b>74,958</b>	-	-	<b>36,122</b>

Description of Item

The decrease in the request for FY 2011 due to a reprioritization of funding within the department will impact existing research and development (R&D) efforts that the Infrastructure and Geophysical Division (IGD) is conducting.

The Infrastructure and Geophysical Division conducts R&D on the 18 Critical Infrastructure/Key Resource (CIKR) sectors identified in the National Infrastructure Protection Plan (NIPP). This meets the requirements set forth in the Homeland Security Presidential Directive (HSPD)-7, Critical Infrastructure Identification, Prioritization, and Protection

The proposed reduction will reduce funding for the following projects in the Preparedness and Response Thrust Area.

The following projects support the Incident Management Enterprise Program, which develops advanced, scalable, interoperable, and non-proprietary incident information-management, decision-making, and training tools for emergency responders and incident commanders to use during everyday episodes for events of national significance that increasingly demand more highly coordinated responses.

- *Incident Logistics and Resource Tracking System Project* – Provides a comprehensive and transparent disaster logistics tracking system across the entire area of responsibility of all disaster response, for both public and private partners. The project is planning to develop and test the first functional incident logistics system. However, the reduction in FY 2011 will delay transition of the tool to FEMA.

- *Overhead Imagery Data Project* – Develops advanced Geographic Information Science to support the application of remote sensing, image processing, geographic information systems, digital cartography, and spatial modeling for disaster management and hazards research. The project is planning to collect and evaluate requests for information to integrate overhead imagery data from a variety of collection platforms and sensors into incident management geospatial systems to improve and accelerate disaster impact analysis on facilities, dwellings, and critical infrastructure. The project is working towards deployment of a geospatial management system that would integrate overhead imagery data from a variety of collection platforms and sensors into existing Federal, State, tribal, and local systems. This effort would improve and accelerate disaster impact analysis on facilities, dwellings, and critical infrastructure. However, the reduction in FY 2011 will delay this work, postponing the transition of technology to customers.
- *Wild Fire Detection and Prediction Project* – Develops tools to detect, locate, and then predict the magnitude of wild fires to help prevent wildland-urban interface (WUI) fire disasters. This project is planning to prototype, deploy, and integrate improved techniques for early detection of wild fires in remote locations and predict magnitude and direction of wild fires into existing wild fire incident management systems, per customer requirements. The project is working towards exploration and potentially development of improved techniques for rapid-fire suppression in both wild fire and urban fire settings. However, the reduction in FY 2011 will delay this work, postponing the transition of technology to customers.
- *P&R Advanced Requirements Development and Studies* – Engages emergency response communities at the Federal, State, and local levels to assess the state-of-the-art and establish requirements for the development of advanced technologies within the Incident Management Enterprise Program. The project had planned to perform technology surveys on state-of-the-art in preparedness and response technologies to identify capability gaps and establish requirements for the customer. However, the proposed reduction eliminates this effort due to the funding of higher priority initiatives within FY 2011.

The proposed funding reduction will also significantly reduce the Geospatial Analysis Program, which is planning to develop the tools to predict seismic activity using data acquired from satellites, unmanned and manned aerial sensor platforms in response to customer requirements. For example, a new technique called radar interferometry (InSAR) has the potential to produce detailed maps of the warping of the Earth's surface during the earthquake cycle. This technique makes it possible to obtain data with a spatial resolution of a few tens of meters and to a precision of a few millimeters, which would enable First Responders and incident managers to accurately predict seismic activity and take preventative measures. The program includes the following projects.

- *Seismic Activity Detection Data Collection and Analysis* – Develops the data sources to support design and development of models that provide earlier prediction of seismic activity than is currently available from ground-based seismic monitoring systems. This project is planning to improve public alert and warning of seismic activity by developing and prototyping geospatial analysis models and tools with the ability to exploit overhead sensor data to provide early warning of seismic activity. The project is working towards integrating these tools into existing early warning systems. However, the reduction in FY 2011 will delay this research, postponing the transition of technology to customers.
- *Seismic Alert and Warning* – Integrates the modeling predictive capabilities with emergency management alert and warning systems, planning capabilities, and training and exercise programs. The project is planning to develop and prototype seismic warning models and tools with selected local, State, and Federal agencies to provide early warning data for exercises and drills. The project is working towards integrating these models into existing early warning systems to improve public alert and warning of seismic activity.

The reduction in funding also affects the Infrastructure Protection IPT in the following areas:

The proposed reduction will impact the following projects in the Critical Infrastructure Protection Thrust Area, which conducts R&D activities on the 18 CIKR sectors identified in the National Infrastructure Protection Plan (NIPP).

- *CIP Advanced Requirements Development and Studies* – Engages infrastructure Sector Specific Agencies (SSA) in the Office of Infrastructure Protection (IP), regional consortiums and owners and operators to assess the current state-of-the-art and establish requirements for the development of advanced technologies within the Infrastructure Protection Advanced Surveillance and Detection Systems Program. This project supports the Advanced Surveillance Detection Systems Program, which conducts R&D on the surveillance of the 18 CIKR sectors identified in the NIPP and HSPD-7 and seeks to address the IP requirements by automating and increasing the fidelity of tasks currently performed by operators. The project develops technology to detect subtle changes against a background environment, and incorporates advanced sensors including optical, infrared, ultraviolet, and acoustic.
- The project was planning to perform technology surveys on state-of-the-art in critical infrastructure protection technologies; however, a reprioritization of resources necessitates the end of this project.
- *Blast/Projectile - Advanced Materials Design Project* – Conducts basic research in conjunction with existing Federal investments in nanotechnology and other materials science efforts to develop extremely strong, lightweight, resilient materials. This project supports the Protective Technologies program, which

conducts research on sector-specific and region-specific needs, identified by IP, or requested from critical infrastructure sectors and Sector Specific Agencies (SSAs), as designated by HSPD-7. However, the reduction in FY 2011 will significantly delay this work.

The Infrastructure and Geophysical Division works to improve our critical infrastructure by providing technologies for hardening and rapid response and recovery for critical infrastructure assets. The decreases to Preparedness and Response and Infrastructure Protection will impact the Infrastructure Protection and Preparation and Response IPTs but the division will continue to work with customers to develop and deliver technologies that help DHS to meet its mission goals.

Description of Item

The FY 2011 decrease of \$216,000 in Innovation affects new starts in the areas of passive screening detection and explosives.

Justification

Innovation focuses on homeland security research and development (R&D) that could lead to significant technology breakthroughs that would greatly enhance DHS operations. In FY 2011, the decrease of \$216,000 reduces the funding available to new starts:

***Passive Methods for Precision Behavioral Screening***—Builds on the Future Attribute program to transform the screening process from active (FAST) Screening Technologies to passive detection so that the screening process does not require direct interaction. This project will develop technologies that will .between the operator and the subject ,intrusive-and throughput through non ,automation ,enable increased standoff s'undetectable technologies that screen for behavioral and psychological cues of a person. Passive detection will enable the .ntent to commit a harmful act at safe standoff rangesi interpretation of physiological and behavioral cues or signatures that the body naturally does not and ;accurate validation of associated documentation/support rapid ;produces ,radio frequency energy ,scans ,agents asking questions) induced stress-require operator .(.etc

***Operationally Deployable Explosives Mitigation***—Develops new approaches and from an (.etc ,ingsball bear ,tacks ,nails) technologies to mitigate the shrapnel damage. The novel concept is to mitigate the effects of .including suicide bombers ,explosive explosives by forcing the shrapnel into the ground to minimize damage to surrounding ,people and infrastructure

Innovation provides only high-level details because the very concept of innovation is to address known problems with emerging solutions. Specific information is not available and others propose solutions in response ,laboratories ,universities ,until private entities such high payoff solutions give DHS a ,However .ementsto Broad Agency Announc .accidental disasters to fulfill its mission/clear advantage against the enemy or natural

Description of Item

The FY 2011 program change reflects a program change increase of \$11.146 million for infrastructure upgrades at Transportation Security Laboratory (TSL) and operating and maintaining DHS laboratories.

Justification

In FY 2011, the Transportation Security Laboratory (TSL) will continue the upgrade program began in FY 2010. A budget for upgrades ensures that DHS S&T laboratories do not reach a point where dilapidated infrastructure or the lack of sufficient infrastructure prohibits conducting needed research and development. Capital upgrades are not routine operations and maintenance or expected upkeep but include remodeling, rebuilding, and outfitting space to allow scientists to pursue new capabilities based on customer requirements; and major overhauls of systems (electrical, water/sewage system) to ensure operability, safety, and security. An Infrastructure Upgrades budget prevents an unmanageable and unaffordable situation where key facilities require upgrades simultaneously.

At TSL, where current facilities are insufficient to support its changing mission, infrastructure upgrades address space issues and allow TSL to extend its focus beyond aviation to mass transportation. This change supports DHS Secretary Napolitano's Goal, "Transportation Security – While the Department has dramatically increased security in the aviation domain, we must also ensure we properly mitigate risks across the surface transportation domain." In FY 2010, the Office of National Laboratories (ONL) will construct explosive storage bunkers so that TSL can continue to support increasing system development testing requirements. The bunkers will eliminate the need to rent

storage space off-site and position TSL for anticipated growth in detection systems' validation.

In addition to explosives storage space, capital investment plans at TSL include the following: constructing a new independent testing and evaluation (IT&E) laboratory; renovating and expanding the developmental, test, and evaluation (DT&E) laboratory space; and providing additional office and non-explosive storage space. These upgrades support TSL's current needs and the laboratory's efforts to expand expertise in mass transportation. Currently, the laboratory operates second and third shifts and must rotate equipment among various laboratory cells to conduct testing. Any disruptions in these activities adversely affect testing schedules and technology development for DHS customers. In FY 2011, ONL plans to complete design for TSL upgrades, begin renovating space to increase DT&E space, and begin constructing general-purpose laboratory and administrative space to support the IT&E and DT&E missions.

In FY 2011, the S&T Directorate request does not include funds for the National Bio and Agro-defense Facility (NBAF). Instead, the S&T Directorate will request a reprogramming of prior year funds. In FY 2011, the S&T Directorate plans to build the Central Utility Plant (CUP) with the reprogrammed funds in conjunction with matching funds from the State of Kansas. In the current fiscal year, FY 2010, the S&T Directorate will fund design and site-specific risk assessment studies, and cost-share funds from the State of Kansas will support site preparation (e.g., earthwork, roadways, parking, fencing, and utility distribution).

The requested FY 2011 funding will enable the Division to operate and maintain DHS laboratories to support its DHS customers. Construction and operations of laboratories enable innovative research that will ensure the preparedness of the Nation against a variety of chemical, biological, agricultural, and other attacks.

PPA: Research and Technology  
Program Decrease: Positions 0.0, FTE 0.0, Dollars \$-5,996.0

Funding Profile

	FY 2009 Actual			FY 2010 Enacted			FY 2011 President's Budget		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	29,170
Program Decrease							-	-	(5,996)
<b>Total Request</b>	-	-	<b>27,332</b>	-	-	<b>29,000</b>	-	-	<b>23,174</b>

Description of Item

The decrease in FY 2011 will reduce the following programs in the Test and Evaluation (T&E) and Standards Division:

**Standards Development** – A reprioritization of funding towards higher priority initiatives results in reduced funding for S&T standards efforts, including the following:

- Personal Protective Equipment standards increase safety in life-threatening situations. Examples include respiratory protection equipment and Chemical, Biological, Radiological, and Nuclear (CBRN) protection ensembles.
- Chemical decontamination standards allow responders to more effectively decontaminate themselves and civilians in the event of a chemical attack or accident.
- Human and machine interface standards provide responder equipment and computer systems with clear and understandable displays and user-friendly interfaces and configurations (e.g., handles, switches, size/weight/shape, etc.)

Additionally, the reduction in funds eliminates the following projects:

- Cargo screening and sensor standards for border security equipment.
- Blast-resistant trash receptacle deployment guide development. The Standards program will complete receptacle performance standards but will not develop the guide which provides details on deployment aspects such as where (not) to deploy the trash receptacles.

- Universal access control and credentialing to support transportation worker identification. The Standards program has been developing standards for access control devices and computer systems.

**T&E Test Area/Capabilities Program** – Reduction will result in less support for DHS Acquisition program reviews. The T&E Test Area/Capabilities program works directly with DHS acquisition programs to assist in the development and execution of a robust T&E program that will lead to the evaluation of the program’s effectiveness and suitability. Reductions impact the program’s goal to implement a uniform and centrally managed Departmental test and evaluation process into the entire development and acquisition lifecycle

In FY 2009, the program expanded its oversight function to all DHS Level 1 and non-delegated programs and wrote an independent assessment report of the program’s Operational T&E. The program also developed a DHS Modeling and Simulation (M&S) T&E policy. In FY 2010, the program will continue its oversight function as well as expand to include new Level 1 and non-delegated programs, implement the M&S T&E policy, and establish a DHS model verification, validation, and accreditation process. In FY 2011, the program plans to provide T&E oversight of all Level 1 and non-delegated acquisition programs and maintain Modeling and Simulation T&E Policy. Reduced funding affects the scope, including the number of programs reviewed, of this effort.

\*Includes funds executed by the Homeland Security Institute PPA in FY 2009

Description of Item

The decrease in FY 2011 impacts Transition's efforts in First Responder Technologies and TechSHARE.

Justification

Transition contributes to achieving the Long-Term Fiscal Years Homeland Security Program (FYHSP) Performance Goal to deliver near-term products and technology enhancements through science and technology. The FY 2011 reduction impacts the following Transition programs.

*First Responder Technologies*

In FY 2009, the S&T Directorate initiated the First Responder Integrated Product Team (IPT) and integrated it into the current product transition program. The S&T Directorate established this IPT in response to Congressional feedback to establish a fair and equitable process for the First Responder community to provide input to the S&T Directorate on their representative technology needs. The Secretary endorsed this approach. Federal, State, local, and tribal First Responders will identify science and technology requirements and prioritize technology solutions proposed by the S&T Directorate's divisions for development or enhancement. In FY 2010, the S&T Directorate divisions plan to start these new First Responder initiatives. The program's decreased budget in FY 2011 will reduce the S&T Directorate's efforts to support field-testing of First Responder prototype technologies.

*TechSHARE - TechSolutions*

The TechSolutions project fields prototypical solutions within 12 months; establishes a cost that is commensurate with the proposal (one million or less per project); and develops a solution that meets 80 percent or more of the identified requirement. First Responders are able to submit gaps to the program through the website, [www.TechSolutions.dhs.gov](http://www.TechSolutions.dhs.gov).

This reduction delays TechSolutions' ability to develop technologies such as:

- Next-generation self-contained breathing apparatus which decreases the size and weight of the cylinder firefighters breath air from thus reducing fatigue and improving agility;
- FireGround Compass which provides firefighters with orientation when they become disoriented in a smoke filled building; and
- Stand Off Patient Triage Device, which allows emergency medical personnel to obtain life saving vital sign readings from victims of a mass casualty event.

TechSolutions plans to initiate similar technology development efforts in FY 2011 and beyond. A decrease in TechSolutions' budget will delay the project's ability to develop and transition technologies similar to these in the future. Some of the efforts planned include:

- See-through-wall technology capable of providing firefighters and law enforcement officials with situational awareness information that can lead to the location of trapped victims in a burning structure or prevent law officers from walking in on an armed ambush;
- Ground-Penetrating Radar technology capable of locating victims of earthquake or mine shaft collapses; and
- Voice-Amplification technology that allows First Responders who are fully donned in personal protective equipment to safely communicate with victims.

Description of Item

The FY 2011 funding decrease will eliminate one or more Centers of Excellence (COEs), Minority Serving Institutions (MSIs), and approximately \$600,000 from Education’s Scholarship and Fellowship program within University Programs.

Justification

University Programs aims to build scientific leadership and core competencies in multi-disciplinary areas by investing in three thrust areas: a coordinated, university-based system of Centers of Excellence (COEs); Educational Programs; and Minority Serving Institutions. Integration of these three thrust areas ensures that DHS gets the maximum return on its investment in university research and education.

University Programs supports basic research and the education of promising students in homeland security-related Science, Technology, Engineering, and Mathematics (HS-STEM) fields. The Homeland Security Act of 2002 directs the S&T Directorate to “establish a coordinated, university-based system to enhance the Nation's homeland security”. Implicit in this directive is the need for DHS to support both university-based research and a well-considered approach to training and placing future Homeland Security scientists, engineers, and practitioners for/in HS-STEM fields. Universities provide adaptable homeland security research capacity to address critical homeland security research needs in both the near- and long-term.

University Programs’ mission is to maximize the Department’s return on investment in university-based research and education to achieve the goals set by Congress as efficiently as possible. Because the program supports research, education, and technology development in HS-STEM fields, it is building the Nation’s intellectual capital in these

areas. University Programs is one of the only Federal entities assuming this role with respect to domestic security-related studies. The Congress enacted legislation (America COMPETES Act) to increase investment in long-term basic research and increase support for students in relevant fields as critical to preserving the U.S.'s strategic and economic security.

## **V. Exhibits and Other Supporting Materials**

### **A. Justification of Proposed Legislative Language**

For necessary expenses for science and technology research, including advanced research projects; development; test and evaluation; acquisition; and operations; as authorized by title III of the Homeland Security Act of 2002 (6 U.S.C. 181 et seq.); [\$863,271,000] **and the purchase or lease of not to exceed five vehicles, \$866,305,000**, of which [\$713,083,000] **\$744,305,000**, to remain available until September 30, [2012] 2013; and of which [\$150,188,000] **\$122,000,000**, to remain available until September 30, [2014] 2015, solely for Laboratory Facilities[: Provided, That not less than \$20,865,000 shall be available for the Southeast Region Research Initiative at the Oak Ridge National Laboratory: Provided further, That not less than \$3,000,000 shall be available for Distributed Environment for Critical Infrastructure Decision making Exercises: Provided further, That not less than \$12,000,000 shall be for construction expenses of the Pacific Northwest National Laboratory: Provided further, That not less than \$2,000,000 shall be for the Cincinnati Urban Area partnership established through the Regional Technology Integration Initiative: Provided further, That not less than \$10,000,000 shall be available for the National Institute for Hometown Security, Kentucky: Provided further, That not less than \$2,000,000 shall be available for the Naval Postgraduate School: Provided further, That not less than \$1,000,000 shall be available to continue a homeland security research, development, and manufacturing pilot project: Provided further, That not less than \$500,000 shall be available for a demonstration project to develop situational awareness and decision support capabilities through remote sensing technologies: Provided further, That not less than \$4,000,000 shall be available for a pilot program to develop a replicable port security system that would improve maritime domain awareness: Provided further, That \$32,000,000 shall be for the National Bio- and Agro-defense Facility, of which up to \$2,000,000 may be obligated for the National Academy of Sciences to complete the Letter Report required in section 560(b) of this Act].

**SCIENCE & TECHNOLOGY DIRECTORATE  
NATIONAL BIO AND AGRO DEFENSE FACILITY (NBAF)**

INITIATIVE NAME	FY 2011 FUNDING REQUEST (\$000)			FUNDING FROM:	
	Current Services Level	New Initiative	Total	Budget Activity	Program/s Name
National Bio and Agro Defense Facility (NBAF) site preparation and central utility plant (CUP) construction	\$0	\$0	\$0	R&D	Laboratory Facilities
Total Non- IT investments \$5 million or more	\$0	\$0	\$0		
Total Non-IT initiatives under \$5 million	\$0	\$0	\$0		
Total Non-IT Investments	\$0	\$0	\$0		
Total of IT Investments	\$0	\$0	\$0		
Total all IT and Non-IT Investments	<b>\$0</b>	<b>\$0</b>	<b>\$0</b>		

For FY 2011, the S&T Directorate will request a reprogramming of prior year funds for the National Bio and Agro-defense Facility (NBAF). In FY 2011, the Directorate plans to build the central utility plant (CUP) with the reprogrammed funds in conjunction with matching funds from Kansas.

**NATIONAL BIO AND AGRO DEFENSE FACILITY**

**1. Project Description, Justification, and Scope**

The proposed NBAF is an integrated foreign animal and zoonotic disease research, development, and testing facility that will support the complementary missions of DHS and the United States Department of Agriculture (USDA). Currently, this research occurs at Plum Island Animal Disease Center (PIADC), where researchers have contributed significantly to protecting against Foreign Animal Diseases (FAD) for the past 50 years. The Homeland Security Act of 2002 (Public Law 107-296) transferred the operation of the Plum Island Animal Disease Center (PIADC) from the United States

Department of Agriculture (USDA) to DHS. DHS and USDA discussed a coordinated agricultural research strategy, as called for in the Homeland Security Act of 2002 and Homeland Security Presidential Directive 9 (HSPD-9)", Defense of United States Agriculture and Food (January 30, 2004)." These discussions revealed a capability gap that must be filled by an integrated research, development, test, and evaluation infrastructure for combating agricultural and public health threats posed by Foreign Animal Diseases, emerging, and zoonotic diseases in livestock. The DHS Science and Technology (S&T) Directorate is responsible for addressing this gap.

Accordingly, DHS proposed to build NBAF to bridge the capability gap and to comply with HSPD- 9. Co-locating DHS with USDA's Animal and Plant Health Inspection Service - Veterinary Services (APHIS-VS) and Agricultural Research Service (ARS) at NBAF would increase capabilities in research, diagnostics, and responses to outbreaks in agricultural animals (i.e., cattle, swine, and sheep). NBAF will provide a domestic, modern, integrated high-containment facility that includes Biosafety Level (BSL)-2, BSL-3E, BSL-3Ag, and BSL-4 laboratories for an estimated 350 scientists and support staff to safely and effectively prevent the accidental or intentional introduction of animal diseases of high consequence into the United States.

PIADC, the current facility built in the 1950s, is nearing the end of its lifecycle, and does not contain the necessary BSL facilities to meet the NBAF research requirements. NBAF would fulfill the need for a secure U.S. facility to support collaborative efforts among researchers from Federal and state agencies, academia, and international partners to perform necessary research to protect the agricultural economy and public health. Additionally, the NBAF mission supports the *Report of the Commission on the Prevention of Weapons of Mass Destruction (WMD) Proliferation and Terrorism (December 2008)*, recommending the U.S. undertake a series of mutually reinforcing domestic measures to prevent agro and bioterrorism.

DHS began the site selection process in January 2006. In July 2007, DHS identified five site alternatives that surpassed others in meeting the DHS evaluation criteria. DHS determined these five, along with Plum Island, in the Environmental Impact Statement (EIS) to be reasonable alternatives for the proposed NBAF. The Record of Decision (ROD), issued in January 2009, identified Manhattan, Kansas as the location to build NBAF. The decision was based on the numerous strengths that were evident when evaluating the Manhattan, Kansas site against various evaluation criteria. The EIS also included a comprehensive risk assessment of Foot and Mouth Disease (FMD).

The proposed NBAF consists of a laboratory facility and four outbuildings. The laboratory facility will have BSL-2, BSL-3E, BSL-3Ag, BSL-4, small-scale vaccine and reagent development capabilities, and support space. The outbuildings include a CUP, entry guardhouse, central receiving facility, and maintenance building. The area needed for the NBAF is approximately 500,000 square feet.

In FY 2010, the S&T Directorate's appropriation will fund design and site specific risk assessment studies. In addition, the cost share funds from the State of Kansas will support site preparation including site grading and clearing, roadways, parking, fencing, and utility distribution. For FY 2011, the S&T Directorate will request a reprogramming of prior year funds. In FY 2011, the Directorate plans to build the CUP with the reprogrammed funds in conjunction with matching funds from Kansas.

## **2. Significant Changes**

Since the submission of the FY 2010 budget, the request for NBAF construction funding has been delayed by one year due to the longer than planned process to sell Plum Island. However, the CUP construction will begin in FY 2011, which should help mitigate any delays caused by the change in the funding profile. Construction of the laboratory facility will begin in FY 2012 with expected completion in FY 2016. DHS will complete a site-specific Bio Safety and Bio Security Risk Assessment followed by a National Academy of Sciences (NAS) review prior to beginning construction.

For FY 2011, the S&T Directorate will request a reprogramming of prior year funds. This amount in conjunction with matching funds from Kansas will fund construction of the CUP.

The General Services Administration (GSA) is currently working with DHS to put Plum Island on the market and projects that proceeds from the sale of Plum Island will be available in FY 2012. The FY 2010 Appropriations language (H.R. 2892, Section 535) directs that should the DHS Secretary determine that Plum Island would not be the future site of NBAF; the Secretary will have the General Services Administration (GSA) Administrator sell Plum Island's real and related personal property along with transportation assets supporting PIADC operations through public sale. Proceeds from the sale will be available in an offsetting account of the DHS S&T Directorate's Research, Development, Acquisition, and Operations (RDA&O) to offset site acquisition, NBAF construction, and related costs including due diligence requirements necessary to remediate Plum Island and reimbursement for expenses incurred by GSA. As part of the sale, DHS plans to include a leaseback agreement so that PIADC can continue operations during NBAF construction and until research functions are transferred to the new NBAF facility.

### 3. Project Schedule

	Fiscal Quarter and Year				Total Estimated Completion Cost (\$000)	Total Project Cost (\$000)
	Work Initiated	Work Completed	Physical Construction Start	Physical Construction Complete		
<b>NBAF Project Milestones</b>						
Management, Planning, Pre-Site Conceptual Design (CD), & Technical Support (Mgmt and Tech Spt)	1Q FY 2005	2Q FY 2015			23,000	23,000

Commissioning Phase					12,000	<b>12,000</b>
<b>Total NBAF Project Expenditures</b>	<b>12,713</b>	<b>6,378</b>	<b>72,500</b>	<b>50,500</b>	<b>582,909</b>	<b>725,000</b>
<b>PIADC Transition/D&amp;D</b>					<b>190,000</b>	<b>190,000</b>
<b>Grand Total NBAF + PIADC Transition/D&amp;D</b>	<b>12,713</b>	<b>6,378</b>	<b>72,500</b>	<b>50,500</b>	<b>772,909</b>	<b>915,000</b>

(1) For FY 2011, the S&T Directorate will request a reprogramming of prior year funds for the central utility plant construction (CUP). The Directorate plans to build the CUP with the reprogrammed funds in conjunction with matching funds from Kansas. Kansas has proposed in-kind contributions up to \$110.000 million for site infrastructure and utility improvements for the Manhattan Campus site. Of this amount, Kansas State University will execute \$14.000 million (per the proposal) to upgrade existing utility infrastructure and demolish existing improvements on the NBAF property. The S&T Directorate plans to receive and execute the remaining gift funds from Kansas.

(2) Expenditures in table reflect \$110.000 million proposal of in-kind contributions from Kansas.

(3) Expenditures in FY 2006-2008 adjusted from \$15.000 million (FY 2010 President's Budget) to \$12.7 because some expenditures occurred in first part of FY 2009 instead of FY 2008. However, over \$70 million is on contract to support this effort.

## **5. Cost Estimate Detail and Changes (Dollars in Thousands)**

There are no changes in cost to report.

## **6. Method of Performance**

The NBAF project consists of three phases: design; site preparation and CUP construction; and NBAF building construction. For accountability and in accordance with sound project management principles, the program management team will track all of the project's activities in an organizational work breakdown structure (WBS) to manage cost, scope, and schedule. The DHS S&T Directorate's Office of National Laboratories (ONL), DHS Federal Law Enforcement Training Center (FLETC) Biocontainment Branch, the Construction Contractor (known as the Construction Manager as Contractor (CMc)), and the Architecture and Engineering (A/E) team will form the integrated project team and will coordinate inputs into the WBS. The project execution plan includes the following components:

- Program Organizational Structure;
- Contract Administration Oversight;
- Quality Assurance;
- Status and Cost Reporting;
- Communications with Stakeholders;
- Cross-Task Linkages;
- Risk Management; and
- Cost Controls.

A robust, well-integrated plan that includes a WBS is an essential ingredient in effective project management and will provide the source data for internal and external reporting requirements. Such a plan provides a detailed blueprint for project execution and facilitates project coordination, control, reporting, and communications between team components, and all stakeholders.

The FLETC Biocontainment Procurement Branch (FLETC-BPB) will provide day-to-day management and execution of the NBAF design and construction activities and will lead an experienced team of contracting officers, technical managers, and procurement specialists. The NBAF Project Management Office (PMO) will provide analytical and management support and maintain constant communication and coordination among the project team members, cooperating agencies, stakeholders, regulatory agencies, senior leaders, and other local and regional interests. Project communication will occur both internally and externally. Additionally, the ONL Director and NBAF Project Director may establish other critical interfaces throughout the development process.

The NBAF Project Director and the PMO will implement project controls, address reporting requirements, and produce documents to support this project. Project controls include an integrated project schedule, earned value management (EVM) system, and project communication portal. The EVM will effectively integrate the project's scope,

schedule, and cost elements to assess and optimize project planning and performance. The NBAF project will meet all reporting requirements. Reports include the following:

- Monthly Project Report to Project Director;
- Monthly Periodic Report to DHS Headquarters (HQ) Acquisition Program Management Division (APMD);
- Quarterly Construction Update to Management Directorate;
- Quarterly Probability of Program Success (PoPS) Report to DHS HQ APMD;
- Quarterly Risk Report;
- Yearly Office of Management and Budget (OMB) Exhibit 300;
- Cost Accounting and Status Reports;
- Hill Briefings; and
- On-going availability of the integrated project schedule (IPS).

The NBAF Steering Committee, consisting of individuals from the integrated project team, will execute the NBAF Risk Management Plan. The Committee will identify, manage, track, and control risks in order to minimize adverse impacts that would jeopardize mission success.

The Acquisition Strategy for NBAF includes the involvement of a CMc early in the process, prior to actual construction. This approach improves the project decision-making framework, resulting in a blended perspective on the design and associated construction cost estimates. At pre-determined stages of the project, the CMc and A/E will participate in cost reconciliation exercises that will result in the CMc submitting a Guaranteed Maximum Price (GMP) for a firm fixed price agreement for the work.

### **7. Related Annual Funding Requirements (Dollars in Thousands)**

Once operational, the estimated annual operating and support cost for NBAF is \$44.500 million and is based on the NBAF Site Cost Analysis (July 2008) document, which used actual cost data from an existing facility comparable to the size of the proposed NBAF. The A/E and CMc will further refine this estimate upon completion of detailed design.

### **8. Budget Allocation to Programs**

<b>Program</b>	<b>Allocated Budget (\$000)</b>	
	<b>FY 2010</b>	<b>FY 2011*</b>
Laboratory Facilities	\$32,000	\$0
<b>Total</b>	<b>\$32,000</b>	<b>\$0</b>

\* For FY 2011, the S&T Directorate will request a reprogramming of its prior year funds. In FY 2011, the Directorate plans to build the CUP with the reprogrammed funds in conjunction with matching funds from Kansas.

## **9. Compliance with applicable Public Laws, Regulations, Standards and Executive Orders**

Identify and certify compliance with all applicable laws, regulations, standards, and executive orders to this project.

- DHS, in coordination with the U.S. Department of Agriculture (USDA), is fulfilling requirements from HSPD-9: Defense of the United States Agriculture and Food (January 2004) by constructing the National Bio and Agro-defense Facility (NBAF) to replace the Plum Island Animal Disease Center (PIADC).
- The FY 2006 Appropriations House Report directed S&T to pursue NBAF:
- The Committee recognizes that the Department of Homeland Security's Plum Island facility will need to be replaced in the near future and that other potential locations need to be explored.
- NBAF will provide safe, secure, and state-of-the-art agriculture biocontainment laboratories that research and develop diagnostic capabilities for foreign animal and zoonotic diseases. It will house BSL-3 and -4 laboratories. There is currently no BSL-4 lab for livestock in the United States.
- DHS completed a 3-year, multi-agency competitive site selection process including an EIS assessing the impacts of accidental release of FMD on the mainland.
- DHS and USDA evaluated the existing Biosecurity Research Institute (BRI) at Kansas State University during the design phase and found that the use of this facility may be appropriate to offset some transition costs.
- Final security requirements and design criteria may affect construction costs.
- The FY 2010 Appropriations language (H.R. 2892, Section 535) directs that should the DHS Secretary determine that Plum Island would not be the future site of NBAF; the Secretary will have the GSA Administrator sell Plum Island's real and related personal property along with transportation assets supporting PIADC operations through public sale. Proceeds from the sale will be available in an offsetting account of the DHS S&T Directorate's Research, Development, Acquisition, and Operations (RDA&O) to offset site acquisition, NBAF construction, and related costs including due diligence requirements necessary to remediate Plum Island.
- The FY 2010 Appropriations directed DHS to complete a site-specific Bio Safety and Bio Security Risk Assessment followed by NAS review prior to beginning construction. DHS will award and complete this assessment in FY 2010.

Prior to passage of the Food, Conservation, and Energy Act of 2008 (H.R. 6124 [2008 Farm Bill]) which became law on May 22, 2008, the United States Code (21 U.S.C. Section 113a) stipulated that live Food and Mouth Disease Virus (FMDV) could not be studied on the U.S. mainland unless the Secretary of Agriculture made a determination that such study was necessary and in the public interest and issued a permit for such

research to be conducted on the mainland. Section 7524 of the 2008 Farm Bill directs the Secretary of Agriculture to issue a permit to the Secretary of Homeland Security for work on the live FMDV at any facility that is a successor to the Plum Island Animal Disease Center and charged with researching high-consequence biological threats involving zoonotic and foreign animal diseases. The permit is limited to a single successor facility. On December 18, 2008, Michael Chertoff, the Secretary of Homeland Security, sent a letter to Ed Schafer, the Secretary of Agriculture, requesting that USDA issue a permit if the evaluation process selects a mainland site. On January 9, 2009, DHS received a letter from Secretary Schafer that affirmed USDA's intention of complying with congressional direction to issue a permit for the movement and use of live FMDV at the NBAF.

### PPA Mission Statement

The Borders and Maritime Security Division develops technical capabilities that enhance U.S. border and cargo security without impeding the flow of commerce and travelers. The division works closely with its operational customers to identify and generate the best technologies for securing U.S. borders – including ports-of-entry and vast stretches of remote terrain and waterways – with the ultimate goal of stopping threats before they enter the United States.

### Summary Justification and Explanation of Changes

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
21.0 Travel and transportation of persons	31	205	188	(17)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The request includes a decrease of \$17,000 to correspond with the reduction in R&D funding.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.1 Advisory and assistance services	5,161	2,450	2,216	(234)

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in management and professional support services and engineering and technical services. The request includes a program decrease of \$234,000 to correspond with the reduction in R&D funding.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.2 Other services	-	15	16	1

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The request includes an increase of \$1,000.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.3 Purchases of goods & svcs. from Gov't accounts	711	476	423	(53)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The request includes a program decrease of \$53,000.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.5 Research and development of contracts	25,256	41,035	37,093	(3,942)

Research and Development includes costs for contracts for basic and applied research and development. The request includes a program decrease of \$3,942,000 due to the elimination of funding for projects in Immigration Tools (Basic Research), Border Officer Safety, Sensors and Surveillance, and Conveyance Security Devices.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
26.0 Supplies and materials	2	-	-	-

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
<b>31.0 Equipment</b>	468	-	-	-

Obligations for the purchase of personal property of a durable nature – that is, property that nominally may be expected to have a period of service of a year or more after being put into use without material impairment of its physical condition. Includes obligations for service in connection with the initial installation of equipment when performed under contract.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
<b>41.0 Grants/Subsidies/Contributions</b>	357	-	-	-

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects.

**PPA Mission Statement**

The Chemical and Biological Division works to increase the Nation's preparedness against chemical and biological threats through improved threat awareness, advanced surveillance and detection, and protective countermeasures. The division carries out its activities through three thrust areas: Agriculture, Biological, and Chemical.

**Summary Justification and Explanation of Changes**

	<b>FY 2009 Actual</b>	<b>FY 2010 Enacted</b>	<b>FY 2011 President's Budget</b>	<b>FY 2010 to FY 2011 Change</b>
<b>21.0 Travel and transportation of persons</b>	<b>141</b>	<b>917</b>	<b>781</b>	<b>(136)</b>

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2011 request reflects a decrease of \$136,000 which is a result of the decrease in Research and Development funding thereby decreasing the level of program related travel required.

	<b>FY 2009 Actual</b>	<b>FY 2010 Enacted</b>	<b>FY 2011 President's Budget</b>	<b>FY 2010 to FY 2011 Change</b>
<b>25.1 Advisory and assistance services</b>	<b>12,550</b>	<b>8,158</b>	<b>8,447</b>	<b>289</b>

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in

management and professional support services and engineering and technical services. A program increase of \$289,000 is included. This increase is a result of funding for two AAAS fellows for the FAD Vaccines and Diagnostics and Next Generation Biotdetection projects.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.2 Other services	-	1,289	1,289	-

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.3 Purchases of goods & svcs. from Gov't accounts	561	982	788	(194)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2011 request reflects a decrease of \$194,000. This decrease is the result of a decrease in R&D funding, as well as a decrease in administrative fees paid for contracts processed outside of the Office of Procurement Operations (OPO).

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.5 Research and development of contracts	152,238	194,954	188,387	(6,567)

Research and Development includes costs for contracts for basic and applied research and development. A program decrease of \$6,567,000 in FY 2011 is the result of a decrease in R&D funds, which delayed two projects – the Next Generation Biological Detection and Facility Restoration Demonstration projects – and caused the early termination of two others – Economic Supply Chain Analysis and National Bio-Surveillance Integration System.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
26.0 Supplies and materials	700	500	500	-

Supplies and materials are defined as commodities that are a) ordinarily consumed or expended within one year after they are put into use, b) converted in the process of construction, or manufacture, c) used to form a minor part of equipment or property, or d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
<b>31.0 Equipment</b>	158	-	71	71

Obligations for the purchase of personal property of a durable nature – that is, property that nominally may be expected to have a period of service of a year or more after being put into use without material impairment of its physical condition. Includes obligations for service in connection with the initial installation of equipment when performed under contract. The FY 2011 request reflects an increase of \$71,000. This increase is a result of an increase in equipment purchases for PIADC through the FAD Vaccines and Diagnostics project.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
<b>41.0 Grants/Subsidies/Contributions</b>	650	-	600	600

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2011 request reflects an increase of \$600,000. This increase supports an increase in funding sent to two University Program Centers of Excellence COE's – Foreign Animal and Zoonotic (FAZD) Center and National Center for Food Protection and Defense (NCFPD).

**PPA Mission Statement**

The Command, Control, and Interoperability (CCI) Division focuses on significantly improving operable and interoperable communications for emergency responders, the security and integrity of the Internet, and the development of automated capabilities that “connect the dots” to recognize potential threats. The division’s mission is to transform new and promising concepts into real operational capability through the judicious blending of new technologies and current capabilities. CCI receives its requirements from the following: partners in Federal, State, local, and tribal emergency response; DHS operational components in planning for, detecting, and responding to all hazards; and private sector partners who own, operate, maintain, and use much of the Nation’s cyber infrastructure.

**Summary Justification and Explanation of Changes**

	<b>FY 2009 Actual</b>	<b>FY 2010 Enacted</b>	<b>FY 2011 President's Budget</b>	<b>FY 2010 to FY 2011 Change</b>
<b>21.0 Travel and transportation of persons</b>	<b>396</b>	<b>400</b>	<b>375</b>	<b>(25)</b>

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2011 request reflects a decrease of \$25,000 corresponding to the decrease in overall program spending.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.1 Advisory and assistance services	8,661	4,500	3,041	(1,459)

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in management and professional support services and engineering and technical services. The FY 2011 request reflects a decrease \$1,459,000, corresponding to the decrease in overall program spending in cyber security, interoperability communications, information sharing pilots, methods and tools for forensics, and special (classified) program studies on the evolution of terrorist vs. security forces over time.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change

**PPA Mission Statement**

The Explosives Division develops the technical capabilities to detect, interdict, and lessen the impacts of non-nuclear explosives used in terrorist attacks against mass transit, civil aviation, and critical infrastructure. This includes passenger-, baggage-, and cargo-screening technologies; blast-resistant aircraft construction; integrated protective systems for high-value facilities; and the detection and defeat of Improvised Explosive Devices. The requested amount will help address Explosives' strategic challenges of detecting non-nuclear explosives and disrupting terrorist attacks.

**Summary Justification and Explanation of Changes**

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
<b>21.0 Travel and transportation of persons</b>	<b>514</b>	<b>800</b>	<b>665</b>	<b>(135)</b>

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2011 request includes a decrease of \$135,000, which supports the Divisions plan to conduct fewer site visits in response to the Secretary's Efficiency Review.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
<b>25.1 Advisory and assistance services</b>	<b>9,238</b>	<b>5,526</b>	<b>4,876</b>	<b>(650)</b>

Advisory and assistance services include services acquired by contract from non-Federal sources (e.g., the

private sector, foreign governments, State and local governments, tribes, etc.), as well as from other units within the Federal Government. The FY 2011 request includes a decrease of \$650,000, which reflects an overall decrease in funding for the Division.

**PPA Mission Statement**

The Infrastructure and Geophysical Division's mission is to increase the Nation's preparedness for and response to natural and man-made threats through superior situational awareness, emergency response capabilities, and critical infrastructure protection. The division develops technical solutions and reach-back capabilities to improve State, local, tribal, and private sector preparedness for and response to all-hazards events impacting the U.S. population and critical infrastructure. The Division also models and simulates the Nation's critical infrastructures to determine how various scenarios will affect each sector, provide decision support tools to guide decision makers in identifying gaps and vulnerabilities, and develop predictive tools and methods to aid in preparing for and responding to various catastrophes.

**Summary Justification and Explanation of Changes**

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
21.0 Travel and transportation of persons	24	325	262	(63)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. A program decrease of \$138,000 supports the division's plan to conduct fewer site visits in response to the Secretary's Efficiency Review.

21.0 Travel and transportation of persons	429	635	635	-

Travel includes all costs of S&T's personnel while in an authorized travel status, either directly or by reimbursing the traveler. There is no change in projected costs for FY 2011.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
22.0 Transportation of things	25	-	-	-

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
23.1 Rental payments to GSA	2,521	1,200	1,250	50

GSA Rent provides funding for rental space provided by General Services Administration (GSA) to the National Urban Security and Technology Laboratory (NUSTL), formerly Environmental Measurements Laboratory (EML) facilities. The FY 2011 request reflects an increase of \$50,000 due to increases in rent and building services for this space.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
23.2 Rental payments to others	71	-	-	-

Other rent includes all payments to a non-Federal source for rental space, land, and structures.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
--	----------------	-----------------	----------------------------	---------------------------

23.3 Communications utilities and miscellaneous charges	14,094	12,371	12,804	433
---	--------	--------	--------	-----

Communications, Utilities, and Misc Charges provides funds for communications, utilities, and related charges at laboratories managed by ONL. The FY 2011 request reflects an increase of \$433,000 to cover increases in the utilities, including electricity, at Plum Island Animal Disease Center (PIADC), Transportation Security Laboratories (TSL), and National Biodefense Analysis and Countermeasures Center (NBACC).

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.1 Advisory and assistance services	43,472	43,051	10,446	(32,605)

Advisory and assistance provides funds for Intergovernmental Personnel Act and consultants in management and professional support services and engineering and technical services. Such personnel support both operations and construction activities. The FY 2010 request reflects a decrease of \$32,605,000 due to the completion of National Bio and Agro Defense Facility (NBAF) detailed design and risk assessment and the move of Transportation Security Agency's test and evaluation (T&E) activities to the Explosives PPA.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.2 Other services	323	345	345	-

Other Services provide funds for mission essential training and tuition. There is no change in projected costs for FY 2011.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.3 Purchases of goods & svcs. from Gov't accounts	30,224	17,955	4,611	(13,344)

Purchase from Government Accounts provides costs for administrative support, contracting administration support, and rent for interim non-GSA facilities. The FY 2011 request reflects a decrease of \$13,344,000, reflecting a decrease in funds to the Department of Energy (DOE) for construction at Pacific Northwest National Laboratory (PNNL) - Area 300. The S&T Directorate fulfills its commitment to DOE in FY 2010. Also, the decrease reflects elimination of rent payments to Fort Detrick for interim facilities as FY 2011 will be NBACC's first year of full operations.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.4 Operation and maintenance of facilities	28,157	42,772	45,445	2,673

Operation and maintenance of facilities provides normal daily operations of PIADC, NUSTL, TSL, and NBACC. The costs include maintenance and repair of building and land. The FY 2011 request reflects an increase over FY 2010 of \$2,673,000 as a result of increases in private sector and government facility support contracts, including security. The increase is also partially due to the first full year of NBACC operations in FY 2011.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.7 Operation and maintenance of equipment	29	616	616	-

Operation and maintenance of equipment provides normal daily operations and maintenance of PIADC, NUSTL, TSL, and NBACC equipment. There is no change in projected costs for FY 2011.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
26.0 Supplies and materials	2,958	4,918	5,163	245

Supplies and materials provides daily office supplies, fuel for PIADC, and gasoline. The FY 2011 request reflects an increase of \$245,000 due to projected fuel costs.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
31.0 Equipment	8,795	3,844	1,800	(2,044)

Equipment provides costs for personal property, and information technology hardware/software, and includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2011 request reflects a decrease of \$2,044,000. The equipment in FY 2010 are part of start-up costs for NBACC operations, and the decrease reflects that ONL will have purchased most of the equipment needed prior to FY 2011.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
32.0 Land and structures	-	4,480	19,416	14,936

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
32.0 Land and structures	-	4,480	19,416	14,936

Land and Structures provides costs for construction and capital improvement activities. The FY 2011 request reflects an increase of \$14,936,000 for infrastructure upgrades at TSL. This multi-year project consists of constructing an independent testing and evaluation (IT&E) laboratory; renovating and constructing the developmental, test, and evaluation (DT&E) laboratory space; and providing additional office and non-explosive storage space.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
41.0 Grants/Subsidies/Contributions	24	-	-	-

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects.

**PPA Mission Statement**

The Testing & Evaluation and Standards program provides technical support and coordination to assist the Nation's emergency responders in the acquisition of equipment, procedures and mitigation processes that are safe, reliable and effective. The program carries out its activities through two thrust areas: Test & Evaluation (T&E) and Standards.

**Summary Justification and Explanation of Changes**

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
<b>21.0 Travel and transportation of persons</b>	<b>35</b>	<b>300</b>	<b>200</b>	<b>(100)</b>

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2011 request reflects a decrease of \$100,000 due the reduction in program activities: a reduced scope for T&E Oversight of DHS acquisition programs and fewer standards development efforts.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
<b>25.1 Advisory and assistance services</b>	<b>7,876</b>	<b>1,100</b>	<b>959</b>	<b>(141)</b>

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in management and professional support services and engineering and technical services. The FY 2011 request reflects a decrease of \$141,000 due to the reduction in program activities: a reduced scope for T&E Oversight of DHS acquisition programs and fewer standards development efforts.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.2 Other services	327	-	-	-

Other Services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	FY 2009 Actual	FY 2010 Enacted	FY 2011 President's Budget	FY 2010 to FY 2011 Change
25.5 Research and development of contracts	19,094	27,600	22,015	(5,585)

Research & Development includes costs for contracts for basic and applied research and development and T&E and standards development. The FY 2011 request reflects a decrease of \$5,585,000 due to decrease in standards development efforts and reduced scope for T&E Oversight of DHS acquisition programs. Specifically, the decrease eliminates or delays standards development for cargo screening and sensor technologies, personal chemical decontamination, human/machine interface for emergency responders, blast resistant trashcan receptacle, universal access controls for credentialing, and collaboration with National Institute of Occupational Safety and Health (NIOSH) on Personal Protective Equipment.

# I. STRATEGIC CONTEXT FOR THE FY 2011 BUDGET

## **A. Mission and Description of the Science & Technology Directorate**

The Science and Technology (S&T) Directorate advises the Secretary on research and development (R&D) efforts to support the Department's mission, and conducts basic and applied research, development, testing, and evaluation (RDT&E) activities relevant to the Department through both intramural and extramural programs.

In fulfillment of the enabling and follow-on legislation, Secretary Napolitano stated that the urgent and overriding mission of the Department of Homeland Security (DHS) is to secure the homeland, which means protecting our Nation's borders by finding and killing the roots of terrorism and stopping those who intend to hurt us; wisely enforcing the rule of law at our borders; protecting our national cyber infrastructure; and preparing for and responding to natural and man-caused disasters with speed, skill, compassion, and effectiveness. She stated that DHS should build on its science and technology portfolio for the following reasons:

- Better science helps us to understand emerging threats and teaches us how to identify, counter, and mitigate them.
- Better technology can expand our capabilities and free our agents to spend their time where it is most valuable, while at the same time protecting the interests of private citizens by minimizing law enforcement's impact on lawful activities.
- Technology can also aid us in consequence management, so that we are better prepared to respond to any type of disaster.

This budget requests the minimum resources needed to provide the technologies to address the Administration's threat prioritization:

- High-Consequence Weapons of Mass Destruction (WMD);
- Al Qaeda and Related Global Terrorist Movements;
- Mass Attacks, Intrusions, and Disruptions to Information and Communications Infrastructure;
- Pandemic, Infectious Disease, and Other Natural Disasters;
- Illegal Trafficking and Related Transnational Crime; and
- Smaller-Scale Terrorism and Violent Extremism.

The S&T Directorate's budget request aligns with Secretary Napolitano's priorities:

- Counterterrorism and Domestic Security Management;
- Securing our Borders;
- Smart and Tough Enforcement of Immigration Laws;
- Preparing for, Responding to, and Recovering from Disasters.

### **Mission Statement**

The S&T Directorate will improve homeland security by providing our customers, the operating components of DHS, and State, local, tribal, and territorial emergency responders and officials with state-of-the-art technology that helps them to accomplish their missions.

The S&T Directorate directs, funds, and conducts RDT&E, and enables the procurement of technology and systems to prevent, protect against, and respond to terrorist threats and natural disasters. The S&T Directorate collaborates and coordinates with Federal, State, and local government and private sector entities to conduct its activities. It establishes an efficient system to transfer homeland security developments and technologies to the operational elements of the Department to enhance their ability to execute all missions, now and in the future, and to meet the high priority homeland security RDT&E needs of the Nation.

The S&T Directorate leads the homeland security research enterprise outside of DHS by remaining proactively engaged with universities, research institutions, government laboratories, and private industry that conduct R&D in areas important to addressing our customers' homeland security requirements.

### **Description of Directorate**

The S&T Directorate accomplishes its mission through customer-focused and output-oriented RDT&E programs that balance risk, cost, impact, and time to deliver. These RDT&E programs support the needs of the operational components of the Department and address crosscutting areas such as standards and interoperability.

About 50 percent of the S&T Directorate's investment is in transition technologies – lower-risk projects dedicated to addressing customer-defined capability needs. Approximately six percent of the S&T Directorate's investment is in higher risk innovative prototypical demonstrations, which, if successful, will place leap-ahead technology in the operating components' hands much more quickly than the incremental improvements typical of most acquisition programs. About 20 percent of the S&T Directorate's investment portfolio is in long-term, basic research conducted primarily in universities and laboratories in areas of enduring homeland security relevance that could lead to revolutionary changes in the way we approach homeland security challenges. This balanced portfolio ensures that the Directorate maintains a self-replenishing pipeline of future capabilities and products to transition to customers.

Other components often leverage the S&T Directorate's expertise in program management, technical oversight, testing and evaluation, and systems engineering. These developmental activities such as testing new border security technologies for Customs and Border Protection (CBP) or leveraging existing advanced R&D to make spiral improvements to off-the-shelf infrastructure protection technologies are more technologically mature than the typical science and technology program.

The S&T Directorate's R&D functions consist of seven technical divisions aligned with enduring functional disciplines. This, along with additional offices, allows the S&T Directorate to better meet the Department's strategic goals.

### **Seven Divisions**

Borders and Maritime Security Division – develops and transitions tools and technologies that improve the security of our Nation's borders and waterways without impeding the flow of commerce and travelers.

Chemical and Biological Division – works to increase the Nation's preparedness against chemical and biological threats through improved threat awareness, advanced surveillance and detection, and protective countermeasures.

Command, Control and Interoperability Division – focuses on operable and interoperable communications for emergency responders, security and integrity of the Internet, and development of automated capabilities to recognize potential threats.

Explosives Division – develops the technical capabilities to detect, interdict, and lessen the impacts of non-nuclear explosives used in terrorist attacks against mass transit, civil aviation, and critical infrastructure.

Human Factors Division – applies the social and behavioral sciences to improve detection, analysis, and understanding of the threats posed by individuals, groups, and radical movements. It supports the preparedness, response, and recovery of communities impacted by catastrophic events and it advances homeland security by integrating human factors into homeland security technologies.

Infrastructure and Geophysical Division – develops capabilities to increase the Nation’s preparedness for and response to natural and man-made threats through superior situational awareness, emergency response capabilities, and critical infrastructure protection.

Radiological and Nuclear Division – identifies, explores, develops, and demonstrates scientific and technological approaches that address gaps in nuclear detection, response and recovery, such as: dramatically improving the performance of nuclear detection components and systems; significantly reducing the operational burden of the rad/nuc detection mission; or responding to and recovering from large-scale rad/nuc attacks.

#### **Crosscutting Offices:**

Innovation – focuses on high-risk/high-reward, homeland security R&D that could lead to technology breakthroughs that significantly enhance DHS operations. The Director of Innovation oversees the Homeland Security Advanced Research Project Agency (HSARPA). The *Homeland Security Act of 2002* directs HSARPA to “support basic and applied homeland security research to promote revolutionary changes in technologies that would promote homeland security; advance the development, testing and evaluation, and deployment of critical homeland security technologies; and accelerate the prototyping and deployment of technologies that would address homeland security vulnerabilities”. The agency’s efforts are complementary to the S&T Directorate’s other programs and projects, pushing scientific limits to address gaps in areas where current technologies and R&D are inadequate or non-existent.

Test & Evaluation and Standards – provides policy and oversight of the Department’s test and evaluation program and technical support and coordination to assist the Nation’s emergency responders in the acquisition of equipment, procedures, and mitigation processes that are safe, reliable, and effective.

Transition – focuses on delivering near-term products and technology enhancements by working with the Department’s components, industry, and other agencies to expedite the technology transition process.

Research – Laboratory Facilities – executes Laboratory Facilities programs and provides the Nation with a coordinated, enduring core of productive science, technology, and engineering laboratories, organizations, and institutions, which can provide the knowledge and technology required to secure our homeland.

Research – University Programs – engages the academic community to conduct research and analyses and provides education and training programs to support DHS priorities and enhance homeland security capabilities.

The seven technical Divisions and additional offices link to three R&D investment portfolio directors in a matrix-managed structure. The three portfolio directors – Director of Research, Director of Transition, and Director of Innovation – provide crosscutting coordination of the investment strategy within the technical Divisions. The matrix structure allows the S&T Directorate to provide more comprehensive and integrated technology solutions to its customers by appropriately bringing all disciplines together in developing leading-edge research solutions.

## **B. Major Activities and Key Strategic Goals**

S&T Directorate focus is on organization and research portfolio management strategy – both of which allow the S&T Directorate to better identify, enable, and transition new capabilities to our customers to better protect the Nation. S&T develops and manages an integrated program of science and technology, from basic research through technology product transition.

The S&T Directorate is customer-focused and delivers capabilities that DHS components can rely on to meet their operational needs. To accomplish this, the S&T Directorate facilitates customer-led Capstone Integrated Product Teams (IPTs) in 13 functional areas and charges each one with identifying capability requirements to meet DHS mission requirements. The S&T Directorate uses the products of these IPTs to identify the highest priority needs and allocate resources to those programs that support the priorities established by the DHS customers. The S&T Directorate's business model of structured Capstone IPTs ensures that product transition investments align to customer mission requirements.

Each Capstone IPT works to identify, validate, and prioritize capability requirements across the Department (within a functional area) that the S&T Directorate can address. The interaction of technologists and operators has improved the prioritization of efforts and the focus on relevant, cost-effective solutions that make a significant difference. The S&T Directorate's product transition process ensures that appropriate technologies are harvested and integrated into the DHS acquisition system for our customers. Outputs from the IPTs drove considerable changes to programs in the FY 2010 budget request, which continue into FY 2011.

In executing its portfolio of investments, the S&T Directorate will draw upon the R&D capability across the public enterprise, private sector, and academia called the Homeland Security Research Enterprise. This consortium of capability locates and promotes the best R&D possible. With the authorities provided in the *Homeland Security Act of 2002*, the S&T Directorate has the organic ability to leverage not only DHS laboratories, the Homeland Security Studies and Analysis Institute, and the DHS Centers of Excellence, but also the Department of Energy (DOE) National Laboratories to meet homeland security research requirements.

The Nation's technical superiority in science and technology is a key factor in the effort to ensure a secure homeland. The fulfillment of the Department's mission requires a concerted effort to access, leverage, and enhance the vast resources and expertise of the Nation's public and private sectors, academic community, non-governmental organizations, and other scientific bodies. This effort is primarily the responsibility of the S&T Directorate and requires that the Nation's homeland security

R&D efforts focus on meeting mission requirements. R&D requires adequate funding to meet long-term as well as near-term objectives. A significant portion of the S&T Directorate's programs directly support federally mandated homeland security priorities. To perform its varied missions, the S&T Directorate received \$932.587 million in FY 2009 and \$1,006.471 million (before rescission) in FY 2010. The S&T Directorate is requesting \$1,018.264 million in FY 2011. The following are a few examples of how the S&T Directorate has used its funds in FY 2009 and plans to use FY 2010 and FY 2011 funds to further enhance and enable homeland security capabilities:

***Management and Administration*** –

With the FY 2010 appropriation of \$143.200 million, the S&T Directorate will continue to implement several efficiency initiatives to make better use of its resources. In FY 2010, M&A will provide salaries and benefits for 278 FTEs onboard by October 2009 and will fund business operations, contributions to the DHS Working Capital Fund, and other administrative functions. Additionally, S&T will convert 17 support contractors to Federal employees. The S&T Directorate plans to continue to implement several efficiency initiatives with FY 2011 funds of \$151.959 million. The FY 2011 request includes a staffing increase of 39 FTE; this is a combination of a 12 FTE reduction to offset costs for the FY 2011 inflation, an increase of 35 FTE from converting Management and Administration funded contractors to Federal employees, 4 FTE for the annualization of acquisition review board support positions and a transfer of 12 FTE from the Domestic Nuclear Detection Office. The S&T Directorate will continue to reduce its reliance on contractor staff and includes an increase of 35 FTE to the authorized FTE level; this increase in FTE will not require additional funds and will be offset within the appropriation by reducing M&A funded contract staff and replacing them with M&A funded Federal employees.

Overall, the S&T Directorate has:

- Continued to reduce business operation expenses by centralizing supply purchases;
- Organized central career developmental training within the S&T Directorate;
- Consolidated National Capital Region floor space to one location;
- Implemented a telework program;
- Developed and implemented an H1N1 plan for S&T;
- Continued to reduce the number of Intergovernmental Personnel Act employees; and
- Reduced reliance on contractor staff.

***Borders and Maritime*** –

FY 2009 appropriation of \$33.050 million:

- Completed field-testing of the Advanced Container Security Device (ASCD) prototypes and conducted a large-scale operational test. The ACSD is a small unit that attaches to the inside of a container to monitor all six sides of the container, reporting any intrusion, door opening or presence of human cargo.
- Initiated capability enhancements to existing secondary non-intrusive inspection systems to detect or identify terrorist contraband items (e.g., drugs, money, illegal firearms) or humans. This project addresses an important capability gap to enhance cargo screening and examination systems through advanced non-intrusive inspection.
- Initiated a program to develop technologies for the advanced detection identification, apprehension, and enforcement capabilities along the maritime borders and rapid coordinated responses to anomalies and threats. Major investment areas include: 1) persistent wide-area surveillance in the maritime environment, 2) port and coastal sensor surveillance, and 3) enhanced sensor/data fusion technologies for command center situational awareness.

FY 2010 appropriation of \$44.181 million will:

- Deliver improved prototypes for future field-testing and transition the Container Security Device specifications to Customs and Borders Protection (CBP) and DHS Policy.
- Build, demonstrate, and transition the first phase of improved capabilities for detecting Semi-Submersible Self-Propelled Vessels (SPSS) to customers.
- Transition the Light-Emitting Diode Incapacitator (LEDI) and Safe Quick Undercarriage Immobilization Device (SQUID) efforts to first responder communities via the commercialization process. The execution of these products began as Small Business Innovation Research efforts.

FY 2011 request of \$39.936 million plans to:

- Develop a next-generation non-intrusive inspection (NII) system that will be used to detect terrorist materials, contraband items (e.g., drugs, money, illegal firearms), and stowaways at border crossings, maritime ports, and airports.
- Transition and deliver Air Cargo Composite Container and Secure Carton performance requirements to TSA for use in the Certified Cargo Screening Program.
- Transition ballistics protection prototype to CBP; demonstrate the hidden compartment inspection device in an operational environment and deliver to CBP and USCG; demonstrate pursuit termination for vehicle stopping; and demonstrate less-lethal personnel compliance capability to CBP.
- Research and characterize the different key urban border regions, identify tunnel detection technologies, and determine the effectiveness and limitations of the various technologies against different types of cross-border tunnels.
- Develop and demonstrate multi-sensor and multi-data fusion capability of the Advanced Fusion Technologies project to CBP and USCG; demonstrate and transition initial Advanced Scene Understanding (ASU) land capability on the Southern Border to CBP
- Provide a Port Security Testbed to demonstrate maturing technologies in an operationally relevant environment.
- Demonstrate renewable energy sensor capabilities for the inland waterways and port/harbor security environments.

### ***Chemical and Biological –***

FY 2009 appropriation of \$200.408 million:

- Initiated a new cycle of biodefense analysis, targeting the five to 20-year future timeframe. The project convened a new executive review panel (ERP) and conducted several workshops to inform perspectives.
- Transitioned 10 potential biothreat agent-specific assays to the Centers for Disease Control (CDC) Lab Response Network (LRN) to support the National Biomonitoring Architecture (NBMA). Initiated transition of the Signature Erosion Analysis Report to CDC to support the continuous evaluation of current assays for robustness and integrity. In addition to the above detection assays, the Bioassay – Near Term project is also actively involved in the development of Rapid Antimicrobial Susceptibility assays to support medical countermeasure distribution and dispensation.
- Completed development and testing of Bio-Agent Autonomous Networked Detector (BAND), demonstrating that the capability to automatically capture and genetically identify biological agents at threat concentrations is a technical reality. The system is a candidate for BioWatch Generation 3 Detection System and is ready for field and operational test and evaluation by the Office of Health Affairs (OHA).
- Conducted bioforensics research in support of criminal investigative cases, with the ultimate goal of attribution, apprehension, and prosecution of the perpetrator, in fulfillment of HSPD-10.

Expanded capability by increasing the number of assays that are ISO 17025 accredited and ISO validated. Maintained continuous hub-and-spoke operations and conducted casework.

- Conducted biennial, end-to-end risk assessments on biological agents and conducted laboratory studies to close major scientific gaps that could significantly affect how the Nation structures its defenses. Focused activities on the BTRA and the Integrated Chemical Biological Radiological Nuclear Risk Assessment (iCBRN RA), which enables concurrent analysis of chemical, biological, radiological, and nuclear threats and is due in 2010.
- Conducted an exercise and demonstration of wide-area decontamination methods and restoration system tools. The project also developed a Seattle Urban Area (SUA) specific plan.

FY 2010 appropriation of \$206.800 million will:

- Perform final exercises and demonstrations through a series of tabletops, field exercises, and workshops for the SUA plan.
- Deliver the third Bioterrorism Risk Assessments (BTRA) and the second iCBRN RA reports and tools. These reports will include enhanced and advanced agents and a prototype desktop tool (BTRA Consequence Calculator Interface).
- Transition the operational aspects of the Integrated Consortium of Laboratory Networks (ICLN) operations to OHA and continue to support specific laboratory response technological assessments and improvements in the S&T Directorate's program. This laboratory network system strengthens early detection and consequence management and is consistent with HSPDs 9, 10, 21, and 22.
- Perform a preliminary architecture analysis of food systems for defending against biological threats. This analysis will lay the foundation for prioritizing future studies in this sector.
- Transition the Rapid Antimicrobial Susceptibility Assay to CDC LRN for implementation and deployment to all 163 LRN laboratories. This will allow the laboratories to rapidly assess the sensitivity of the biothreat agent to medical countermeasure supporting decision making for distribution and dispensation of appropriate post-exposure prophylaxis.
- Complete all regulatory testing requirements for the first next-generation differentiate infected from vaccinated animals (DIVA) vaccine for foot-and-mouth disease (FMD).

FY 2011 request of \$200.863 million plans to:

- Expand the second iCBRN RA report, and the use of the BTRA Consequence Calculator Interface to provide additional decision support.
- Complete requirements for additional serotypes for the next-generation FMD vaccine; coordinate implementation of USDA DIVA assays; safety test commercially available international vaccines; conduct research on improving potency and duration of immunity of FMD molecular vaccines; and leverage the knowledge gained to improve other FAD biological countermeasures.
- Perform laboratory-based research to supply crucial data for the BTRA. This will include analysis of antibiotic resistant *Bacillus anthracis* and its impact on current therapies. This analysis will address requirements for the Biomedical Advanced Research and Development Authority to develop medical countermeasures for the Strategic National Stockpile.
- Demonstrate a prototype high-throughput multiplex biological identification platform to enhance laboratory capabilities across multiple application areas. This instrument will be capable of analyzing biological threats in environmental, food, water, animal, plant, and human clinical samples for multiple purposes and by multiple agencies.
- Develop promising new concepts and approaches to prevent, respond to, or recover from the intentional contamination or disruption of the Nation's complex food system along with continuing ongoing R&D activities to support critical priorities.

- Test collectors for their ability to maintain viability of pathogens collected as aerosols. The Viable Particle Capture project will deliver and transition the prototype to OHA.
- Deliver an economic model for chemical facility effects and complete a first probabilistic risk assessment (PRA).
- Develop additional analytical methods for emerging chemical threat agents (CTAs) prioritized by risk and intelligence.

***Command, Control and Interoperability –***

FY 2009 appropriation of \$74.890 million:

- Piloted the Critical Infrastructure Inspection Management System (CIIMS) to the Los Angeles Police Department (LAPD) ARCHANGEL program that was integrated into the patrol, assessment, prevention, response, and after-action process of critical infrastructure protection.
- Launched a demonstration between Voice over Internet Protocol (VoIP) and Project 25 gateways. The project also accelerated the development and testing of Project 25 IP-based interfaces for infrastructure inter-radio-frequency subsystems, console subsystems, and fixed base station subsystems.
- Initiated activities in Process Control Systems (PCS) Security to support improved security for process control systems used across multiple critical infrastructure sectors and developed PCS model applications to Oil and Gas Sector(s) to ultimately improve infrastructure security.

FY 2010 appropriation of \$81.764 million will:

- Improve the United States Secret Service (USSS) encryption-breaking architecture in warranted criminal and terrorist cases by creating a scalable, distributed network that will allow USSS investigators to harness the computing power of tens of thousands of computers to break through challenging encrypted files.
- Integrate several existing statewide information and visualization platforms in the Southern U.S. into a regional information-sharing framework and provide advanced tools that support the gathering, managing, analyzing, sharing, and securing of relevant information.
- Continue working with emergency responders to perform an in-depth evaluation of the Multi-Band Radio (MBR), which provides them with the unprecedented capability of communicating on all public safety radio bands.
- Create a global R&D enterprise for visualization and data sciences. The collaborative activity will enable the S&T Directorate to take advantage of worldwide expertise in these critical areas of science and quickly translate research into real tools and capabilities.

FY 2011 request of \$74.832 million plans to:

- Standardize, pilot, and evaluate wireless broadband technologies and applications across multiple networks; test and evaluate multi-band radio technologies for use in emergency communications and day-to-day operations; and foster a dynamic information-sharing environment for emergency responders.
- Accelerate transition of new cyber security technologies into commercial products and services for end-users who include first responders, critical infrastructure providers, the banking and finance sector, private industry, and government.
- Reduce the risk of terrorist attacks and enhance preparations for and responses to natural and man-made disasters by developing tools to handle massive amounts of information that are widely dispersed in a variety of forms.
- Provide local, State, and Federal Law Enforcement components with R&D for technologies that aid in the discovery, investigation, and prosecution of terrorists and criminals.

### ***Explosives –***

FY 2009 appropriation of \$96.149 million:

- Conducted detonation assessment tests to determine the impact, friction, and electrostatic discharge sensitivities of homemade explosives (HME) threats.
- Reported on spectroscopic and trace technology R&D for remote or standoff detection of Vehicle Borne Improvised Explosive Devices (VBIEDs). These reports established the baseline and feasibility for employing explosive detection techniques as a means of VBIED detection.
- Developed advanced capabilities to detect explosives and concealed weapons, including IEDs or HMEs with detonation potential in passenger cabins and weapons that may aid the hostile takeover of mass transit. Introduced new standalone technologies, such as Computed Tomography (CT), to continue improving detection performance and the detection of novel explosives.

FY 2010 appropriation of \$120.809 million will:

- Develop a prototype for screening moving vehicles remotely, as well as a prototype of standalone spectroscopic technologies to detect both explosives and explosive device components for the standoff detection of VBIEDs.
- Test and validate Electronic Countermeasures (ECM) operational load sets for use in current ECM systems and examine the potential for improvements based on antenna, amplifier, receiver, and signal processing technologies.
- Investigate air blast interaction with blast resistant glass and laminated glass to calculate structural responses to a range of explosives in urban environments.

FY 2011 request of \$120.809 million plans to:

- Complete certification for the next-generation checkpoint detection system to detect novel explosives.
- Deliver the mass-spectrometry, bench-top detector for independent testing and evaluation and pilot testing by TSA.
- Deliver next set of low-cost, non-hazardous training aids of selected HME to enable canines to detect these materials.
- Develop prototypes of standalone technologies using spectroscopic technologies to detect both “explosives” and “explosive device components” for the standoff detection of Vehicle and Suicide Borne Bombers.

### ***Human Factors –***

FY 2009 appropriation of \$12.460 million:

- Initiated development of a contactless multi-modal biometrics identification prototype and created corresponding reference datasets, which are essential to system design and prototype delivery.
- Delivered modeling capabilities and content analysis for the computerized analytical framework focused on determining whether radical groups are likely to engage in violence and what ideological, organizational, and contextual factors may influence this decision or spark action.

FY 2010 appropriation of \$16.087 million will:

- Initiate development of a Mobile Biometric System prototype to provide screening capabilities for use at remote sites where communication access is limited, including along U.S. borders, during disasters, terrorist incidents, and at sea.

- Demonstrate multi-cultural, real-time intent detection, which will lead to a hostile-intent detection prototype to identify unknown or potential terrorists through an interactive process with 75 percent accuracy.

FY 2011 request of \$13.435 million plans to:

- Focus on iris image biometric technologies and conduct an iris-quality evaluation and calibration study.
- Demonstrate a Multi-modal Mobile Biometric System prototype.
- Transition multi-culturally validated intent indicators for the Hostile Intent Detection Automated Prototype.
- Transition a mobile, collaborative collection and reporting tool with multi-cultural indicators to support mobile Screening Passengers by Observation Techniques (SPOT) collection and reporting.

### ***Infrastructure and Geophysical –***

FY 2009 appropriation of \$75.816 million:

- Started a project to provide a comprehensive and transparent disaster logistics tracking system across the entire area of responsibility of all disaster response partners. This system will allow the Federal Emergency Management Agency (FEMA) to manage critical resources more effectively and will enhance real-time coordination and situational awareness, setting the standard for all disaster response partners.
- Developed measures for tunnel protection by analyzing current technology, and developed a design tool prototype for demonstration and conducted a field test.
- Developed advanced, automated, affordable underwater monitoring and surveillance technologies to detect underwater threats in harsh environments for extended periods that will be capable of seamless and transparent integration into infrastructure operations and operate in tandem and in support of law enforcement and other protective services/agencies.

FY 2010 appropriation of \$74.958 million will:

- Conduct a technology demonstration of surveillance technologies to effectively monitor critical infrastructure and develop system components for practical use at a chosen infrastructure site.
- Design and demonstrate a recovery transformer in a laboratory environment. The recovery transformer will be easy to transport and install, have low maintenance and long service life, which will improve the resiliency of the electric grid.
- Develop a 3D-locator system prototype for First Responders that will improve accuracy to within three feet and improve signal penetration through difficult structures (i.e., underground, over ground, piles of rubble). Conduct testing in major urban areas and deliver an initial set of locators for field-testing at several locations across the Nation.
- Continue development of an integrated sensor package to monitor a First Responder's vital signs – such as cardiac rhythm, heart rate, blood pressure, body temperature, and oxygen saturation, which could indicate Pre-Ventricular Contractions (PVCs) or cardiac arrhythmias – by developing an engineering model and a brassboard model and conduct system tests at several test facilities.

FY 2011 request of \$36.122 million plans to:

- Continue research on key sensors and algorithms to support advanced surveillance technologies (based on the Office of Infrastructure Protection's requirements) that can more effectively monitor critical infrastructure and key resources (CIKR) and allow for the detection of subtle changes against a background environment, incorporating advanced sensors including optical,

infrared, ultraviolet, and acoustic. Develop automated anomaly detection that will replace operator-dependent monitoring of large number of cameras, reducing costs and ensuring adequate protection of CIKR against natural and man-made threats.

- Demonstrate the Recovery Transformer, a new type of electrical power transformer for use during recovery from emergency grid blackouts that is easy to transport and install, has low maintenance requirements and a long service life, and will increase the resiliency of the power grid.
- Integrate and test modeling technologies for a simulation-based incident planning and response system, which will provide FEMA analysts, decision makers, policy makers, emergency managers, and infrastructure operators an integrated modeling and simulation capability to effectively, economically, and rapidly verify and validate response tactics, plans and procedures, as well as conduct “what-if” type analyses prior to, during, and after an incident.
- Stand up the Wild Fire Detection and Prediction Project, which will develop the tools to detect, locate, and predict the magnitude of wild fires to help prevent wildland-urban interface (WUI) fire disasters.

### ***Innovation –***

FY 2009 appropriation of \$33.000 million:

- Conducted early demonstrations of rapid, non-contact, three-dimensional fingerprint scanners that will be more successful at capturing fingerprints the first time, with far greater detail, allowing for increased speed and accuracy in records matching.
- Developed early prototypes of technology that will leverage National Aeronautics and Space Administration’s (NASA) expertise with novel-gas sensor architectures for manned space missions or use porous silicon based detection to be incorporated into everyday devices such as cell phones for ubiquitous chemical/biological agent detection.
- Conducted a demonstration of a 3-1-1 bag-screening prototype in an airport to test the system’s ability to distinguish between liquids in an operational environment, where environmental factors can affect the technology’s sensitivity.

FY 2010 appropriation of \$44.000 million will:

- Develop a database of liquids and demonstrate the capability to seamlessly screen segregated liquids (without the 3-1-1 bag constraint) in laboratory.
- Demonstrate a stand-alone fault current limiter (FCL) technology, which is a significant technological advancement that would be an alternative to the relatively high-risk FCL cable if installed in the grid.
- Demonstrate a more advanced tunnel plug to protect mass transit tunnels from fire, smoke, and flooding.
- Develop sample collectors to scan for dangerous goods while they are in transit and also while ships load and unload cargo.

FY 2011 request of \$44.000 million plans to:

- Test approaches for innovative, low cost biological detection in the laboratory and down-select for prototype development.
- Demonstrate a prototype of the infrared, persistent surveillance system in a laboratory.
- Evolve the people screening process from active to passive detection so that screening does not require direct interaction between the operator and the subject.
- Demonstrate sample collector capabilities for container scanning.
- Extend MagViz’s capabilities to detect liquids inside of baggage.

### ***Laboratory Facilities –***

FY 2009 appropriation of \$161.940 million:

- Completed the construction of the National Biodefense Analysis and Countermeasures Center (NBACC).
- Issued a Record of Decision (ROD) that selected Manhattan, Kansas as the site for the National Bio and Agro-Defense Facility (NBAF).
- Conducted cleanup activities at the National Urban Security Transportation Laboratory (NUSTL) to return space to commercial use specifications.
- Began full Chemical Security Analysis Center (CSAC) operations in the state-of-the-art facility, which will be the premier facility with the capability to integrate knowledge across the full chemical threat spectrum.
- Began a detailed design of the NBAF facility.
- Operated and maintained DHS laboratories.
- Supported construction of Pacific Northwest National Laboratory Capability Replacement Laboratory.

FY 2010 appropriation of \$150.188 million will:

- Complete NBAF detailed design, conduct site risk assessment, and begin site preparation.
- Plan for the eventual transfer of activities from Plum Island Animal Disease Center (PIADC) to NBAF.
- Achieve full operations at NBACC, which will conduct forensic analyses and interpretation of material recovered following a bioterrorist attack; and conduct laboratory experiments and studies to fill important gaps in our knowledge of current and future threats.
- Construct explosives bunkers at the Transportation Security Laboratory (TSL).
- Operate and maintain DHS laboratories.
- Support construction of Pacific Northwest National Laboratory Capability Replacement Laboratory.

FY 2011 request of \$122.000 million plans to:

- Build Central Utility Plant (CUP) for NBAF (using prior year reprogrammed funds) in conjunction with matching funds from the State of Kansas.
- Complete design for TSL upgrades; begin renovating space to increase developmental, test, and evaluation (DT&E); and begin constructing related general-purpose administrative space.
- Operate and maintain DHS laboratories.

#### ***Radiological and Nuclear Division -***

FY 2011 request of \$109.000 plans to:

- Transferred the Research and Development from the Domestic Nuclear Detection Office (DNDO). The S&T Directorate created a new Radiological and Nuclear (Rad/Nuc) PPA to reflect the transfer. Rad/Nuc will investigate alternative technologies related to Helium-3, the most efficient and commonly used material for neutron detection (for which the demand exceeds the supply). Additionally, the PPA will fund Advanced Technology Demonstrations (ATD), including the Shielded Nuclear Alarm Resolution (SNAR) project and Intelligent Radiation Sensing System (IRSS) for maritime, air, and land venues.
- Initiate a new program, Response and Recovery, to provide advanced planning, develop CONOPS, and fund exercises and training for responding to and recovering from rad/nuc attacks.

#### ***Test & Evaluation (T&E) and Standards –***

FY 2009 appropriation of \$28.674 million:

- Finalized standard test materials for Anthrax bacteria (*Bacillus anthracis*) and Ricin, release interim guidance for chemical and biological decontamination, and develop guidance for first-responder assessment of detection technology claims.
- Provided standards for image quality for biometric images of face, fingerprint, and iris to enhance interoperability of US-VISIT and FBI Integrated Automated Fingerprint Identification System (IAFIS) fingerprint databases.
- Established and issued policy and procedures as well as coordinate T&E resources to verify technical performance and operational effectiveness/suitability. Completed the Integrated DHS T&E Infrastructure Plan that will matrix the available domain of T&E capabilities to the DHS acquisition programs and the S&T Directorate's Capstone IPT projects.

FY 2010 appropriation of \$29.000 million will:

- Complete the development of trace explosives standard test materials for RDX and C4 explosives. Develop a test kit for evaluation and quality control of walk-through portals. Finalize and adopt standard test methods for X-ray inspection systems and body scanners.
- Initiate the chemical warfare agents/toxic industrial chemicals detection standards program, including standoff (optical) detection systems.
- Collaborate with FEMA to identify and prioritize specific product categories for assessment through the System Assessment and Validation for Emergency Responders (SAVER) program. SAVER tests and assesses commercially available products that fall within product categories listed on the DHS Authorized Equipment List and provides results along with other relevant equipment information to the First Responder community.

FY 2011 request of \$23.174 million plans to:

- Develop standards related to chemical and biological threat detection including a comprehensive suite of performance standards for detection equipment, guidance on how to respond to chemical/biological incidents, and simulants for testing.
- Develop standards related to explosives detection, including standards for detectors, protective equipment, body-scanning systems, and cargo.
- Test and assess commercially available equipment that falls within categories listed on the DHS Authorized Equipment List and provide the results along with other relevant equipment information to the First Responder community.
- Develop T&E policies and procedures that define T&E activities required of all DHS components throughout the system acquisition process.

### ***Transition –***

FY 2009 appropriation of \$33.830 million:

- Initiated prototype development for a vehicle-mounted chemical and biological wireless sensor capable of identifying and reporting to a command post 13 toxic industrial chemicals.
- Expanded coordination with other Federal agencies to create Federal best practices, standards, and guidelines and worked with public and private consortiums/associations to identify promising technologies for prompt consideration under the SAFETY Act.
- *HSI – FY 2009 appropriation of \$5.0 million (in FY 2008 and FY 2010 HSI is a program in the Transition PPA):*
  - Conducted studies and analyses for the Department and its components in support of their mission.
  - Re-competed a studies and analysis FFRDC under the authority of Section 305 of the Homeland Security Act of 2002.

FY 2010 appropriation of \$46.134 million will:

- Educate and inform universities and national laboratories that research, develop and pilot new innovative homeland security technologies about the SAFETY Act.
- Refine support and analysis of customer gaps through the Capstone IPT process and monitor efforts for cost, schedule, and capability to ensure technologies effectively transition into acquisition.
- Develop and design technologies to address capability gaps identified by Federal, State, local and tribal First Responders in the First Responder IPT. Test technologies, assess them for usability, and commercialize them to make the technology solutions available across all First Responder communities.

FY 2011 request of \$42.134 million plans to:

- Refine the IPT process ensuring efficiency, effectiveness, increased leadership insight, customer involvement and integration with component and Department planning activities to ensure technology gaps are incorporated in the IPT process at the earliest appropriate stage.
- Demonstrate up to six prototypes developed based on capability gaps received through the TechSolutions website.
- Conduct Regional Homeland Security Interagency Symposia to strengthen DHS regional collaborative efforts, to communicate achievements, and to collect State/Local/territorial/tribal input on technology gaps.
- Prioritize and develop technology solutions proposed by the First Responder IPT.

#### ***University Programs –***

FY 2009 appropriation of \$50.270 million:

- Established a new DHS Center of Excellence (COE), the Center of Excellence for Command, Control, and Interoperability, merging activities of the Institute of Discrete Sciences University Affiliate Centers and the DHS Regional Visualization and Analytics Centers.

FY 2010 appropriation of \$49.350 million will:

- Extend decision analysis methodologies at the Center for Risk and Economic Analysis of Terrorism Events (CREATE) to include dynamic interactions between attackers and defenders and develop capabilities for including intelligence data and analysis into decision support tools.
- Expand the master's program in Science and Technology Leadership at the National Defense University (NDU) to other DHS components.

FY 2011 request of \$40.000 million plans to:

- Continue developing required expertise, infrastructure, and training output at National Center for Food Protection and Defense (NCFPD) to provide DHS and food sector agencies/owners with comprehensive, internal capabilities in food defense.
- Continue to serve as a systems integrator between border security technologies, border management, and immigration policies at the Center of Excellence for Border Security and Immigration to deliver innovative, practical solutions.
- Continue to address the full range of hazards to the Nation's surface transportation infrastructure at the National Transportation Security Center of Excellence, including terrorist attack, natural disaster, pandemic disease, and vulnerabilities unique to the transportation of hazardous petrochemicals.
- Develop a pilot program to provide opportunities to DHS employees to pursue science and engineering PhDs at the COEs.

## **C. Resources Requested and Performance Impact**

### **Current Services**

The proposed FY 2011 budget request of \$1,018.264 million, an increase of \$11.793 million, will maintain some ongoing activities in science and technology research to detect and counter threats and attacks; to protect the Nation's critical infrastructure, both physical and cyber; to analyze and assess threats and vulnerabilities; and to provide cutting edge technologies to operational end-users.

The S&T Directorate has planned and budgeted for its activities in FY 2011 by focusing and incorporating our DHS customers' priorities to conduct the urgent and overriding mission of DHS by:

- Securing the homeland;
- Protecting our Nation's borders by finding and killing the roots of terrorism and to stop those who intend to hurt us;
- Enforcing wisely the rule of law at our borders;
- Protecting our national cyber infrastructure;
- Preparing for and responding to natural and man-caused disasters with speed, skill, compassion, and effectiveness.

## **D. Performance Based Budget Highlights by Program<sup>1</sup>**

For each mission-oriented program, the program performance goal, alignment to Secretary's Priorities, total dollars and FTE, and Government Performance and Results Act (GPRA) performance plan measure/s are shown below. Additional measures are also displayed, as appropriate, to provide a more thorough context of expected performance results.

<b>Program: Border and Maritime Security</b>						
<b>Performance Goal:</b> Improve the capability of homeland security personnel to secure the Nation's land, maritime, and air borders through science and technology.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	\$78,475	\$41,207	\$33,413	\$40,733	\$50,613	\$47,015
<b>FTE</b>	16	12	17	19	14	15

### **Performance Plan Measures**

**Measure:** Percent of borders and maritime security program milestones that are met, as established in the fiscal year's budget execution plan

**Description of Measure:** This measure reflects the percent of borders and maritime security program milestones that meet their fiscal year budget execution and five - year plan goals. These milestones are derived from the Directorate's Integrated Product Teams in which the Borders and Maritime Security program works closely with its DHS customers (e.g. Customs and Border Patrol, Immigration and Customs Enforcement, and U.S. Coast Guard), to identify customer requirements, set goals for milestones and deliverables, plan for the allocation of resources, discuss the status of projects, etc. ST develops Technology Transition Agreements with its customers to identify what ST will do to meet customer requirements in the development of a technology, and how a customer expects to invest in this technology once it is ready.

<sup>1</sup> The Domestic Nuclear Detection Office's (DNDO) R&D program is proposed for transfer to the S&T Directorate in FY11. This section does not report on the DNDO R&D transfer to the new S&T Radiological and Nuclear program, which represents \$128,140 in funding. Performance plans will be developed for the Radiological and Nuclear program in 2010.

<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	N/A	100%	90%	90%	90%	90%
<b>Actual:</b>	None	80%	91%	91%	N/A	N/A

<b>Measure:</b> Percent of transition program funding dedicated to developing technologies in direct response to Department of Homeland Security components' requirements						
<b>Description of Measure:</b> The percent of science and technology transition funding that directly supports the development of technologies requested by the Department components such as Customs and Border Protection, to ensure that operational end users are provided with the technology and capabilities they need to detect and prevent terrorist attacks, means of terrorism and other illegal activities.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	80%	94%	95%	96%	97%	98%
<b>Actual:</b>	94%	98%	99%	96%	N/A	N/A

<b>Program: Chemical and Biological</b>						
<b>Performance Goal:</b> Improve the understanding, technologies, and systems necessary to protect against possible biological and chemical attacks on the Nation's population, agriculture, or infrastructure through science and technology.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	\$529,944	\$343,511	\$239,483	\$231,192	\$236,907	\$236,192
<b>FTE</b>	106	23	49	54	67	74

**Performance Plan Measures**

<b>Measure:</b> Percent completion of a set of guidance, resources, and tools to effectively restore key infrastructure to normal operation after a chemical or biological attack						
<b>Description of Measure:</b> This measure reflects program activities to develop the required components of a capability to restore critical infrastructure from an attack with persistent chemical agents, including TICs, CWAs, and NTAs, as well as to restore areas contaminated with biological agents, such as anthrax. Progress in the comprehensive chemical and biological restoration effort is measured as the percentage of key products and deliverables that comprise together the full required capability. Such deliverables and products include the required technologies and guidance documents along with key reports developed to enable critical decisions along the development pathway. Through the broad proliferation of the guidance documents, restoration templates, and technology surveys that are products of this effort, the preparedness of local, regional, and national response entities for response to and recovery from a chemical or biological attack will be greatly enhanced.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	74%	91%	97%
<b>Actual:</b>	None	None	N/A	68.5%	N/A	N/A

<b>Measure:</b> Percent of chemical and biological program milestones that are met, as established in the fiscal year's budget execution plan						
<b>Description of Measure:</b> This measure reflects the percent of chemical and biological program milestones that meet their established fiscal year budget execution and five - year plan goals. These milestones are derived from the Directorate's Integrated Product Teams in which the Chemical and Biological program works closely with its DHS customers (e.g., the Office of						

Infrastructure Protection, and the Chief Medical Office), to identify customer requirements, set goals for milestones and deliverables, plan for the allocation of resources, discuss the status of projects, etc. ST develops Technology Transition Agreements with its customers to identify what ST will do to meet customer requirements in the development of a technology, and how a customer expects to invest in this technology once it is ready.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	N/A	88%	90%	93%	95%	96%
<b>Actual:</b>	None	89%	93%	95.6%	N/A	N/A

<b>Measure:</b> Percent of high - priority chemical and biological agents detectable in target operational scenarios						
<b>Description of Measure:</b> This measure reflects progress across the entire chemical and biological detection program toward developing technologies for transition to appropriate customers for deployment and use. Targeted agents for these detection systems are prioritized through biological and chemical terrorism risk assessments, which are updated by the program on a biennial basis and reviewed by other agencies with a stake in the outcome. The set of agents chosen comprise some 90 - 95% of total risk presented by chemical and biological agents.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	17%	39%	68%
<b>Actual:</b>	None	None	N/A	17%	N/A	N/A

<b>Program: Command, Control and Interoperability</b>						
<b>Performance Goal:</b> Improve and develop operable and interoperable communications for emergency responders; develop tools to improve the security and integrity of the internet; and improve and develop automated capabilities to recognize potential threats through science and technology.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	\$117,322	\$75,184	\$69,933	\$87,269	\$93,668	\$87,885
<b>FTE</b>	23	20	29	31	26	27

### Performance Plan Measures

<b>Measure:</b> Number of cyber security data sets collected and approved						
<b>Description of Measure:</b> This measure tracks the cumulative number of data sets available in the protected repository, a secure library that is made available to specified researchers. Each data set contains information about real network and system traffic that researchers can use to design, produce, and evaluate new cyber security solutions. In FY 2009 the Science and Technology (ST) Directorate continued the ongoing collection, refreshing, and sharing of data sets, and addition of new partners as applicable for the Protected Repository for the Defense of Infrastructure against Cyber Threats (PREDICT) repository. This is important because the repository needs to continually add new and pertinent data so that the cyber security research community can have the most recent information to respond to new attacks.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	85	350	450	150	200
<b>Actual:</b>	68	263	281	111	N/A	N/A

<b>Measure:</b> Number of proof - of - concept reconnaissance, surveillance and investigative technologies demonstrated						
---	--	--	--	--	--	--

<b>Description of Measure:</b> This measure identifies the number of proof - of - concept (feasibility) of technologies demonstrated that aid in the discovery, investigation, and prosecution of terrorists and criminals. A proof of concept is a feasibility assessment that is considered a milestone in the development of a fully functioning prototype. These assessments are most meaningful and used by the program manager for the Reconnaissance, Surveillance, and Investigative Technologies subprogram or Division executives to determine the necessity of a continued investment.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	N/A	5	8	9	8
<b>Actual:</b>	None	None	7	9	N/A	N/A

<b>Measure:</b> Percent of command, control and interoperability program milestones that are met, as established in the fiscal year's budget execution plan						
<b>Description of Measure:</b> This measure includes the percent of command, control, and interoperability program milestones that meet their fiscal year budget execution and five - year plan goals. These milestones are derived from the Directorate's Integrated Product Teams in which the Command, Control and Interoperability program works closely with its DHS customers (e.g., the Office of Intelligence and Analysis, the Federal Emergency Management Agency, and the Office of Emergency Communications), to identify customer requirements, set goals for milestones and deliverables, plan for the allocation of resources, discuss the status of projects, etc. ST develops Technology Transition Agreements with its customers to identify what ST will do to meet customer requirements in the development of a technology, and how a customer expects to invest in this technology once it is ready.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	N/A	75%	90%	95%	100%	100%
<b>Actual:</b>	None	75%	94%	81%	N/A	N/A

<b>Program: Explosives</b>						
<b>Performance Goal:</b> Improve explosive countermeasure technologies and procedures to prevent attacks on critical infrastructure, key assets, and the public through science and technology.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	\$89,809	\$121,518	\$89,404	\$107,570	\$138,397	\$141,961
<b>FTE</b>	18	48	21	23	39	44

### Performance Plan Measures

<b>Measure:</b> Number of new or improved technologies available for transition to the customers at a Technology Readiness Level (TRL) 6 or above						
<b>Description of Measure:</b> The number of technologies includes those that have reached a maturity level of TRL 6 or above; this indicates that a technology is ready for demonstration. These technologies will be transitioned to the primary customer, the Transportation Security Administration.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	NA	2	3	5	5	4
<b>Actual:</b>	None	0	3	5	N/A	N/A

<b>Measure:</b> Percent of explosives program milestones that are met, as established in the fiscal year's budget execution plan						
<b>Description of Measure:</b> This measure reflects the percent of explosives program milestones meeting their fiscal year budget execution and five - year plan goals. These milestones are						

derived from the Directorate's Integrated Product Teams in which the Explosives program works closely with its DHS customers (e.g. the Transportation Security Administration and U.S. Secret Service), to identify customer requirements, set goals for milestones and deliverables, plan for the allocation of resources, discuss the status of projects, and etc. ST develops Technology Transition Agreements with its customers to identify what ST will do to meet customer requirements in the development of a technology, and how a customer expects to invest in this technology once it is ready.

<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	N/A	80%	85%	80%	85%	85%
<b>Actual:</b>	None	61%	77%	72%	N/A	N/A

**Program: Human Factors**

**Performance Goal:** Improve detection, analysis, and the understanding of threats posed by individuals, groups, and radical movements through science and technology.

<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	\$7,484	\$10,656	\$17,949	\$15,895	\$18,429	\$15,808
<b>FTE</b>	2	13	14	15	5	5

**Performance Plan Measures**

**Measure:** Percent of human factor program milestones that are met, as established in the fiscal year's budget execution plan

**Description of Measure:** This measure presents the percent of human factor program milestones meeting their fiscal year budget execution and five - year plan goals. These milestones are derived from the Directorate's Integrated Product Teams in which the Human Factors program works closely with its DHS customers (e.g. the Office of Screening Coordination and Operations, and US Citizenship and Immigration Services), to identify customer requirements, set goals for milestones and deliverables, plan for the allocation of resources, discuss the status of projects, etc. ST develops Technology Transition Agreements with its customers to identify what ST will do to meet customer requirements in the development of a technology, and how a customer expects to invest in this technology once it is ready.

<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	NA	90%	90%	90%	90%	90%
<b>Actual:</b>	None	73%	100%	95%	N/A	N/A

**Program: Infrastructure and Geophysical**

**Performance Goal:** Improve the capability for State, local, tribal, and private sector preparedness for and response to all hazardous events impacting the population and critical infrastructure through science and technology.

<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	\$50,999	\$83,131	\$73,366	\$84,412	\$85,871	\$42,417
<b>FTE</b>	10	7	15	16	24	13

**Performance Plan Measures**

<b>Measure:</b> Percent of infrastructure and geophysical program milestones supporting preparedness that are met, as established in the fiscal year's budget execution plan						
<b>Description of Measure:</b> This measure reflects the percent of programmatic and technical preparedness milestones of the Infrastructure and Geophysical that meet their fiscal year budget execution and five - year plan goals. These milestones are derived from the Directorate's Integrated Product Teams in which the Infrastructure and Geophysical program works closely with its DHS customers (e.g. the Office of Infrastructure Protection and the Federal Emergency Management Agency), to identify customer requirements, set goals for milestones and deliverables, plan for the allocation of resources, discuss the status of projects, etc. ST develops Technology Transition Agreements with its customers to identify what ST will do to meet customer requirements in the development of a technology, and how a customer expects to invest in this technology once it is ready.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	90%	90%	90%
<b>Actual:</b>	None	None	N/A	100%	N/A	N/A

<b>Measure:</b> Percent of infrastructure and geophysical program milestones supporting the protection of critical infrastructure that are met, as established in the fiscal year's budget execution plan						
<b>Description of Measure:</b> This measure reflects the percent of programmatic and technical milestones supporting the protection of critical infrastructure that meet their fiscal year budget execution and five - year plan goals. These milestones are derived from the Directorate's Integrated Product Teams in which the Infrastructure and Geophysical program works closely with its DHS customers (e.g. the Office of Infrastructure Protection and the Federal Emergency Management Agency), to identify customer requirements, set goals for milestones and deliverables, plan for the allocation of resources, discuss the status of projects, etc. ST develops Technology Transition Agreements with its customers to identify what ST will do to meet customer requirements in the development of a technology, and how a customer expects to invest in this technology once it is ready.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	NA	90%	90%	90%	90%	90%
<b>Actual:</b>	None	69%	90%	100%	N/A	N/A

**Additional Measures**

<b>Measure:</b> Number of analyses/simulations completed on critical infrastructure decision support systems that provide actionable information to help protect U.S. critical infrastructure						
<b>Description of Measure:</b> This measure represents the cumulative number of analyses/simulations completed on critical infrastructure decision support systems. These systems provide a rational, scientifically - informed approach for prioritizing critical infrastructure protection strategies and resource allocations using modeling, simulation, and analyses to assess vulnerabilities, consequences, and risks; develop and evaluate protection, mitigation, response, and recovery strategies and technologies; and provide real - time support to decision makers during crises and emergencies. This measure demonstrates the availability of actionable information to help protect the U.S.'s critical infrastructure from acts of terrorism, natural disasters, and other emergencies.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	N/A	4	N/A	N/A	N/A
<b>Actual:</b>	None	None	0	N/A	N/A	N/A

**Program: Innovation**

<b>Performance Goal:</b> Support significant technology breakthroughs that have the potential to greatly enhance DHS operations through science and technology.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	\$0	\$46,922	\$42,270	\$41,808	\$50,406	\$51,699
<b>FTE</b>	0	17	24	26	14	16

**Performance Plan Measures**

<b>Measure:</b> Percent of innovation program milestones that are met, as established in the fiscal year's budget execution plan						
<b>Description of Measure:</b> This measure reflects the percent of program milestones met for the Innovation/Homeland Advanced Research Projects Agency (HSARPA) portfolio programs that meet their fiscal year budget execution and five - year plan goals. The program focuses on high - risk/high - reward, homeland security Research and Development that could lead to technology breakthroughs and products that significantly enhance DHS operations. The program requires flexibility to adapt its projects at critical go/no - go decision points. The five - year plan details the allocation of dollars and projected accomplishments for the current and future fiscal years. The targets reflect the high - risk/high - reward nature of this type of research.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	NA	45%	50%	60%	60%	60%
<b>Actual:</b>	None	83%	88%	78%	N/A	N/A

<b>Program: Laboratory Facilities</b>						
<b>Performance Goal:</b> Improve the Nation's core of productive science, technology, and engineering laboratories, organizations, and institutions, which can develop the knowledge and technology required to secure our homeland through science and technology.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	\$104,825	\$142,006	\$140,849	\$195,853	\$189,551	\$143,468

<b>Actual:</b>	None	None	None	95%	N/A	N/A

<b>Program: Test Evaluation and Standards</b>						
<b>Performance Goal:</b> Improve and develop standards and test and evaluation protocols for products, services, and systems used by the Department of Homeland Security and its partners to ensure consistent and verifiable effectiveness of equipment and tools through science and technology.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	\$35,017	\$29,556	\$32,518	\$32,596	\$33,244	\$27,148
<b>FTE</b>	7	6	7	8	10	8

**Performance Plan Measures**

<b>Measure:</b> Number of Department of Homeland Security official technical standards introduced per year						
<b>Description of Measure:</b> This measure gauges the number of standards introduced for adoption by the Department of Homeland Security per year. Note that not all standards that are introduced are adopted. The Standards Council and our working groups identify standards and examine their suitability for adoption. Only those standards with clear requirements and applicability are adopted.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	15	20	20	8	10	10
<b>Actual:</b>	15	19	5	8	N/A	N/A

<b>Measure:</b> Percent of standards introduced that are adopted by Department of Homeland Security and partner agencies						
<b>Description of Measure:</b> This measure reflects the percent of standards and protocols for products, services, and systems that are adopted by the Department and its partner agencies. Adoption of standards and protocols ensure a high level of effectiveness among the technologies and capabilities end users need to detect and prevent terrorist attacks, means of terrorism and other illegal activities.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011

### Performance Plan Measures

<b>Measure:</b> Number of applications for SAFETY Act coverage submitted.						
<b>Description of Measure:</b> The Office of SAFETY (Support Anti - Terrorism by Fostering Effective Technologies) Act Implementation (OSAI) is responsible for review and approval of applications for Designation and Certification of Qualified Anti - Terrorism Technologies under the SAFETY Act program. This measure reflects the cumulative number of applications received regarding anti - terrorism technologies under the SAFETY Act. The number of applications received is an indicator of long - term success because it is a reflection of the homeland security market's desire to develop and deploy anti - terrorism technologies and the necessity of a program that will enable this process. By continuing to increase the number of applications the SAFETY Act program will continue to be effective in enabling the widespread commercial availability of effective anti - terrorism technologies.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	138	220	167
<b>Actual:</b>	None	None	N/A	218	N/A	N/A

<b>Measure:</b> Number of SAFETY Act "transition" (new, highly innovative) technologies awarded						
<b>Description of Measure:</b> In order to stay up to date with the continually changing nature of terrorism, the Office of SAFETY (Support Anti - Terrorism by Fostering Effective Technologies) Act Implementation (OSAI) will seek out those evolving technologies that can serve a homeland						

security mission and provide coverage to enable their transition into the commercial market, at a rate of 20 percent a year. A "transition" technology is defined as any technology that is awarded Developmental Testing and Evaluation (DTE) Designation, and those that can be considered new and innovative (i.e. a new technological application in the homeland security arena). OSAI is actively seeking out these technologies in an effort to address the ever - changing nature of terrorism. The SAFETY Act program is the only federal program that attempts to help industry transition these developmental technologies into the commercial marketplace.

<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	17	21	25
<b>Actual:</b>	None	None	N/A	17	N/A	N/A

**Measure:** Percent of transition program milestones that are met, as established in the fiscal year's budget execution plan

**Description of Measure:** This measure reflects the percent of milestones of the Transition program that meet their fiscal year budget execution and five - year plan goals. The five - year plan details the allocation of dollars and projected accomplishments for the current and future fiscal years.

<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	NA	80%	85%	86%	87%	88%
<b>Actual:</b>	None	100%	100%	94.12%	N/A	N/A

#### Additional Measures

**Measure:** Average processing time for SAFETY Act application.

**Description of Measure:** The Office of SAFETY (Support Anti - Terrorism by Fostering Effective Technologies) Act Implementation (OSAI) is responsible for review and approval of applications for Designation and Certification of Qualified Anti - Terrorism Technologies (QATTs) under the SAFETY Act program. The percentage of applications processed within 120 days is important for the encouragement of development and deployment of anti - terrorism technologies. Decisions can be made at a swifter pace when applications are processed in a timely manner. The program reflects the intent of Congress to ensure that the threat of liability does not deter potential sellers from developing and commercializing technologies that could significantly reduce the risk of, or mitigate the effect of, acts of terrorism.

<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	120 days	120 days	120 days
<b>Actual:</b>	None	None	N/A	102	N/A	N/A

#### **Program: University Programs**

**Performance Goal:** Improve university - based research, development, and education systems to enhance the Nation's homeland security through science and technology.

<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	\$47,147	\$55,016	\$55,341	\$56,201	\$56,535	\$47,086
<b>FTE</b>	9	9	9	10	16	15

**Performance Plan Measures**

<b>Measure:</b> Number of Homeland Security - Science, Technology, Engineering and Mathematics students supported						
<b>Description of Measure:</b> This measure reflects the current number of students pursuing science, technology, engineering, and mathematics studies that receive scholarships, fellowships, and internships through the Office of University Programs. The students may include both undergraduates and graduate students. The University Centers of Excellence can make the awards for scholars and fellowships in their disciplinary areas. The University Centers are mission - focused university consortiums that leverage the multi - disciplinary capabilities of universities to address the Department of Homeland Security needs.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	N/A	200	178	150	150
<b>Actual:</b>	None	None	203	180	N/A	N/A

<b>Measure:</b> Percent of supported students who declare and complete a Homeland Security - Science, Technology, Engineering and Mathematics major or program of study						
<b>Description of Measure:</b> This measure gauges the effectiveness of the program's efforts to develop the scientific and technical leadership needed for the Nation's future security by measuring the percent of Science and Technology Directorate - funded students that complete their Homeland Security - Science, Technology, Engineering and Mathematics (HS - STEM) program of study. The percentage is calculated from the pool of students eligible to graduate in the current fiscal year. The funds are granted through the University Centers of Excellence (COEs) which are mission - focused university consortiums that leverage the multi - disciplinary capabilities of universities to address the Department of Homeland Security's needs.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	N/A	85%	85%
<b>Actual:</b>	None	None	None	N/A	N/A	N/A

<b>Measure:</b> Percent of university programs milestones that are met, as established in the fiscal year's budget execution plan						
<b>Description of Measure:</b> This measure describes the percent of University program milestones that meet their fiscal year budget execution and five - year plan goals. The five - year plan details the allocation of dollars and projected accomplishments for the current and future fiscal years.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	N/A	80%	85%	85%	85%	85%
<b>Actual:</b>	None	60%	100%	100%	N/A	N/A

### iii. Status of Congressionally Requested Studies, Reports, and Evaluation

#### Department of Homeland Security Domestic Nuclear Detection Office

Fiscal Year	Due Date	Reference/Citation	Requirement	Status
2010	Prior to implementation	DHS APPROPRIATIONS ACT, 2010 (H.R.2892 and Conference Report, P.L. 111-83)	Section 577. The conference agreement includes a provision rescinding \$8,000,000 from unobligated balances of prior year appropriations for DNDO 'Research, Development, and Operations' as proposed by the Senate. The House proposed no similar provision. DNDO shall notify the Committees on the distribution of the rescission prior to its implementation.	Will notify Committees on the distribution prior to implementation of rescission
2010	Quarterly	DHS APPROPRIATIONS ACT, 2010 (H.R.2892 and Conference Report, P.L. 111-83)	The conferees direct DNDO to continue quarterly briefings to the Committees on progress in developing architecture to guide technology research and applications; the status of such technologies, including their strengths and weaknesses; and timetables to develop and deploy them	Most recent briefing October 2009
2010	Quarterly	DHS APPROPRIATIONS ACT, 2010 (H.R.2892 and Conference Report, P.L. 111-83)	The conferees also direct DNDO to provide quarterly briefings to the Committees, as proposed in the House report, on development of the Cargo Advanced Automated Radiography Systems and Joint Integrated Non-Intrusive Inspection programs; red team exercises and assessments, including vulnerabilities identified and recommendations for addressing them; the progress in the Human Portable Radiation Detection System development effort, including operational testing and production of new technologies for advanced operations; and progress in developing alternatives to existing detection materials and systems, in particular progress in finding alternatives to neutron detectors based on Helium-3.	Most recent briefing October 2009
2010	12/27/2009	DHS APPROPRIATIONS ACT, 2010 (H.R.2892 and Conference Report, P.L. 111-83)	The conference agreement includes \$5,000,000 within the amounts appropriated for Research, Development, and Operations to improve operations and capabilities of currently deployed polyvinyl toluene (PVT) radiation portal monitors and handheld radiation detectors, and to deploy any improvements to the field. The conferees direct DNDO to submit a plan for expenditure, development, and deployment for such efforts to the Committees not later than 60 days after the date of enactment of this Act. The conferees direct DHS to notify the Committees if DNDO determines that it cannot obligate this funding.	In progress; estimated submission in late February.
2009	30-Dec-08	Consolidated Security, Disaster Assistance, and Continuing Appropriations Act, 2009, Senate Report p.135 (Public Law 110-329)	The Committee directs DNDO to submit a report within 90 days of the date of enactment of this act on the National Technical Nuclear Forensics Center [NTNFC], specifically on implementation of its quality assurance program and the results of the NAS study of its capabilities, infrastructure, and workforce, and the steps NTNFC is taking to implement the recommendations.	Spoke to Committee; will submit after the NAS study is completed
2009	Prior to the procurement of ASPs for primary and secondary deployment	Consolidated Security, Disaster Assistance, and Continuing Appropriations Act, 2009, Senate Report p.136 (Public Law 110-329)	The bill prohibits DNDO from full-scale procurement of Advanced Spectroscopic Portal [ASP] monitors until the Secretary submits a report to the Committees on Appropriations certifying that a significant increase in operational effectiveness will be achieved.	In progress.

<b>BUDGET REQUEST AND SUPPORTING INFORMATION</b>
--

**Management and Administration:**

## **I. Appropriation Overview**

### **A – Mission Statement for Management and Administration:**

The Domestic Nuclear Detection Office (DNDO) is the lead agency within the Department of Homeland Security to integrate efforts across the Department in combating the threat of nuclear attack, and the lead departmental representative for all interagency activities to coordinate the U.S. Government's (USG) nuclear defense posture. Key to the success of the Department of Homeland Security (DHS) is improving the ability to mitigate risks across the entire threat spectrum. In recognition of the catastrophic risk posed by the use of a nuclear weapon within the United States, the Department has integrated all nuclear detection development, test, evaluation, and operational support into a single office. DNDO is dedicated to both the development and enhancement of the Global Nuclear Detection Architecture (GNDA); acquisition and deployment support for the domestic detection system; coordination of effective sharing of nuclear detection-related information; the coordination of nuclear detection research and development; the establishment of procedures and training for end users of nuclear detection equipment; and national-level integration, development, and advancement of an enduring national nuclear forensics capability.

The Management and Administration (M&A) appropriation provides for the management and administrative support to accomplish that goal. M&A includes all costs related to Federal personnel, including detailees from other organizations. In addition, M&A provides the material support for DNDO personnel, such as supplies and materials, and administrative needs such as information technology (IT) equipment and support. Finally, all of DNDO contributes M&A funds to the DHS Working Capital Fund (WCF) for rent and other facilities costs, building security, Human Resource services, etc.

### **B – Budget Activities:**

Management and Administration: As a jointly-staffed office, the DNDO request provides for 126 DNDO Federal staff positions (122 FTEs) of which approximately 20 are detailees. DNDO provides reimbursement to parent organizations for detailed staff. Additionally, the Management and Administration request includes all DNDO rent payments and most other contributions to the DHS Working Capital Fund (WCF) and other shared services.

As DNDO continues to look beyond containerized cargo and other established mission areas, diverse solutions will be continually developed requiring a managed growth of personnel to maintain proper oversight and effective program management. A shift of emphasis beginning in FY 2010 will result in increased architectural studies and analysis in support of the Global Nuclear Detection Architecture (GNDA). Additional FTP are

required to work toward continued assessment of the rad/nuc risk and the associated gaps in the GNDA.

As DNDO has matured its technical programs, the Business and Finance Office has been improving its ability to provide internal controls guidance, fiscal accountability, and transparency. To ensure a framework of sound financial management additional resources are requested to provide improvements in financial management operations.

Historically, DNDO has averaged a retention rate of over 92% of our career professionals. This stability in the workforce supports our confidence that we will both achieve and maintain our staffing strength. This request represents a realistic plan to achieve original staffing goals for DNDO.

**C – Budget Request Summary:**

The Domestic Nuclear Detection Office requests \$36.992 million for M&A in FY 2011. This represents a \$1.508 million decrease from the FY 2010 Enacted Appropriation.

## II. Summary of FY 2011 Budget Estimates by Program/Project Activity (PPA)

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Management and Administration:**  
Summary of FY 2011 Budget Estimates by Program Project Activity

FY 2011 Request  
(Dollars in Thousands)

Program Project Activity	FY 2009		FY 2010		FY 2011		Increase(+) or Decrease(-) for FY 2011

### III. Current Services Program Description by PPA

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Management and Administration:  
Program Performance Justification**  
(Dollars in Thousands)

**PPA: Management and Administration:**

	<u>Perm. Pos</u>	<u>FTE</u>	<u>Amount</u>
<b>2009 Actuals</b>	<b>123</b>	<b>114</b>	<b>34,153</b>
<b>2010 Enacted</b>	<b>130</b>	<b>130</b>	<b>38,500</b>
2011 Adjustments-to-Base	(12)	(12)	(2,607)
<b>2011 Current Services</b>	<b>118</b>	<b>118</b>	<b>35,893</b>
2011 Program Change	8	4	1,099
<b>2011 Total Request</b>	<b>126</b>	<b>122</b>	<b>36,992</b>
Total Change 2010 to 2011	(4)	(8)	(1,508)

DNDO requests 126 positions, 122 full time equivalents (FTE), and \$36.992 million for FY 2011. This is a decrease of \$1.508 million from FY 2010 Enacted.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Management and Administration (M&A) appropriation funds the administration of the Domestic Nuclear Detection Office.

The M&A request provides for the execution of salaries, benefits, and expenses related to 126 positions and 122 FTE, a net decrease of 4 permanent positions and 8 FTE from the FY 2010 Enacted Appropriation

M&A provides for the management and administrative support of DNDO's mission and includes all costs related to Federal personnel including salaries and benefits for DNDO staff, including detailees from other Federal agencies such as The Department of Energy, Federal Bureau of Investigations, the United States Air Force, United States Coast Guard, and others. The M&A appropriation provides funding that assists in the achievement of DNDO's mission through the following departments within the Office of the Chief of Staff: Information Technology (IT); Executive Secretariat; Security; Human Resources (HR); and Resources. Additionally, funds are provided to the DHS Working Capital

Fund, which provides such services as Rent, the Office of Procurement Operations, and IT infrastructure support.

M&A provides for the management and administrative support of Directorates operating within the organizational structure of DNDO including the Mission Management Directorate (MMD), Architecture Directorate (AD), Systems Engineering and Evaluation Directorate (SEED), Product Acquisition and Deployment Directorate (PADD), Operations Support Directorate (OSD), and the National Technical Nuclear Forensics Center (NTNFC). The mission of each Directorate includes:

- **MMD.** The mission of MMD is to identify, coordinate and prioritize programs across DNDO that meet the needs and enhance the capability of stakeholders, thereby reducing the risk of radiological/nuclear (rad/nuc) terrorism.
- **AD.** The Architecture Directorate, in cooperation with DNDO's intra- and interagency partners, develops time-phased strategies and plans for improving the probability of detecting and preventing nuclear and radiological attacks.
- **SEED.** The Systems Engineering & Evaluation Directorate ensures that DNDO proposes sound technical solutions and thoroughly understands systems performance and potential vulnerabilities prior to deploying those technologies.
- **PADD.** The Product Acquisition & Deployment Directorate carries out the engineering development, production, developmental logistics, procurement and deployment of current and next-generation nuclear detection systems in support of an end-user community that includes other Department of Homeland Security (DHS) components including Customs and Border Protection (CBP), U.S. Coast Guard (USCG) and Transportation Security Administration (TSA).
- **OSD.** In support of DNDO's Strategic Objectives, the Operations Support Directorate develops the information sharing and analytical capacity necessary to create a fully integrated operating environment. OSD also conducts training, exercises, outreach and technical assistance in support of preventive radiological and nuclear detection programs.
- **NTNFC.** The NTNFC was tasked with two core missions: to provide national-level integration, centralized planning and stewardship for the TNF community; and to lead the U.S. government in establishing a robust and enduring pre-detonation radiological/nuclear materials forensics capability.

## IV. Program Justification Changes

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Management and Administration:  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 1:** Personnel for Program Oversight and Technical Exec  
PPA: Management and Administration:  
Program Increase: Positions 8.0, FTE 4.0, Dollars \$1,099.0

<b>Total Request</b>	-	-	<b>34,153</b>	-	-	<b>38,500</b>	<b>126</b>	<b>122</b>	<b>36,992</b>

Description

This request will provide funding for the necessary staff to manage additional research and development programs.

Justification:

FY 2010 funding includes support for 130 FTE and 130 FTP. The transfer of the Transformational Research and Development (TAR) program to the Science and Technology Directorate includes the transfer of 12 FTE/FTP. Separate from that transfer is an additional request of 8 additional FTP and 4 additional FTE for increased program oversight. This results in a net decrease of 8 FTE and 4 FTP from FY 2010 to FY 2011.

As DNDO continues to look beyond containerized cargo and other established mission areas, diverse solutions will be continually developed requiring a managed growth of personnel to maintain proper oversight and effective program management.

A shift of emphasis beginning in FY 2010 will result in increased architectural studies and analysis in support of the Global Nuclear Detection Architecture (GNDA). As a result of this shift, additional FTP are required to work toward continued assessment of the rad/nuc risk and the associated gaps in the GNDA.

As DNDO has matured its technical programs, the Business and Finance Office has been improving its ability to provide internal controls guidance, fiscal accountability, and transparency. To ensure a framework of sound financial management additional

resources are requested to provide improvements in financial management operations.

Historically, DNDO has averaged a retention rate of over 92% of our career professionals. This stability in the workforce supports our confidence that we will both achieve and maintain our staffing strength. This request represents a realistic plan to achieve original staffing goals for DNDO.

Impact on Performance

The additional staff requested will help perform vital mission support roles that will allow DNDO to better perform its mission to protect the Nation from illicit radiologic and nuclear material.

## V. Exhibits and Other Supporting Materials

### **A. Justification of Proposed Legislative Language**

For salaries and expenses of the Domestic Nuclear Detection Office and for management and administration of programs and activities [\$38,500,000] \$36,992,000. Provided, that not to exceed \$3,000 shall be for official reception and representation expenses.

*(Department of Homeland Security Appropriations Act, [2010] 2011)*

### PPA Mission Statement

Under the direction of NSPD-43/HSPD-14, the mission of Domestic Nuclear Detection Office (DNDO) is to address the broad spectrum of radiological and nuclear protective measures through the development of the global nuclear detection architecture; the deployment of the domestic detection system to detect and to report attempts to import or to transport a nuclear device or fissile or radiological material intended for illicit use; the coordination of nuclear detection research and development on a government-wide scope; and the establishment of procedures and training for the end users of the deployed equipment.

The Management and Administration (M&A) appropriation provides for the management and administrative support of that goal. M&A includes all costs related to Federal personnel, including detailees from other organizations. The M&A appropriation accounts for the funding that assists in the achievement of DNDO's mission through the maintenance of an operations level that provides facilities, supplies and materials, IT equipment and administrative support. DNDO's contributions to the DHS Working Capital Fund (WCF) are included within the M&A request.

## Summary Justification and Explanation of Changes

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
<b>11-13 Total FTE &amp; personnel compensation and Benefits</b>	14,174	18,,977	18,343	(495)

Salaries and Benefits includes costs for 122 FTE. The FY 2011 request is \$18.343 million which is a decrease of \$0.634 million for personnel compensation and benefits.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
<b>21.0 Travel and transportation of persons</b>	44	45	40	(5)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2011 request is \$0.040 million which is a decrease of \$0.005 million from the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
<b>22.0 Transportation of things</b>	-	10	10	-

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2011 request of \$0.010 million is the same as the FY 2010 Enacted Appropriation. The funding will be used to finance the transportation of furniture and other household goods associated with the rotation of overseas employees and the permanent change of station or relocation of domestically based DHS federal employees.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
<b>23.3 GSA Rent</b>	4,430	4,131	5,722	(1)

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2011 request is \$5.722 million which is an increase of \$1.591 million above the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
23.3 Communications utilities and miscellaneous charges	210	28	27	(1)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2011 request is \$0.027 million which is a decrease of \$0.001 million from the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
24.0 Printing and reproduction	-	12	11	(1)

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2011 request is \$0.011 million which is a decrease of \$0.001 million from the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.2 Other services	875	875	799	(76)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2011 request is \$0.799 million which is a decrease of \$0.076 million from the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.3 Purchases of goods & svcs. from Gov't accounts	13,773	13,775	11,467	(2,308)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2011 request is \$11.467 million which is a decrease of \$2.308 million from the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.4 Operation and maintenance of facilities	101	101	101	-

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2011 request of \$0.101 million is the same as the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.7 Operation and maintenance of equipment	62	62	62	-

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2011 request is \$0.062 million which is the same as the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
26.0 Supplies and materials	263	263	260	(3)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2011 request is \$0.260 million which is a decrease of \$0.003 million from the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
31.0 Equipment	221	221	150	(71)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2011 request is \$0.150 million which is a decrease of \$0.071 million from the FY 2010 Enacted Appropriation.

## BUDGET REQUEST AND SUPPORTING INFORMATION

### Research, Development, and Operations:

## I. Appropriation Overview

### A – Mission Statement for Research, Development, and Operations:

The mission of the Department of Homeland Security's (DHS) Domestic Nuclear Detection Office (DNDO) is to improve the Nation's capability to deter, detect and report attempts to import, possess, store, develop, or transport nuclear or radiological material for use against the Nation, and to further enhance this capability over time. DNDO was established by National Security Presidential Directive (NSPD)-43 and Homeland Security Presidential Directive (HSPD)-14 to provide a focal point addressing the broad spectrum of radiological and nuclear (rad/nuc) protective measures. Title V of the SAFE Port Act of 2006 (P.L. 109-347) directs DNDO to "serve as the primary entity of the United States Government (USG) to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop, or use an unauthorized nuclear explosive device, fissile material, or radiological material in the United States, and improve that system over time." DNDO is responsible for the engineering development of current and next generation of nuclear detection systems (and associated materials development and facilitation). DNDO is also responsible for integrating, advancing, and stewarding national nuclear forensics capabilities amongst the Departments of Defense, Energy, Justice State, Homeland Security and the Intelligence Community.

DNDO has organized the majority of its development, test, evaluation, and acquisition programs into four mission areas. At the foundation of this mission space construct is the Global Nuclear Detection Architecture (GNDA) delineation of geographic layers (exterior, border, interior, and crosscutting) and threat pathways (air, land, and sea). DNDO works closely with Federal, State, and local entities with the primary operational responsibility for each pathway or within each layer to forge a more effective linkage between their user requirements and DNDO's technology and operational capability development efforts. The four mission areas to which DNDO has aligned activities, and the scope of activity addressed by each mission area, are described below:

The *land borders mission area* encompasses all official road and rail ports of entry (POEs), as well as land border checkpoints and illicit traffic between the official POEs. Road POE rad/nuc scanning focuses on cargo, pedestrians, and privately-operated vehicles (POVs). Current international rail efforts will address the scanning of cargo.

The *aviation mission area* addresses all threat pathways involving civil air transport – both commercial operations and general aviation. Rad/nuc threats may be transported via air as a prelude to an attack elsewhere, or the actual attack involving a rad/nuc threat device may be executed and delivered directly by air. Rad/nuc detection capabilities address the scanning of air cargo, aviation passengers and their baggage, as well as the aircraft and crew.

The *maritime mission area* addresses the scanning of people, cargo, vessels, and other conveyances at seaports of entry and on seas, oceans, or other navigable waterways within U.S. Federal, State, local and tribal law enforcement jurisdiction. All vessels, including container ships, commercial fishing boats, tug boats, barges, commercial tour boats, cruise ships, tankers, bulk cargo ships, and privately owned/operated pleasure craft and sailboats, within the defined maritime domain may be exploited by terrorists to transport illicit rad/nuc material.

The *interior mission area* comprises all detection opportunities within U.S. borders. The risk to metropolitan urban areas and critical infrastructure is reduced through facilitated build out of relevant Preventive Rad/Nuc Detection (PRND) programs, which are coordinated with State and local partners

Further, in its *cross cutting function support* role, DNDO directly interfaces with Federal, State, and local stakeholders to gather rad/nuc technology and operational capability requirements and provide these requirements to the transformational research within S&T and systems development and operations support activities within DNDO. Once these systems are deployed, DNDO provides ongoing, centralized alarm adjudication and information sharing services.

DNDO is committed to ongoing interaction with Federal, State, and local groups across the full range of systems development efforts, which include all necessary systems engineering and test and evaluation needs. In addition, DNDO will develop training and exercises specific to user groups, their operations, and relevant technologies. As a complement to the activities of these mission areas, DNDO will continue a full range of mission support efforts such as systems engineering, test and evaluation infrastructure, red teaming and net assessments, architecture studies, and operations support activities, including technical reachback.

Finally, the National Technical Nuclear Forensics Center (NTNFC) provides the technical capability to determine the origin and nature of nuclear or radiological attacks, interdicted source materials and devices to support national priorities for deterrence, attribution and prosecution.

The Research, Development, and Operations (RD&O) request identifies resources required for research, systems development, and all required mission and operations support activities.

## **B – Budget Activities:**

### **Systems Development:**

DNDO Systems Development programs serve as the rad/nuc detection product improvement component within DNDO, taking concepts for new detection systems from exploratory (or long-range) research into a level of maturity sufficient for production and

deployment. Typically, DNDO will take a proven technology and explore various mission requirements that could be applicable to current vulnerabilities identified in the GNDA, including identifying potential end uses. Systems Development activities include engineering development and all developmental logistics elements associated with current as well as next generation of nuclear detection systems. The long range research activities will be done through the transformational research activities that are being transferred to S&T. These activities will directly feed the development activities detailed here. Present product lines include radiation portal monitors (and associated materials development and facilitation), radiography (which includes non-intrusive inspection, or NII), and human portable systems.

Near-term priorities for Systems Development are:

- Utilize proven technology to improve the current generation of human-portable and mobile rad/nuc detection systems to further the capabilities at our Nation's borders and airports
- Utilize proven technology to improve the detection capability of radiography systems to automatically identify materials that could be used to shield special nuclear materials.
- Advance the technical maturity of emerging technologies to passively detect rad/nuc threats from a stand-off distance (up to 100 meters).
- Advance efforts to develop a rad/nuc scanning capability to address cargo entering the country from Canada and Mexico via rail.
- Develop and implement, at seaport terminals that have on-dock rail transfer capabilities, technologies to scan cargo that is transferred directly from ship to rail and exits the terminal by train.
- Develop and evaluate boat-mounted rad/nuc detection technologies to address the "detection at sea" mission.

### **Transformational Research and Development:**

The FY 2011 President's Budget transfers DNDO's Transformational Research and Development (TAR) program to the DHS Science and Technology Directorate. This move will further consolidate R&D across the Department within the Science and Technology Directorate. Additional information on the TAR program will be included in the Congressional Justification for the Science and Technology Directorate.

### **Assessments:**

The DNDO capability development process is anchored by a critical assessment of technologies as they are, deployed, and implemented, as well as a continual assessment of the Global Nuclear Detection Architecture, through a variety of means. Development and acquisition programs are supported by test and evaluation (T&E) campaigns to characterize technologies and systems, red teaming assessments to deepen the understanding of adversary capabilities, and net assessments to identify the effectiveness of the planned and deployed GNDA.

In addition to the above activities, DNDO executes pilots – activities planned as operational tests or trials that serve as a tentative model for future development or deployment decisions. While DNDO’s aforementioned test campaigns are intended to evaluate the technical performance of detection technologies in controlled environments, pilot programs allow DNDO to conduct limited deployments of new concepts of operation (CONOPS) or emerging rad/nuc detection technologies in existing operational environments, or alternately, existing CONOPS or technologies in new operational environments. These pilots provide an assessment of the processes, equipment, and/or systems to support preventive rad/nuc detection (PRND) mission objectives and customer/stakeholder requirements. Pilots are a tool for DNDO to identify and leverage lessons learned that will reduce the risk of full scale deployments, enhance the impact of limited and competing resources, and expedite the deployment of the GNDA, thereby increasing the Nation’s ability to respond to the rad/nuc threat. In addition, DNDO has established the Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER), a program to ensure independent and consistent testing of radiation detectors is performed by accredited laboratories.

Near-term priorities for Assessments are:

- Conduct Net Assessments and Red Teaming evaluations that enable DNDO programs to enhance the integration of international, Federal, State, tribal, local, first responders, and other mission partners with DNDO PRND efforts.
- Having completed the Rad/Nuc Countermeasures Test and Evaluation Complex (RNCTEC) facility in FY 2009, conduct RNCTEC operational and management activities following startup completion.
- Retain radiation experts to assist in test planning and analysis and to ensure independent and technically defensible T&E campaigns.
- Conduct T&E activities each year to support each DNDO mission area, and sustain testing infrastructure at the testing sites as required.
- Pilot emerging technical and operational solutions to enduring vulnerabilities in the GNDA.

### **Operations Support:**

DNDO operations support efforts enhance DNDO’s situational awareness of the rad/nuc landscape and the GNDA, while directly facilitating the technical adjudication of rad/nuc incidents. Through these activities, DNDO provides actionable analytical and intelligence assessment products for operational decision makers. DNDO also works directly with law enforcement and other Federal partners to determine indicators of nuclear terrorism to recommend appropriate response, including interdiction. Additionally, DNDO develops and maintains information sharing capabilities and analytical tools necessary to create an integrated operating system to be used by Federal, State, local, and tribal law enforcement agencies, as well as the larger intelligence and counterterrorism communities. OSD rounds out its support to state and local entities through a training and exercise program tailored to the needs of the community.

A central operations support capability is the Joint Analysis Center (JAC), a 24/7 DNDO information and analysis hub that provides for situational awareness of the deployed nuclear detection architecture, rapid information reporting, and facilitation of technical support for alarm adjudication and resolution. The JAC relies on the Technical Reachback Program (TRB) to provide expert advice and analysis in support of detection operations and the Nuclear Assessment Program (NAP) to maintain awareness of the nuclear threat and illicit trafficking and to support the Federal government with rapid analysis of communicated threats. While these operations support activities require DNDO to closely interact with the Intelligence Community, DNDO does not act as an intelligence collection agency. In addition, DNDO does not provide command or control functions over detection and response assets, but provides critical support to entities which have these responsibilities and authorities.

Near term priorities for Operations Support are:

- Maintain situational awareness of the GNDA.
- Analyze information from the GNDA and share data with the Community(ies) of Interest to make the GNDA more effective.
- Ensure that detection leads to an appropriate response by local or Federal law enforcement fire and other public safety operations.
- Conduct engagements with State and local communities to increase awareness, partnerships, and capabilities.
- Build the appropriate support infrastructure and capabilities for State, local, and other Federal partners. Existing foundational programs, such as training, exercises, and facilitated on-site program assistance will be expanded to include a broader range of customers, evolving risks and vulnerabilities, technologies, and proven operational concepts.
- Complete the initial operating capability of the JAC Collaborative Information System (JACCIS).

### **National Technical Nuclear Forensics:**

Nuclear forensics is one of the three critical pillars along with intelligence and law enforcement investigations, that supports the USG ability to attribute the source of nuclear material. In the event of a rad/nuc incident or interdiction in the United States, the technical questions raised during an investigation are addressed through nuclear forensics.

Current nuclear forensics capabilities are built upon a foundation from the Cold War, which addressed nuclear weapons development and testing, arms control monitoring, and intelligence activities. The imperative to modernize and advance these capabilities came into sharp focus after the 9/11 attacks. Nuclear forensics, in response to a disrupted or actual attack, will be called upon to help answer the urgent questions about the nature, provenance and source of materials and devices, reducing uncertainties, and reducing the time required to reach technical conclusions. In order to address this threat, the Presidential Directive, “National Technical Nuclear Forensics,” was issued which

established roles and responsibilities of six Federal organizations. The Secretary of Homeland Security was directed to establish the NTNFC within DNDO. Nuclear forensics priorities are focused on technological advances, international cooperation, interagency integration, and exercising and evaluating to assure readiness.

At the same time, the strategic landscape is in a state of flux, directly impacting the nuclear forensics community. The nuclear weapons complex, which provides most of the facilities and expertise that are leveraged for NTNFC, is being reduced, and many of the senior experts are either retiring or moving on to other career paths. Furthermore, the academic pipeline that would provide the next generation of nuclear experts has withered and is currently in a state of extremis. Hence, DNDO is aggressively pursuing improvements to the expertise pipeline with synchronized programs encompassing the DNDO mission space for nuclear detection and forensics.

Within the forensics landscape, DNDO is striving to advance the technical capabilities, integrate the partner agencies, and restore the academic pipeline to ensure an enduring national capability. In order to accelerate accomplishment of these goals, DNDO is planning to continue increasing its focus and resources in the nuclear forensics program in FY 2011. This will serve to not only more rapidly address the scientific challenges to improve pre-detonation materials forensics technology capabilities, but at the same time to continue expanding our efforts to restore the nuclear forensics expertise pipeline, across the spectrum from the most junior (e.g., student internships fellowships, and retaining/recruiting new faculty) to the most senior (e.g., engaging and retaining the expert laboratory forensic scientists through a stable and sufficient R&D program). The expertise pipeline program relies on a measured approach, building on the initial program base and gauging performance in step with the expansion.

Near term priorities for National Technical Nuclear Forensics are:

- Accelerate the development and advancement of technological capabilities to perform nuclear forensics on pre-detonation rad/nuc materials with a focus on transition of validated methodologies into operational use, the discovery of new material signatures, and the development of new tools, models and methods to evaluate forensic data.
- Foster and advance a fully integrated interagency NTNFC enterprise by leading joint planning activities to include a senior level Steering Committee, Executive Council, Joint Program Review teams, and leading interagency exercises and corrective actions follow-up activities.
- Expand and direct essential activities to reinvigorate university programs, faculty and students in nuclear forensics-related specialties, while restoring the national laboratory expertise pipeline and workforce to include summer internships, undergraduate opportunities, Ph.D. student fellowships, post-doctoral fellowships, and university research programs and faculty awards.
- Advance established international partnerships in nuclear forensics and develop new cooperative relationships working closely with the State Department, the Department of Energy and NTNFC partner agencies through initiatives such as the

Global Initiative to Combat Nuclear Terrorism, the International Technical Working Group on Nuclear Smuggling, and the international nuclear forensics Model Action Plan

**Systems Engineering and Architecture:**

All programs and mission areas require the implementation of a strong and disciplined systems engineering approach. Systems engineering is integral to program support, and includes areas such as risk management, configuration control, requirements development, and technical evaluation and analysis. Systems engineering is also a key component of test and evaluation efforts, providing the bases for the development of test strategies and plans, generation of test requirements, selection of appropriate test venues and equipment, support of test implementation, and reporting of test results. Additionally the development of detection technology standards is included in this program to set the goals for the technology performance.

At the core of all DNDO activities is the systems architecture function: determining gaps and vulnerabilities and then formulating recommendations and plans to mitigate the same. By intensively studying the multi-layered structure of the rad/nuc detection architecture, a well-defined and carefully coordinated network of interrelationships is understood and developed.

The Joint Annual Interagency Review of the Global Nuclear Detection Architecture (GNDA) gives rise to critical projects across all DNDO mission areas and the U.S. Government. DNDO Systems Architecture efforts are focused on developing an enhanced GNDA, including both domestic and international components. The global architecture comprises several key elements: a multi-layered structure of rad/nuc detection systems, deployed both domestically and overseas; a well-defined and carefully coordinated network of interrelationships among them; and a set of systems engineering-based principles and guidelines governing the architecture's design and evolution over time.

Near-term priorities for Systems Engineering and Architecture are:

- Develop Technical Capability Standards for handheld, transportable, and mobile rad/nuc detection equipment.
- Participate in the development of national and international standards for rad/nuc detection equipment.
- Complete an overarching strategic plan for the development of the GNDA and continually update the architecture gap and risk analyses.
- Expand architecture studies to a broader range of potential pathways and identify solution options for enduring vulnerabilities in the GNDA.

**C – Budget Request Summary:**

The Domestic Nuclear Detection Office requests \$207.828 million for FY 2011 Research, Development, and Operations, a decrease of \$116.709 million below the FY 2010 Enacted Appropriation.

## II. Summary of FY 2011 Budget Estimates by Program/Project Activity (PPA)

<b>2011 Total Request</b>	-	-	<b>38,833</b>
Total Change 2010 to 2011	-	-	13,385

DNDO requests \$38.833 million for this activity. There is an increase of \$13.385 million above the FY 2010 Enacted Appropriation for additional engineering and architectural studies.

#### **CURRENT SERVICES PROGRAM DESCRIPTION:**

The DNDO systems engineering and architecture programs are (1) developing, implementing, and supporting a disciplined systems engineering approach throughout DNDO, and (2) enhancing the Global Nuclear Detection Architecture (GNDA), including both domestic and international components.

**Systems Engineering Program:** DNDO relies on a disciplined systems engineering approach to achieve successful implementation of an integrated and balanced global nuclear detection solution. DNDO's systems engineering program provides integral support to program areas and establishes and documents clear and measurable rad/nuc detection and identification requirements. This function, supporting all of DNDO with crosscutting activities, provides the discipline of the engineering process and ensures integrity of proposed new systems. This crosscutting activity acts as a base for the air, maritime, land-border, and interior pathways, as well as for the GNDA as a whole.

Developing radiation detection standards at the national and international levels is also a key focus area.

#### **Accomplishments in Systems Engineering and Architecture – Systems Engineering:**

Significant accomplishments in FY 2009 include:

- Assisted Mission Area Managers in development Mission Need Statements and CONOPs, and identified deployment requirements and critical operational issues for rad/nuc detection systems.
- Assisted the programs by conducting analyses of the operational effectiveness, suitability, and life-cycle cost of numerous conceptual solutions to the rad/nuc detection problem to identify the most promising options.
- Established performance requirements for developmental testing and evaluation (DT&E) of required systems.
- Provided systems engineering support to DNDO product lines.

FY 2010 planned accomplishments:

- Lead the DNDO systems engineering efforts to comply with the Systems Engineering Life Cycle recently established by interim DHS Acquisition Directive 102-01.
- Modify existing systems engineering processes and products as necessary to support the evolving DNDO Solution Development Process in accordance with DHS Acquisition Directive 102-01.
- In support of Mission Area Managers, Lead Analysis of Alternatives (AoA) studies to identify rad/nuc detection requirements in the Land Border, Interior, Aviation, and Maritime Mission Areas.

FY 2011 planned accomplishments:

- Leading an institutionalized DNDO-wide systems engineering process, assist DNDO programs as they progress in a disciplined and documented Systems Engineering Life Cycle.

**Standards Program:** There are two types of standards: consensus based developed by the technical community including commercial vendors and Technical Capability Standards which are government unique standards. Pursuant to the SAFE Port Act of 2006, DNDO is responsible for developing Technical Capability Standards for non-intrusive imaging and radiation detection systems. The objective of the DNDO Standards Program is to ensure all radiation detection standards are based on the threat, as it is understood. By adopting a threat basis for standards the Standards Program directly or indirectly supports all DNDO programs for acquisition, research and development.

Initial standards will be government-unique and will use classified information on rad/nuc threats as a basis. The intent is to develop a technical capability standard for each category of detection systems. As appropriate, the program will then support the modification of existing consensus standards to include the government-unique standard information. The Technical Capability Standard will also provide a basis for DNDO to work with the Department of Energy's (DOE) National Nuclear Security Administration

(NNSA) to develop unclassified test objects that are consistent with the threat-based requirements. In collaboration with the National Institute of Standards and Technology (NIST), DNDO has formed an interagency working group and commenced work on developing Technical Capability Standards.

In addition to having responsibility for the Technical Capability Standards, DNDO is responsible for supporting the development of national and international rad/nuc detection consensus standards. The DNDO consensus standards program will:

- Review present standards for currency and revision as needed and identify those areas requiring development of new standards.
- Provide the support needed to maintain the current Internet access to rad/nuc American National Standards Institute (ANSI) standards under DNDO responsibility.
- Support U.S. participation at related international standards development meetings to ensure U.S. concerns are represented in the international community, and that U.S. standards reflect existing international efforts.

DNDO also provides systems engineering and evaluation support to specific DNDO programs in areas such as standard systems engineering documentation, adaptation of concepts of operations (CONOPS), systems capabilities matrices, and test campaigns. These systems engineering activities are included in the Systems Development PPA as a part of the programs that receive this support.

#### Accomplishments in Systems Engineering and Architecture - Standards:

Significant accomplishments in FY 2009 include:

- Achieved interagency concurrence on a Technical Capability Standard for handheld rad/nuc detectors.
- Created a working group to update the ANSI N42 rad/nuc data format standard.

FY 2010 planned accomplishments:

- Achieve interagency concurrence on Technical Capability Standards for transportable and mobile radiation detection systems and for radiation detection portal monitors.
- Publish an interagency threat-based Technical Capability Standard for handheld instruments used for detection.

FY 2011 planned accomplishments:

- Complete interagency coordination and publish a DHS threat-based Technical Capability Standard for transportable and mobile radiation detection systems.
- Develop a draft, threat-based Technical Capability Standard for rad/nuc detection by non-intrusive imaging systems.

**Systems Architecture:** DNDO develops time-phased strategies and plans for improving the probability of detecting and interdicting rad/nuc attacks. Plans are developed jointly with DNDO's intra- and interagency partners and in close coordination with relevant DNDO offices. These plans are focused on addressing the most important gaps in the existing GNDA. Studies and analyses are performed to characterize the gaps, identify options, evaluate the advantages and disadvantages of alternative solutions, and formulate time-phased plans for reducing risk. The time-phased aspect of the plans is important because it allows for the integration of current and near-term technologies and approaches, as well as longer-term options that may draw upon technologies that are currently in the R&D phase that may not be available for implementation for several years.

The global architecture comprises several key elements: a multi-layered structure of rad/nuc detection systems (deployed both domestically and overseas), a well-defined and carefully coordinated network of interrelationships among them, and a set of systems engineering based principles and guidelines governing the architecture's design and evolution over time. The architecture will continue to assess threats by mission areas.

The principal focus of DNDO's systems architecture efforts since FY 2006, when the initial baseline architecture analysis was completed, has been to identify ways to address the largest gaps in the border layer—namely, air, maritime, and land pathways between designated ports of entry (POEs)—and gaps in the interior layer. These efforts are summarized in the accomplishments by fiscal year. An overarching strategic plan for addressing gaps and monitoring progress across the entire GNDA will be developed in FY 2009 and FY 2010. Architecture work will continue in four areas: International Architecture; Border Layer; Interior; and Modeling, Crosscutting Studies and Analyses. The International Architecture area will support international programs such as the Global Initiative to Combat Nuclear Terrorism (GICNT) and the Security and Prosperity Partnership (SPP) to identify and encourage best practices for rad/nuc detection architectures. In addition, the GICNT will encourage regional architectures and conduct analyses of appropriate CONOPS or particular regions. The Border Layer will continue to support analyses of detection strategies between the POEs and remaining vulnerabilities at POEs, as well as modeling and risk assessments focused on characterizing the threat and identifying opportunities for detection and interdiction at the border. Emphasis will be placed on the land border (to include rail pathways), air pathways, and the maritime border. The Interior area will continue to develop approaches to detection and interdiction appropriate for metropolitan areas, special events, and domestic pathways. In addition, DNDO is leading an interagency effort to increase the public's awareness of the risks, consequences, and appropriate responses related to an attack using a radiological dispersal device (RDD). The Modeling, Crosscutting Studies, and Analyses area will be responsible for the Annual Report to Congress as well as overarching risk analyses and detection modeling such as the bi-annual risk analysis to support medical countermeasure planning and the detection architecture risk assessments. This area will support architecture documentation development and will provide systems architecture support (for items such as the

standardization of data exchange and functional requirements) as necessary. The GNDA strategic plan will continue to be updated and enhanced.

#### Accomplishments in Systems Engineering and Architecture - Core:

Significant accomplishments in FY 2009 include:

##### International Architecture:

- Completed and published GNDA model guidelines document (and associated maritime guidelines “annex”) supporting the GI.
- Initiated planning and implementation of an engagement strategy for regional rad/nuc architectures for key international regions.
- Conducted international country and regional studies that outline the characteristics and potential vulnerabilities of a country’s or region’s rad/nuc capabilities. Emphasis was placed on bilateral and multilateral technical workshops and exchanges to help countries and regions develop and implement effective rad/nuc architectures.
- Strengthened neighboring countries’ maritime borders by supporting a bilateral rad/nuc detection capability-building program with Mexican Customs and other Mexican organizations, to include equipment, training, protocols, technical reachback, and exercises.
- Formalized relationship with United States Northern Command (NORTHCOM) to enhance both the domestic architecture as well as leverage NORTHCOM’s relationships with Canada and Mexico.
- Initiated a systematic framework for engagement planning and execution with foreign (e.g., North American, European, Central and South Asian, North Pacific Rim, Wider Caribbean Region, and Southeast Asian) partners on establishing regional rad/nuc detection architectures. Develop international engagement “annexes” for both the maritime and aviation pathways.

##### Modeling, Crosscutting Studies and Analysis:

- Completed the 2009 Joint Annual Interagency Review of the GNDA, including GNDA Program/Budget Crosscut.
- Developed a framework for overarching strategic plan for the GNDA.
- Began the second edition of risk assessment of architectures based on results from FY 2007 and FY 2008 studies.
- Continued detection modeling research and analysis.
- Continued work on data fusion and analysis in support of various operational programs.
- Developed a rad/nuc Detection Operational Concept and a rad/nuc Detection Capability Document that was prepared in accordance with the general format specified by DoD’s Joint Capabilities Integration Development System (JCIDS).

FY 2010 planned accomplishments:

International Architecture:

- Continue to strengthen United States maritime borders in partnership with Canada and Mexico including joint work on training and exercise plans, reachback, and information sharing agreements.
- Continue to support the bilateral rad/nuc detection capability-building program with Mexican Customs and other Mexican organizations.
- Continue engagement with foreign partners on establishing regional rad/nuc detection architectures.
- Expand relationship with NORTHCOM to enhance both the domestic architecture as well as leverage NORTHCOM's relationships with Canada and Mexico.

Modeling, Crosscutting Studies and Analysis:

- Complete the 2010 Joint Annual interagency review on the GNDA including the Program/Budget Crosscut.
- Work with DHS S&T Directorate to complete the second edition of the HSPD-18 risk analysis for medical countermeasures.
- Complete the GNDA Strategic Plan and supporting analysis.
- Complete the second edition of the risk assessment of the architecture building on results from FY 2007 through FY 2009.
- Continue detector fusion and algorithm development for a range of fixed and mobile detectors.

FY 2011 planned accomplishments:

International Architecture:

- Conducted international outreach of preventive rad/nuc detection (PRND) and the GNDA. Continue work on the Model Guidelines Document and outreach programs as well as continued regional- specific architectural analysis of PRND schemes. (e.g., Pacific Rim, Southeast Asia).

Modeling, Crosscutting Studies and Analysis:

- Commence foundational studies on the application of PRND capabilities, including whether to employ 100% or randomized screening concepts.
- Further develop the risk methodology and investigate risk buy-down for the various inputs to the GNDA.
- Develop the Annual Architecture report and yearly GNDA evaluation.
- Continued Detector Operational Modeling to support detector deployment in various environments.

Guided by the GNDA, DNDO provides support relative to the assessment and mitigation of threats in the land borders, aviation, maritime and interior mission areas, such as the development of specific architecture studies, CONOPS analyses, detector modeling studies, and enterprise architecture support that are specific to each mission area. These studies will typically be focused on specific programs and will directly support DNDO pilot and R&D initiatives. In general, mission areas will commission architecture studies to identify and characterize trade-offs, risks and costs before deciding on a specific implementation paths. These preliminary studies are intended to reduce the technical and programmatic risk of new efforts and enhance their integration and interoperability with the overall GNDA.

Accomplishments in Systems Engineering and Architecture - Land Borders Mission Area:

Significant accomplishments in FY 2009 include:

- Initiated a study of the feasibility of using unattended ground sensors for PRND along the U.S.–Mexico border between POEs.
- Conducted analysis of Pedestrian and Baggage operations to support anticipated future requirements for rad/nuc screening.
- Conducted analysis of Transitory Checkpoint Capabilities to support anticipated future requirements for rad/nuc screening.

FY 2010 Planned Accomplishments:

- Investigate other types of radiation detectors that might be suitable for use at Customs and Border Protection (CBP) Office of Border Patrol (OBP) checkpoints.
- Conduct extended evaluations (3 months in duration) at three OBP checkpoints to assess the efficacy of pedestrian portals and their impact on BP operations.
- Complete an International Rail Threat and Gap study to determine the most promising rad/nuc detection architecture for rail traffic coming into the United States from Canada and Mexico.
- Complete the modeling of the most promising architecture identified in the above Threat and Gap study.
- Conduct top-down analysis of land border POEs to assess the efficacy of existing and proposed rad/nuc detection architectures.
- Conduct an analysis of the technology requirements necessary to achieve optimized rad/nuc detection architecture at land border POEs.

FY 2011 Planned Accomplishments:

- Complete threat and gap analysis for land borders.
- Continue to investigate other types of radiation detectors that might be suitable for use at OBP checkpoints.

## Accomplishments in Systems Engineering and Architecture - Aviation Mission Area:

Significant accomplishments in FY 2009 include:

- Performed systems architecture analyses to enable CBP to more effectively perform the rad/nuc screening mission in the International General Aviation (IGA) environment.
- In close coordination with CBP, Transportation Security Administration (TSA), and other operating agencies and stakeholders, perform systems architecture analysis studies of various rad/nuc screening equipment suites and CONOPS variants to introduce rad/nuc screening into the international commercial aviation environment.
- Developed a guidelines document for rad/nuc scanning in the IGA environment for use in international engagements.

FY 2010 Planned Accomplishments:

- Conduct an updated analysis of rad/nuc scanning capabilities for general aviation at overseas points of departure, including CBP pre-clearance locations.
- Conduct an updated analysis of pre-clearance scanning of general aviation at overseas points of departure and domestic aviation architectures.
- Conduct a study of the gaps related to detection capabilities for international aviation traffic transiting into the United States from private or non-commercial airports outside the continental United States.
- Conduct a Risk-based Study of Characteristics of Non-Compliant GA Aircraft to examine the characteristics associated with the same non-compliant aircraft in terms of relative threat likelihoods, behaviors, patterns, and overall operational scenarios.

FY 2011 Planned Accomplishments:

- Initiate study to evaluate the feasibility of pre-clearance sites to include Megaports for Air capability (expanded to include potential enhanced cargo and IGA scanning operations).
- Complete additional studies and gap analyses to inform the overall IGA Security Strategy; including a gap analysis associated with IGA aircraft originating in Caribbean and along the northern U.S. border.
- Conduct a Risk-based Study of Characteristics of Non-Compliant GA Aircraft to examine the characteristics associated with non-compliant aircraft in terms of relative threat likelihoods, behaviors, patterns, and overall operational scenarios.
- Develop interim surveillance options to enhance detection and interdiction of non-compliant IGA aircraft.

## Accomplishments in the Systems Engineering and Architecture - Maritime Mission Area:

Significant accomplishments in FY 2009 include:

- Partnered with the USCG to fully develop rad/nuc scenarios into the USCG Maritime Security Risk Analysis Model (MSRAM).
- Analyzed and developed PRND architecture options for various vectors, which included: tug and barge, inland waterways, off-shore secondary screening, passenger/vehicle vessels, and cruise ships.
- Completed an International maritime pathways execution plan.
- Completed a maritime architecture study to analyze and develop options for non-container vectors (bulk, break bulk, roll-on/roll-off, tanker).
- Completed an architectural study of the maritime domain in the Great Lakes region to lay the ground work for enhancing the layered detection capability along this significant maritime border.
- Initiated an architectural study that analyzes solutions for underwater detection against smuggling illicit materials via unconventional submersible, semi-submersible, towed, and parasitic devices.

FY 2010 planned accomplishments:

- Carry out the International maritime pathways execution plan developed in 2009 focusing on implementation of PRND concepts.
- Complete an architectural study that analyzes solutions for underwater detection against smuggling illicit materials via unconventional submersible, semi-submersible, towed, and parasitic devices.
- Continue to enhance the USCG MSRAM to better assess rad/nuc threats, vulnerabilities, and consequences, as well as the risk buy down provided by PRND systems. Refine the methodology such that it is nationally usable nationally to support the development of port-centric strategic security plans and the annual port security grant application process.
- Initiate maritime architecture studies for an inland waterways PRND architecture and offshore secondary screening.
- Begin the organization of the Maritime Domain Awareness (MDA) “community of interest” and analyze options for integrating DNDO into the appropriate level of MDA.
- Conduct top-down analysis of sea POEs to assess the efficacy of existing and proposed rad/nuc detection architectures.
- Complete an architectural study of the maritime domain in Inland Waterways to lay the ground work for enhancing the layered detection capability along this significant maritime interior layer.
- Complete an architectural study to develop options for an inter-agency CONOPS and possibly the capability for inspecting cargo onboard large vessels (particularly containerized cargo) prior to entering port.
- Fully develop rad/nuc scenarios into the USCG MSRAM. Complete understanding of the overarching framework, and develop more specific detection mitigation strategies that are beta-tested at two ports.

- Complete an Analysis of Alternative Technologies that will enhance the ability to encounter illicit smuggling of rad/nuc weapons and materials by sorting anomalies and providing targeted identification of suspect vessels.

FY 2011 planned accomplishments:

- Evaluate strategies and CONOPS required to develop a maritime “defense in depth” strategy for detection/interdiction of radiological and special nuclear material (SNM) as well as how to optimally integrate underwater detectors, mobile/relocatable detection systems, into the overarching maritime PRND architecture.
- Complete analysis of alternatives that will enhance Maritime Domain Awareness and the integration of PRND elements.
- Study and evaluate wide-area detection network of current commercial-off-the-shelf (COTS) and emerging developmental fixed, mobile, and remotely-deployable wireless sensor elements.
- Develop Gap Analyses to describe existing capabilities and elements of the architecture and develop time-phased options to improve the GNDA and close identified gaps through technological advances, policy shifts, and CONOPS, with an examination of a range of threats, weighted appropriately, as well as a range of adversaries, tactics, targets, etc. Areas of exploration include: Underwater detection, Offshore Secondary Inspection, non-container commercial POE, and risk assessment.
- Complete studies on inland waterways PRND architecture and offshore secondary screening.
- Initiate follow-on studies for the underwater detection options building on the underwater study in FY 2010.
- Continue follow-on options for looking at risks in the Maritime Domain as well as how to best fit rad/nuc threats pathway concerns into ongoing MDA activities.

Accomplishments in the Systems Engineering and Architecture - Interior Mission Area:

Significant accomplishments in FY 2009 include:

- Executed DNDO’s component of the multi-agency Radiological Dispersal Device (RDD) Public Education program under the Radiation Source Protection and Security Task Force.

FY 2010 planned accomplishments:

- Conduct three architecture studies to evaluate Interior Mission Area PRND threats and pathways

FY 2011 planned accomplishments:

- Complete Green Border States Architecture Study and develop Green Border States Architecture gap analysis to identify capabilities required in the non-border (interior) States to optimize the effect of PRND at pathway intersections.

**PRND Program Assistance (PA):** Central to the success of an integrated effort to defend our Nation from the rad/nuc threat is a strong partnership with state and local entities responsible for the PRND mission within their own communities. To facilitate this partnership, DNDO is pursuing targeted engagements with state and local communities to educate and inform them on rad/nuc threats, support available from DNDO and partner agencies, and activities they can undertake to reduce risks.

Initial engagements focus on threat and mission familiarization and are accomplished by State and Urban Area Security Initiative (UASI) PRND awareness visits. DNDO provides guidance and assistance on PRND operations to state, county and municipal agencies, spurring the development of regional PRND programs and preparing their expansion over time. These efforts lead to improved DNDO situational awareness, expanded PRND capabilities for the interior layer and integrated activities into the GNDA.

The PRND PA is intended to help multi-jurisdictional, multi-disciplinary, policy makers, program managers, and operational administrators work together to design and implement PRND programs, using the existing PRND PM Handbook. The PA is delivered through four facilitated sessions over a period of six months, to a State/Urban Area PRND Working Group (established through the PA process). The output of the PRND PA is for stakeholders to develop a PRND implementation strategy, which incorporates multiple threat pathways and is the basis for capability development. The PRND working group also serves as the primary POC for all future DNDO engagement in the State/Urban Area.

Beyond awareness and promotion of the PRND mission, DNDO is addressing the needs of state and local partners that are dedicating resources toward the PRND mission by establishing adaptive tools, strategies, and support systems that will grow over time to meet increasing demands. Seeking long-term partners to assist in our evolving support network thus far, DNDO has identified key members of the state and local PRND community from over 25 states who have been engaged in PRND planning and operations.

#### Accomplishments in Systems Engineering and Architecture - Program Assistance:

Significant accomplishments in FY 2009 include:

- Conducted 22 situational awareness outreach meetings with UASI Working Groups and the state and local community.
- Completed delivery of statewide PRND Facilitated Handbook Program Assistance package to California.

FY 2010 planned accomplishments:

- Conduct at least eight situational awareness outreach meetings with UASI Working Groups and Joint Terrorism Task Forces.
- Deliver a statewide PRND Facilitated Handbook Program Assistance package to at least three additional states or urban Areas.
- Deliver a PRND Facilitated Handbook Program Assistance package to at least three Urban Areas.
- Develop technical assistance support programs for specific operational capabilities
- Provide specialized technical assistance support to at least five states or Urban Areas to develop specific operational capabilities.

FY 2011 planned accomplishments:

- Conduct at least 14 situational awareness outreach meetings with UASI Working Groups.
- Deliver a statewide PRND Facilitated Handbook Program Assistance package to at least six additional states or Urban Areas.
- Deliver additional Technical Assistance packages.

**SUMMARY:** The table below assists in illustrating the crosswalk between specific projects and activities and the DNDO mission areas. It is clear that programs and activities have applicability to more than one mission area are represented in a cross-cutting manner.

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2009 Actuals</b>	-	-	<b>92,598</b>
<b>2010 Enacted</b>	-	-	<b>100,000</b>
<b>2011 Current Services</b>	-	-	<b>100,000</b>
2011 Program Change	-	-	(30,967)
<b>2011 Total Request</b>	-	-	<b>69,033</b>
Total Change 2010 to 2011	-	-	(30,967)

DNDO requests \$69.033 million for this activity. This includes a decrease of \$30.967 million from the FY 2010 Enacted Appropriation because of management and technology efficiencies. This reduction reflects a shift in DNDO priorities to developing a wider range of potential solutions to enduring vulnerabilities in the global nuclear detection architecture. This reallocation of resources will instead result in increased funding for systems studies, as well as testing and piloting existing technologies in new operational environments.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

DHS is responsible for ensuring that the Nation maintains a preeminent research and development program to address user requirements in radiation detection science and technology. Long range basic research activities will be conducted through the transformational research activities that are being transferred to S&T. Consequently, DNDO has implemented a consistent development methodology to build on these activities and to address technical requirements arising from gaps in operational capabilities and to meet user requirements.

In FY 2011, DNDO Systems Development efforts will include three on-going programs aimed at maturing technologies with potential applications across multiple mission areas: Human Portable Systems, the Cargo Advanced Automated Radiography System (CAARS) follow-on program, and the Stand-off Radiation Detection System (SORDS) follow-on program. Each of these initiatives are, at least in part, the result of transitioning Advanced Technology Demonstrations (ATDs) from the (previously DNDO, now S&T) transformational research and development program. In addition,

DNDO will continue efforts to develop systems to address the challenges of scanning cargo containers that are transported via rail from seaports and begin a new effort to develop boat-mounted radiation detection systems.

Overall, funding levels for Systems Development programs requested in FY 2011 are significantly reduced from the previous request, reflecting a shift in DNDO priorities to developing a wider range of potential solutions to enduring vulnerabilities in the Global Nuclear Detection Architecture. This shift of emphasis will result in increased funding for systems studies, as well as testing and piloting existing technologies in new operational environments.

**Human Portable Systems:** DNDO has multiple programs that will provide a wide variety of law enforcement and first responders with effective human portable systems for rad/nuc detection: the Handheld program, the Human Portable Wide Area Search (HPWAS) program, and the Human Portable Tripwire (HPT) program. Each of these programs will result in the delivery of detection systems that will be used in all DNDO mission areas. For example, human-portable systems will be targeted for use by CBP Office of Field Operations and Office of Border Patrol in the land borders mission area. In the aviation mission area, systems will aid CBP Officers in scanning aircraft and their contents (passengers and baggage) in the international general aviation environment, as well as passengers and baggage in the international commercial aviation environment. For the maritime mission area, future generations of human-portable systems will augment the capabilities of the U.S. Coast Guard. Interior customers will also benefit from DNDO's development of human-portable systems. Through the State & Local Stakeholder Working Group, South East Transportation Corridor Pilot (SETCP) Regional Task Team users working group, and other state and local engagements, DNDO has gathered user requirements for handheld systems. New and enhanced equipment that results from the handheld program will be available to state and local agencies for purchase through grants and other funding.

Overall, each of the three human-portable system programs seeks to expand the spectrum of detectors available to end users by 1) investigating existing commercially available systems and tailoring them to better meet the needs of operators; 2) developing cutting-edge technology when current systems are inadequate to meet customer requirements; and 3) conducting systems development efforts for maturing technologies that transition from ATDs. Next-generation systems will provide enhanced radiation detection, threat source identification, and notification capabilities to aid end-users in mitigating nuclear threats.

The first human-portable detection technology expected to transition from an ATD to a systems development phase is the Intelligent Personal Radiation Locator (IPRL), a pocket-sized spectroscopic radiation locator that detects radiation, delineates source type, and locates the source. The purpose of the IPRL ATD was to develop and characterize an affordable, pocket-sized spectroscopic radiation locator that detects radiological/nuclear (rad/nuc) emissions, delineates source type, and locates the source. The results of the ATD will be considered as potential solutions for the HPT program.

DNDO plans to engage in an iterative development process to bring IPRL capability to end-users in a timely manner.

#### Accomplishments in Systems Development Human Portable Systems:

Significant accomplishments in FY 2009 include:

##### Handheld Program

- Completed the development of base technologies that will be adapted to support mission-specific environments.
- Finalized, with the users, the operational requirements for handheld systems that will be used for small area searches and secondary screenings.
- Continued to improve the associated software utilized within the detectors. Based on additional data collection campaigns in FY 2008 and FY 2009, improvements will be made to the isotope libraries upon which these algorithms are built.

##### Human Portable Wide Area Search (HPWAS) Program

- Completed the updated mission analysis that identifies the needs for human-portable systems.

##### HPT Program

- Began the development of operational requirements through user engagement and operational analysis.
- Began the transition assessment for the transformational R&D Intelligent Personal Radiation Locator (IPRL) program, including specific assessments of the unique capabilities that IPRLs are designed to provide.

FY 2010 planned accomplishments include:

##### Handheld Program

- Initiate low rate initial production (LRIP) for handheld systems that will be used for small area searches and secondary screenings
- Conduct Operational Testing for handheld systems that will be used for small area searches and secondary screenings.
- Enter full rate production for germanium-based handheld detectors that will be used for advanced operations.

##### HPWAS Program

- No efforts beyond those budgeted for FY 2009 are currently planned for FY 2010.

##### HPT Program

- Complete the development of operational and functional requirements for an HPT system through user engagement and operational analysis.
- Conduct analysis of alternatives (AOA) for HPT potential material and non-material solutions.
- Initiate the development of a HPT system designed to meet user requirements.

FY 2011 planned accomplishments include:

#### Handheld Program

- Complete LRIP for handheld systems that will be used for small area searches and secondary screenings in the maritime environment
- Conduct Operational Testing for handheld systems that will be used for small area searches and secondary screenings in the maritime environment.

#### HPWAS Program

- No efforts beyond those budgeted for FY 2009 are currently planned for FY 2011.

#### HPT Program

- Continue the development of HPT systems designed to meet user requirements.
- Conduct data collection efforts against Special Nuclear Material (SNM) to improve algorithm performance of HPT systems.
- Conduct an Early Operational Assessment of the HPT system in a simulated operational environment.

#### **Cargo Advanced Automated Radiography System (CAARS) Follow-on Program:**

Currently-deployed Non-Intrusive Inspection (NII) radiography systems are primarily designed to provide the capability to address detection of “traditional” contraband such as drugs, currency, guns, and explosives that may be illicitly smuggled in cargo containers. These types of contraband have a relatively low atomic number (low Z), and are generally detectable with standard radiography systems and the use of image analysts for the two-dimensional radiograph. Conversely, nuclear material or shielding material, which has a high atomic number (high Z), will be seen in the radiograph as an opaque or dark object (because the high Z material will attenuate the x-rays more effectively than might be noticed by an image analyst. Current systems are used in this way and provide some degree of rad/nuc detection capability. In FY 2006, DNDO began the development of the Cargo Advanced Automated Radiography System (CAARS), which will provide the capability to automatically detect high-Z materials with high confidence and a low false alarm rate. These CAARS systems will be able to automatically distinguish between low density materials such as aluminum and steel, and higher density materials such as lead, uranium, or plutonium. CAARS systems will also provide CBP operators with the capability to continue to detect traditional contraband, although this function will not be automated and will continue to require manual image analysis.

These development efforts have since been combined with other NII development programs into a revised development and testing program. Systems being tested include the CAARS units, as they become available, in addition to the nearer-term commercial systems that have been developed by industry and possess some capability to manually or automatically detect high-Z materials. Development of the advanced capability (CAARS) will continue. Systems previously deployed will be capable of creating images that will allow CBP image analysts to continue to inspect for low-Z contraband at least as effectively as they can with current systems. System development and testing will be consistent with CBP operational needs.

With regard to the CAARS development, prototype systems were delivered in FY 2009. FY 2009 activities focused on subjecting systems to a test and evaluation (T&E) program necessary to evaluate the technology. The same methods used to characterize existing NII systems were used to characterize the CAARS prototypes. Prior to conducting the formal test, each of the CAARS vendors conducted a rigorous readiness test at their facilities.

The results of the CAARS T&E will be compared to the results of the existing NII system T&E. The result of this study will be a cost-benefit analysis (CBA) to include recommendations with regard to future development and testing options. Pending positive results of the CBA, DNDO plans to release a solicitation for a rapid development prototype followed by a pilot deployment at a POE yet to be determined.

#### Accomplishments in the Systems Development CAARS Follow-on Program:

Significant accomplishments in FY 2009 include:

- Validated radiographic test objects.
- Completed development of CAARS prototypes.
- Began T&E campaign of the CAARS prototypes.
- Completed test campaign to characterize the ability of near-term commercial NII systems to detect shielded nuclear material through either automated image analysis or manual image interpretation.
- Completed assessment of available methods to upgrade existing NII systems to incrementally improve shielded nuclear material performance.

FY 2010 planned accomplishments include:

- Complete T&E campaign of the CAARS prototypes.
- Perform cost benefit analysis (CBA) to include recommendations with regard to future development and testing options.
- Depending on the CBA recommendation, refine operational requirements and perform an AOA.
- Select the best solution alternative.

FY 2011 planned accomplishments include:

- Refine the operational concept and translate operational requirements to system specifications.
- Develop a prototype system.
- Collect data to characterize the operational environment and determine limits of technical approach.

**Stand-off Radiation Detection System (SORDS) Follow-on Program:** The purpose of the SORDS ATD is to develop and characterize passive stand off detection technologies that are capable of detecting small sources at extended distances, i.e. one mCi of  $^{137}\text{Cs}$  at

100 meters. These systems will be integrated and demonstrated on mobile platforms such as trucks or trailers. The SORDS ATD will allow DNDO to develop and evaluate the key technology of gamma-ray imaging for source detection and localization, as well as advanced alarming algorithms and sensor and data fusion techniques that may dramatically improve sensitivity and directional accuracy. These systems will show the operator visual overlays indicating the location and identification of radiation sources.

The SORDS ATD project addresses two of the most problematic constraints for passive detection and classification of radioactive materials in the interior layer; the need to detect rad/nuc materials at a large distance from the source, and with minimum detector exposure time. This is particularly problematic in detecting source vehicles along high speed public highways. Assuming the technology demonstration, projected for FY 2010, produces an acceptable increase in passive standoff detection capability, DNDO will pursue a capability development program.

#### Accomplishments in the Systems Development SORDS Follow-on Program:

Accomplishments prior to FY 2011 were included under the Transformational Research and Development PPA. FY 2011 planned accomplishments include:

- Develop a SORDS Capabilities Acquisition Plan (CAP).
- Complete an AOA.
- Develop an initial Life Cycle Cost Estimate.

**International Rail Program:** International rail traffic represents one of the most difficult challenges for radiation detection systems. Over 120 trains with 4,800 loaded rail cars enter the United States from Canada and Mexico each day through 31 rail POEs. Over 2.5 million rail cars pass every year with goods destined for every state in the country. Approximately three times the number of trains cross from Canada compared to Mexico. Additionally, three of the top five northern rail POEs and four of the top five southern rail POEs are situated in or near major urban population centers.

Currently, radiographic imaging systems are installed at the major CBP rail POEs to enable non-intrusive inspections (NII) of rail cargo. Passive radiation detection systems, such as radiation portal monitors, must overcome technical challenges in this environment: increased offset distances between the detector and rail cargo, excessive attenuation of rad/nuc signals due to heavy steel construction of the rail cars and cargo carried therein, and a preponderance of NORM cargo. Next-generation passive detection systems which have identification capabilities also face the same challenges. Furthermore, there are unique operational challenges in this environment due to the length of the trains (up to 2 miles), the distance required to stop moving trains, and the difficulties in separating alarming cars for further examination. This requires detection systems to have exceedingly low false and nuisance alarms.

DNDO has worked with CBP to capture the end-user needs and characterize the rail operational environment. DNDO will address these end user needs based on an analysis

of alternatives with a goal for deployment beginning in FY 2014 pending funds availability, operational constraints, and technology maturity levels.

#### Accomplishments in Systems Development International Rail:

Significant accomplishments in FY 2009 include:

- Developed a time-phased International Rail Scanning Strategy which addresses near-, mid- and far-term concepts.
- Developed Mission Area Requirements Analysis and Mission Needs Statement documentation for Rail Cargo Screening.
- Initiated bulk/break bulk truck and rail cargo pathway study with Canada to develop a strategy to explore the technical and operational options available to mitigate the risks posed by the rail pathway between the U.S. and Canada, especially including options that would involve U.S.-Canada cooperation.
- Analyzed alternative architectures associated with cargo screening at POEs, as well as Canada and Mexico, and developed a representative high-level systems architecture associated with the preferred alternative.

FY 2010 planned accomplishments include:

- Collecting information on existing and future system capabilities that may support the detection and identification of radiation and nuclear material carried in rail cargo via an industry Request for Information.
- Continue cooperation with Canada to develop a strategy to explore the technical and operational options available to mitigate the risks posed by the rail pathway between the U.S. and Canada, especially including options that would involve U.S.-Canada cooperation. Coordinate with CBP to maximize efficiency of information gathering and avoid duplication of effort in outreach to Canadian counterparts.
- Initiating a Rail Cargo Scanning Project with Mexico, based on lessons learned from Canada.
- Identifying, in cooperation with CBP, candidate domestic rail POE sites for a scanning technology trial targeting FY 2011.

FY 2011 planned accomplishments include:

- Initiating a technology trial at a testbed or operational rail site in the United States to identify technical and operational issues associated with technology alternatives for scanning rail cargo.
- Continuing implementation of the Rail Cargo Scanning projects with Canada and Mexico based on the plans agreed to in 2010 and implementation experience.
- Completing an AoA for the Rail Cargo Scanning project based on lessons learned from activities such as modeling and simulation efforts.
- Updating an initial Acquisition Plan completed in FY2010.

**On-Dock Rail Program:** On-dock rail accounts for the transfer of approximately 2% of all imported cargo containers to the U.S. This program addresses the challenge of scanning cargo at seaport terminals where containers are transferred from ships to a rail

facility that is within the terminal. These shipments therefore leave on rail cars that bypass the detectors at the terminal exit gate which scan trucks departing with the other 98% of the containers. Pursuant to the requirements of the SAFE Port Act of 2006, DNDO established a Rail Test Center (RTC) at the Port of Tacoma, WA. The on-dock rail terminals at the Port of Tacoma, WA, account for more than half of the aforementioned 2% of import containers.

Typically either mobile or fixed radiation portal monitors are used to scan containers on chassis as they exit a container terminal. However, when straddle carriers are used in this role, these are ineffective methods to scan containers. Efforts are underway to develop the use of a large radiation detector portal to scan the container as a straddle carrier moves it from dockside to a lay-down area prior to being loaded onto a rail. Should a secondary scan be required, a mobile detection system may be developed to scan containers. Also, CBP investigated a radiation detector mounted to the crane-mounted spreader bar that moves the container from ship to shore. On-going tests were conducted at the RTC and at Los Alamos National Laboratory.

FY 2009 funds were provided to support the design a prototype straddle carrier portal. In FY 2009, a straddle carrier portal test article was designed and construction has begun. The testing of this prototype will take place in FY 2010.

#### Accomplishments in Systems Development On-Dock Rail:

Significant accomplishments in FY 2009 include:

- Developed Mission Area Requirements Analysis (MARA) and Mission Needs Statement documentation for On-Dock (Intermodal) Rail Cargo Screening.
- DOE, DNDO, and CBP conducted additional tests of two crane-mounted detection systems to evaluate the capability of systems to detect special nuclear material sources.
- Completed the design of a straddle carrier portal test prototype for installation at the RTC.
- Developed a straddle carrier portal prototype design and initiated test planning at RTC.

FY 2010 planned accomplishments include:

- Based on modeling and simulation, as well as test results, DNDO, in coordination with CBP, will develop a specification for procurement of technologies to address the requirements of the On-Dock Rail program.
- Construct a prototype straddle carrier portal at RTC and evaluate its performance.
- Evaluate alternative technologies and determine their potential in this environment.

FY 2011 planned accomplishments include:

- Evaluate additional approaches if the concepts evaluated in previous years fail to meet requirements.
- Adopt the most successful approach from earlier trials and begin tailoring it to the specific conditions at ports requiring this capability.
- Perform operational testing of approaches that are deemed acceptable.

**Boat-Mounted Sensor Program:** A boat-mounted PRND system could pose several advantages for use in maritime PRND missions, such as stand off screening and reduction in the number of small vessel boardings of vessels of interest. Results of the FY 2008 Maritime test campaign (Crawdad) and early deployments of selected systems in the West Coast Maritime Pilot in Puget Sound will lead to the definition of a boat-mounted radiation detection system. If it is demonstrated that operational and technical requirements of the maritime mission area can be met by commercially available boat-mounted systems, systems may be incorporated into DHS acquisition programs. DNDO will develop and test a prototype system if commercially available systems cannot meet the requirements.

Accomplishments in Systems Development Boat-Mounted Sensors:

FY 2010 planned accomplishments include:

- Collect and compile the mission needs of DHS operational components in regards to maritime standoff detection to include boat-mounted, aircraft-mounted, fixed, and mobile.
- Develop operational requirements specific to boat-mounted detection systems from USCG, CBP-Air and Marine and OBP.
- Complete an analysis of alternatives to compare cost effectiveness and probability of detection of boat and aircraft-mounted standoff detection systems with currently fielded detection equipment carried by law-enforcement boarding teams.

FY 2011 planned accomplishments include:

- Finalize the requirements documents for a boat-mounted, stand-off detector.
- Develop an Acquisition Plan to include system specification.
- Begin the development of boat-mounted systems to support evaluation and deployment on selected DHS small boats.
- Procure early developmental systems against the requirements.
- Test Engineering Design Models.

**SUMMARY:** System Development projects and activities, in conjunction with S&T's transformational research and development activities, maintains the Nation's preeminent research and development program. The table below illustrates the crosswalk between

specific and the DNDO mission areas. It is clear that programs and activities have applicability to more than one mission area and are represented in a cross-cutting manner.

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2009 Actuals</b>	-	-	<b>103,985</b>
<b>2010 Enacted</b>	-	-	<b>108,537</b>
2011 Adjustments-to-Base	-	-	(108,537)
<b>2011 Current Services</b>	-	-	-
<b>2011 Total Request</b>	-	-	-
Total Change 2010 to 2011	-	-	(108,537)

DNDO requests no funding for this activity due to the program’s transfer to the DHS Science and Technology Directorate. Funding for 2011 and additional program information can be found in the Congressional Justification for the Science and Technology Directorate. The transfer results in a decrease of \$108.537 million from the FY 2010 Enacted Appropriation.

DNDO established a transformational research and development (R&D) program which seeks to identify, explore, develop, and demonstrate scientific and technological approaches that meet one or more of the following criteria: address gaps in the GNDA, dramatically improve the performance of nuclear detection components and systems, or significantly reduce the operational burden and/or cost of radiological/nuclear detection. Dramatic technological improvements may include improvements in system or component effectiveness and performance characteristics; reduction in cost of acquisition or maintenance; improvement in availability or reduction of operational burden by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors – government laboratories, academia, and private industry – encouraged to participate. This program takes advantage of the qualities and respective advantages of all three sectors to accelerate discovery and develop products, with teaming among them highly encouraged. Transformational R&D is carried out within three major programs: Advanced Technology Demonstrations (ATD), Exploratory Research (ER) and the Academic Research Initiative (ARI).

The DNDO ER program began in 2006, with annual solicitations to industry, academia and national labs. The portfolio contains a mix of approximately 50 projects covering

broad areas such as advanced scintillator development, advanced semiconductor development, photomultiplier tube replacements/photon conversion, gamma-ray imaging, helium-3 replacement technologies and fast neutron detection, novel active detection sources, active detection detectors, system and concepts, algorithms, modeling, and forensics data collection and analyses projects.

Significant accomplishments in FY 2009 include:

- Completed development of new scintillator and semiconductor materials for the ARMD ATD.
- Conducted PoC for fusion of video and directional gamma detector images to allow for screening of vehicles at speed across multiple lanes of traffic.
- Evaluated feasibility of actively detecting SNM at distances greater than 100 meters.
- Demonstrated feasibility for pathway-related and proximity induced technologies for nuclear forensics analysis.
- Accelerated the development of a promising material that could help replace helium-3 detectors in many applications.

FY 2010 planned accomplishments:

- PoC for Compton Imaging device using room temperature semiconductor detector components with supporting reconstruction and ID algorithms which enable more effective source localization.
- PoC for compact accelerator design for portable active interrogation applications.
- PoC for high spatial resolution particle detectors for use with charged particle interrogation systems.
- Demonstration of a compact laser source for nearly monochromatic high energy x-rays for active systems which enable more effective, lower dose systems.
- Accelerate several alternative technologies for neutron detectors which would not be based on helium-3.
- Complete development of several low rate production efforts for scintillators for both gamma and neutron detection.

The DNDO ATD program began in FY09. The ATD program focuses on the accelerated development, characterization and demonstration of leading edge technologies that have a high potential to address the strategic criteria listed above. Technology demonstrated conceptually under Exploratory Research often provides the impetus for ATD efforts. DNDO initiated the Intelligent Personal Radiation Locator (IPRL) ATD in FY 2006, the Standoff Radiation Detection System (SORDS) ATD in FY 2007, the Shielded Nuclear Alarm Resolution (SNAR) ATD in FY 2008 and the Intelligent Radiation Sensing System (IRSS) in FY09.

IPRL has completed fabrication of prototype units as well as completed the demonstration and characterization phase. Initial commercial units are expected in FY10. SORDS has completed fabrication on the mobile systems and is currently undergoing characterization. SNAR and IRSS are in the process of researching and developing the system designs.

The DNDO ARI program began in FY07 and has two goals. The first is to engage the academic community in DNDO research goals, building a community dedicated to solving long-term, high-risk research issues. The second is to develop the next generation of researchers in nuclear detection technology. DNDO has partnered with the National Science Foundation (NSF) for ARI. NSF administers the proposal solicitation, evaluation, and grant award process as well as the first year of the grant. Subsequent years are administered through the DHS Grants Office. Through the FY 2007, FY 2008 and FY09 NSF and DHS grant activity, 39 university teams were selected to begin research programs in areas such as next generation detection systems, nuclear forensics, detection material and detectors, and documenting key nuclear data. By virtue of supporting this research - which includes professors, undergraduates, and graduate students - future nuclear scientists and engineers are being enabled and supported throughout the educational portion of their careers.

Accomplishments in Transformational Research and Development Academic Research Initiative:

Significant accomplishments in FY 2009 include:

- Provided additional grant funding to support a total of approximately 110 undergraduate and graduate students.
- New detectors: completed fabrication of lightweight novel gas chamber neutron detector, completed fabrication of light-weight low-power neutron detector, first design photonics-based radiation sensor.
- New materials: completed first synthesis of enhanced nanophosphor materials, completed synthesis and characterization of high efficiency boron arsenide crystals for neutron detection.
- Other: developed software to fully simulate NRF, measured key NRF emission lines and (n f) cross sections, developed a smuggling interdiction model with deterrence and strategic gaming, designed shielded HEU detection system, developed social models for decision support algorithms, developed software for sensor system management and simulation.

FY 2010 planned accomplishments include:

- Approximately 140 students will be supported.
- Design and construction of a lightweight and portable neutron detector.
- Growth and structural characterization of the first boron phosphide crystals for high efficiency neutron detectors.

- Complete characterization and testing of a novel solid-state self powered neutron detector.
- Development of a web application for studying optimum use of sensor resources by dynamic programming of decision trees.
- Development of an interdiction model for smuggled nuclear materials with deterrence methodologies and strategic gaming aspects incorporated.

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Research, Development, and Operations:  
Assessments  
Program Performance Justification  
(Dollars in Thousands)**

**PPA: Assessments**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2009 Actuals</b>	-	-	<b>34,519</b>
<b>2010 Enacted</b>	-	-	<b>32,416</b>
<b>2011 Current Services</b>	-	-	<b>32,416</b>
2011 Program Change	-	-	11,049
<b>2011 Total Request</b>	-	-	<b>43,465</b>
Total Change 2010 to 2011	-	-	11,049

DNDO requests \$43.465 million for this activity. This includes an increase of \$11.049 million above the FY 2010 Enacted Appropriation.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The DNDO development and acquisition process is anchored by the assessment of DNDO-mission related programs as they are developed, deployed, and implemented. DNDO continually assesses the global nuclear detection and reporting architecture through a variety of means, including test and evaluation (T&E) campaigns to characterize technologies and systems, execution of pilots with operational agencies to evaluate concepts of operation (CONOPS), red teaming assessments to deepen the understanding of adversary capabilities, and net assessments to identify the effectiveness of the planned and deployed global nuclear detection and reporting architecture.

**Test and Evaluation (T&E) Infrastructure and Operations:** The testing of detection systems against special nuclear materials (SNM) in significant quantities and in realistic configurations is a key to assessment of rad/nuc systems. This type of testing requires highly specialized and secure testing facilities. The SNM test capability will be improved by the completion of the Rad/Nuc Countermeasures Test and Evaluation Complex (RNCTEC) located at the Nevada Test Site (NTS). This facility is unique in the U.S. Government, enabling the technical community to bridge the gap between “bench-top testing” performed by developers and operational field-testing.

Scanning containers at intermodal seaports presents unique challenges, including marine and surface cargo carriers. The Port of Tacoma was designated as host for the Rail Test

Center (RTC) for DNDO to evaluate operational protocols and various instrument technologies for radiation scanning of import containers that leave the port by rail. The RTC was required by the SAFE Port Act of 2006 and T&E operations began in FY 2008.

DNDO must also continue to develop and maintain supporting infrastructure and materials needed for test campaigns at other test facilities such as the maritime test facility at L-Lake in the DOE Savannah River Site (SRS). The Crawdad test campaign assessed eleven marine-specific detection systems during the summer of 2008. Core testing capabilities have expanded to include mobile data collection systems which are flexible to support multiple test campaigns, expanded GPS and wireless communication systems, an expanded data archival/retrieval data collection system to maintain all DNDO test data, and video tracking systems. To ensure comprehensive, technically defensible test campaigns, statisticians and rad/nuc experts are included in all test planning activities from organizations such as National Institute of Standards and Technology (NIST), DOE national laboratories, and Defense Threat Reduction Agency (DTRA).

#### Accomplishments in Assessments T&E Infrastructure and Operations:

Significant accomplishments in FY 2009 include:

- Completed construction of RNCTEC, started nuclear operations in June 2009, and completed first test campaign (ELAND) at this facility.
- Enhanced testing capability at the SRS, particularly at the Calibration Laboratory.
- Expanded testing capabilities at RTC to support upcoming ondock rail testing straddle carrier testing.
- Developed and assembled test objects for active interrogation and advanced radiography testing.
- Developed and procured relevant sources and stream-of-commerce NORM (such as “abandoned” or “seized” rad/nuc material at POEs) to support testing. This includes sources needed for Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER) testing against government-unique Technical Capability Standards.
- Conducted Rapid Response Testing (R2T) scenario to validate process and maintain readiness and proficiency.
- Completed five distinct test and evaluation campaigns, including the PAX/BAG test of equipment suitable for screening passengers and baggage at international commercial airports and the ELAND test campaign of advanced mobile preventive radiation detection systems at RNCTEC.
- Integrated expertise from partner agencies in integrated test campaigns for threat test scenario planning, analytic design, and technical data analyses and modeling.
- Enhanced data acquisition systems to include integrated video tracking, secure wireless data transmission and storage, and enhanced data archival/retrieval systems.

FY 2010 planned accomplishments include:

- Establish Inter-Agency Steering Committee, including DHS, DOE, DOD, and the IC, to integrate and oversight testing needs at RNCTEC on a National priority basis.
- Conduct at least eight major test & evaluation campaigns.
- Active participation with the European Union (EU) and International Atomic Energy Agency (IAEA) on the ITRAP+10 test campaign of COTS rad/nuc detection systems.
- Maintain and enhance testing infrastructure at RNCTEC to support advanced radiography and active interrogation.
- Develop testing capabilities to support aerial rad/nuc detection.
- Integrate expertise from partner agencies to create integrated test campaigns for threat test scenario planning, analytic design, and technical data analyses and modeling.

FY 2011 planned accomplishments include:

- Continued participation in execution of ITRAP+10 test campaign with EU and IAEA.
- Continued integration of National testing needs with inter-agency RNCTEC Steering committee
- Plan and execute 9 distinct test and evaluation campaigns
- In support of International Commercial Aviation Passengers and Baggage pilot program complete the test plan, equipment selection, and test readiness review for the technical evaluation of scanning equipment options for use by CBP to detect and identify potential rad/nuc sources for commercial aviation passenger and baggage radiography screening at the DHS/Science and Technology Transportation Security Laboratory.

**Special Nuclear Material (SNM) Sealed Source Development Program:** The sealed source design and fabrication effort will provide testing objects for multiple purposes such as: a) universities and manufacturers to develop and test developmental detectors in-house using government-owned SNM sealed sources that simulate much larger masses of SNM; b) DNDO and components to perform post-installation acceptance testing using Government-owned SNM sealed sources; c) enable capability verification assessments at non-Federal operational sites using government-owned SNM sealed sources; and d) accommodate use of SNM sources for training, testing and exercises at non-DOE locations. Building on the existing testing source set, two new source sizes and configurations will be added to the program.

This program was not initiated in FY 2009.

FY 2010 planned accomplishments include:

- 4 SNM Sealed Sources designed/fabricated for selected size categories of HEU sources.
- Sealed reactor grade Pu test source.

- Design of technical capability standards sources.

FY 2011 planned accomplishments:

- 4 SNM Sealed Sources designed/fabricated for additional size categories of HEU sources.
- 1 Special Form weapons grade Pu test source.
- 1 set of Technical Capability Standards.
- 1 set of ANSI N42.34 standards.

**Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER) Program:** The rad/nuc detector industry continues to develop new technologies and enhancements to existing technology. Federal, state, and local technology users need accurate, objective, and unbiased performance testing of this equipment to inform their procurement decisions. The pace of innovation and new products in the marketplace makes it prohibitive for the Federal government to continually conduct testing to ensure rad/nuc detection equipment procured to support the mission meets necessary performance standards. DNDO is mandated by Congress (SAFE Port Act of 2006) to implement a test and evaluation program to provide effectiveness information and metrics for evaluating preventive rad/nuc detection technology. The GRaDER program was established to provide objective and reliable performance testing against established standards. As such, partnership and collaboration with the Systems Engineering Standards Program (discussed previously) is a key element of the GRaDER framework. This testing framework can be accessed any time a vendor has a new technology, rather than waiting for a government-sponsored test.

The GRaDER program Phase I establishes independent testing against American National Standards Institute (ANSI) N42 consensus standards established by industry and the government. The law also requires DHS to publish technical capability standards and standard operating procedures for the use of non-intrusive imaging and radiation detection equipment. The GRaDER program integrates these technical capability standards into Phase II of the program. The GRaDER program, working with NIST, uses the National Voluntary Laboratory Accreditation Program (NVLAP) to designate competent laboratories and assure independent and consistent testing of Commercial-Off-The-Shelf (COTS) radiation detection devices. Results of the GRaDER program will be made available to DHS components, other Federal agencies, and state, local and tribal law enforcement and first responder agencies. The ultimate objective is to enable informed procurement decisions and ensure that grant funding provides the best detection capabilities.

Accomplishments in Assessments GRaDER Program:

Significant FY 2009 accomplishments:

- Initiated first Phase I testing of the GRaDER program for vendor-financed testing of COTS rad/nuc detection systems by NVLAP-accredited laboratory.

- Included additional ANSI standards for laboratory testing in support of the GRaDER program.
- Integrated two NVLAP-accredited or DNDO-accepted laboratories to perform testing.
- Increased scope of laboratory testing in terms of additional ANSI N42 standards.
- Continued outreach to the vendor community to inform them of the availability, benefits, and protocols of the program.

FY 2010 planned accomplishments include:

- Begin reporting results of testing against selected ANSI N42 standards to support the Authorized Equipment List from Federal Emergency Management Agency (FEMA) Grant Office.
- Initiate Phase II of GRaDER and begin testing against Technical Capability Standards.
- Integrate additional NVLAP-accredited or DNDO-accepted laboratories.
- Increase scope of laboratory testing in terms of additional ANSI N42 standards, e.g. spectroscopic personal radiation detectors.
- Continue outreach to the vendor community.

FY 2011 planned accomplishments include:

- Update information on previously tested instruments based on the NIST post-market surveillance program.
- Continue Phase I testing of the GRaDER program for manufacturer-financed testing of COTS rad/nuc detection systems by NVLAP-accredited laboratory
- Continue to report results of testing against selected ANSI N25 and N42 standards to support the Authorized Equipment List from the FEMA Grant Program Office
- Conduct Phase II of GRaDER and reporting results of testing against Technical Capability Standards
- With NIST and appropriate lab support, conduct a GRaDER post-market surveillance program to ensure continued detector quality and compliance.
- Complete GRaDER testing against the Technical Capability Standard for handheld rad/nuc detectors.

**Directed Test Campaign:** DNDO routinely conducts test campaigns to characterize currently available equipment in operationally relevant environments. Such tests provide for the independent assessment of equipment outside of the Developmental Test and Evaluation (DT&E) and Operational Test and Evaluation (OT&E) conducted by the developers of this equipment. State and local entities have repeatedly stated their requirements for these test data to inform their grant requests, to ensure that they develop grant applications that include rad/nuc equipment that is proven to be effective for their unique operational environments.

State and Local law enforcement and other public safety personnel are procuring preventive rad/nuc detection (PRND) technologies that are commercially available. Two

primary issues associated with the use of PRND technologies by law enforcement and public safety personnel are: 1) their effectiveness in detecting various radioactive sources, and 2) their performance (manufacturer and model) in certain operationally relevant environments. DNDO has evaluated off-the-shelf or government available PRND equipment in order to provide unbiased performance evaluation information on models and their potential operational utility. The following classes of detectors have been evaluated in the past under the Directed Test funding: personal radiation detectors, handheld, backpack and mobile nuclear detection systems, radiation detection systems suitable for maritime environments, and aerial platform systems (projected for FY 2010). The class of detection system for evaluation with the highest priority in FY 2011 will be selected in FY 2010.

#### Accomplishments in Assessments Directed Test Campaigns:

Significant FY 2009 accomplishments include:

- Planned and developed testing protocols for Dolphin maritime test campaign to evaluate boat-mounted stand-off detection systems in an operationally relevant environment that could be further developed to meet DHS operational component requirements for boat-mounted systems.
- Evaluated COTS/GOTS boat-mounted radiation detection systems selected for Dolphin against maritime environmental conditions

FY 2010 planned accomplishments include:

- Execute Dolphin test campaign for boat-mounted stand-off radiation detection systems against SNM in operationally relevant scenarios in San Diego. The results will support West Coast Pilot in San Diego.
- Planning and executing in conjunction with the DOE a test and evaluation campaign for aerial mounted PRND systems to determine current capabilities for helo-mounted systems in the maritime and land environment.

FY 2011 planned accomplishments include:

- Plan and execute a Directed Test campaign on classes of detection systems identified and prioritized based on needs identified by Federal, state and Local partners.

**Test Data Management.** The activities within this section pertain to the collection, standardization, utilization and archiving of data throughout DNDO programs. This includes Standard Information Exchanges (Data Interfaces) and Communications, and Data Validation and Quality.

*Data Architecture:* Virtually every DNDO program collects and stores data of some kind. Many programs collect large amounts of complex data from radiation or radiography sensors as well as supporting sensors such as cameras. This data must be

collected, stored, archived and analyzed to support both operational and test missions of DNDO. The Data Architecture program will standardize these data management functions and definitions across DNDO and DHS in order to facilitate analysis of data trends and information sharing. Using this approach at DNDO for advanced algorithm development obviates the need for additional and costly testing.

*Support for Test and Evaluation Data:* As part of the Test Data Management program, DNDO is developing an important capability that will allow for the archiving and use of technical performance data associated with the instruments DNDO develops, assesses and/or procures. This archived data, called the algorithm development test bed, is a powerful tool capable of improving algorithm and detector performance by using previously collected test data thereby providing substantial cost savings to the government. The algorithm development test bed is a nationwide asset being used by DNDO, DOE, and many national laboratories to perform injection studies, make trade-off decisions, and verify software updates. All activities that comprise the Test Data Management effort will work together to make all data collections interoperable, comparable, and re-useable for different purposes. In FY 2008 and FY 2009, initial systems are being developed to archive, manage and utilize data from DNDO test programs.

#### Accomplishments in Assessments - Test Data Management:

Significant FY 2009 accomplishments include:

- Created long-term storage design implementation for the Archival and Retrieval Management System (ARMS). Completed conversion of high value data from past tests into the ARMS standardized format.
- Added functionality to the Data Collection System (DCS) and used for an increased number of test campaigns.
- Completed the Report Analysis and Archive System (RAAS) implementation at the Defense Threat Reduction Information Analysis Center (DTRIAC).
- Migrated open and closed data sets generated for Advanced Spectroscopic Portal (ASP) algorithm development and Human Portable Radiation Detection Systems into ARMS.
- Maintained algorithm test bed, continued injection studies, and supported algorithm development and new technology trade studies.
- Performed regression testing of software updates as needed and support DHSIsotopeID (rad/nuc ID software) testing and development.

FY 2010 planned accomplishments include:

- Complete implementation of ARMS long-term data storage design.
- Support algorithm development and new technology trade studies and injection studies.
- Perform regression testing of software updates as needed, and maintain support for DHSIsotopeID testing and development.

- Enhance data acquisition systems to include integrated video tracking, secure wireless data transmission and storage, and enhanced data archival/retrieval systems.
- Continue to expand content of RAAS which will be transferred to DTRIAC in both the unclassified and classified regimes.
- Expand the number of user accounts for the RAAS material stored on DTRIAC.

FY 2011 planned accomplishments include:

- Improve export and search capabilities of ARMS.
- Enhance security classification of individual data elements in ARMS.
- Manage data that will be collected in DNDO test campaigns, and integrate the data into ARMS.
- Continue to expand content of RAAS which will be transferred to DTRIAC in both the unclassified and classified regimes.
- Expand the number of user accounts for the RAAS material stored on DTRIAC.
- Evaluate and add appropriate reports to expand the contents of RAAS.

**Red Teaming and Net Assessments (RTNA):** RTNA evaluates the overall effectiveness of implemented PRND capabilities using adversary emulation, workshops, expert elicitation, modeling, cooperative assessments, covert testing, open source studies and adversarial red teaming. Over time, these tools can improve the effectiveness of the Nation's capabilities relative to a determined adversary. They are used as part of a coordinated assessments cycle, employing cooperative and adversarial approaches in assessing the effectiveness of implemented programs. Assessments are tailored to meet customers' objectives and capability maturity levels and are designed to provide an actionable set of recommendations for improvement.

The red teaming process tests the GNDA using information available to a variety of potential adversaries. This emulation of the threat increases the probability that DNDO identifies and addresses weaknesses in the Nation's PRND defenses, and more importantly, focuses on the effectiveness of these defenses against a resourceful and adaptive adversary. Open source studies use publicly available information to develop realistic courses of action. Adversarial red teaming acts on these courses of action. Red teaming will contest technologies, concepts, protocols, and approaches to defeat or circumvent defenses based on an adversary's perception and provide insights for achieving a more robust PRND capability. Covert testing, on the other hand, intentionally introduces radiological material to fielded PRND capabilities to assess the performance of technologies and protocols.

The net assessments process examines the overall effectiveness of implemented and planned PRND capabilities and perceived adversary capabilities through cooperative means. It enables DHS and its state and local partners to evaluate its effectiveness against the adversary. This process incorporates findings and recommendations from a variety of assessment methods, including cooperative assessment methods, surveys, probabilistic modeling, and expert elicitation. When these assessment tools are used in coordination,

DNDO benefits by understanding how defensive systems perform against an emerging, adaptive adversary. This continuous process will significantly improve global nuclear detection capabilities.

Accomplishments in Red Teaming and Net Assessments:

Significant accomplishments in FY 2009 included:

- Conducted open source, covert testing, and adversarial red teaming activities, including use of SNM surrogates. Continued assessments of Federal detection capabilities beyond seaports (e.g. land border POEs and aviation). Continued to assess domestic capabilities, aligning support with DNDO outreach programs (e.g. West Coast Maritime Pilot (WCMP) and state engagements).
- Continued assessing the effectiveness of Federal, state, territorial, tribal, local agency, and first responder PRND training.
- Conducted assessments of PRND programs internal to DNDO and programs involving other agencies to determine program effectiveness. Continued assessment of the effectiveness of the Security the Cities engagement model, completed assessment of embedding detection capability with Transportation Security Administration Visible Intermodal Prevention and Response (VIPR) teams, and initiated the PRND data collection effort to baseline state and local detection capabilities.
- Conducted elicitations on potential nuclear and radiological adversaries to enhance portrayal in the probabilistic model under development.
- Completed the first phase of development of a probabilistic model that incorporates an adversary's aspirations coupled with a comprehensive transportation network.

FY 2010 planned accomplishments include:

- Conduct open source, covert testing, and adversarial red teaming activities to include using SNM surrogates and support to the second phase of the WCMP and expanded assessments of land border and aviation pathways.
- Assess the effectiveness of Federal, state, territorial, tribal, local agency, and first responder PRND training.
- Conduct assessments of PRND programs internal to DNDO and programs involving other agencies to determine program effectiveness including continuation of the PRND data collection Effort.
- Refine the probabilistic model by fully incorporating red teaming and net assessment findings and recommendations and conducting analyses that enhance the nation's PRND defenses. Follow on work includes model verification, validation, and accreditation.

FY 2011 planned accomplishments include:

- Conduct open source, covert testing, and adversarial red teaming activities to include using SNM surrogates and possible involvement in DNDO pilot programs as determined by DNDO leadership and expanded assessments of alternate pathways. Continue to assess domestic capabilities, aligning support with DNDO outreach programs.
- Continue assessing the effectiveness of Federal, state, territorial, tribal, local agency, and first responder PRND training.
- Conduct assessments of PRND programs internal to DNDO and programs involving other agencies to determine program effectiveness. Continue the PRND data collection effort to baseline state and local detection capabilities.
- Continue to elicit subject matter experts on potential nuclear and radiological adversaries to enhance portrayal in the probabilistic model under development.
- Continue to refine the probabilistic model by fully incorporating red teaming and net assessment findings and recommendations and conducting analyses that enhance the nation's PRND defenses. Conduct verification, validation, and accreditation of model enhancements.

**West Coast Maritime Pilot Program:** This pilot program supports the DHS Small Vessel Security Strategy objective to develop a robust layered defense by expanding and enhancing maritime rad/nuc detection capabilities for international, Federal, state, local, tribal and private stakeholders. Consequently, the focus of this effort is to evaluate the effectiveness of a limited, phased deployment of COTS/GOTS rad/nuc detection capabilities against the small vessel threat in the Puget Sound and San Diego regions and gather lessons learned to improve effectiveness of future deployments of maritime capabilities to other priority U.S. ports. The pilot will conclude in calendar year 2010.

Accomplishments in the Assessments - West Coast Maritime Pilot:

Significant accomplishments in FY 2009 included:

- Developed and implemented regional CONOPS and an alarm adjudication process for San Diego.
- Completed a background radiation report for Puget Sound and San Diego.
- Completed the initial design and begin limited employment of boat-mounted rad/nuc detection equipment in Puget Sound.
- Initiated training in San Diego and continued training in the Puget Sound Region to support the deployment of rad/nuc detection equipment.
- Conducted drills and exercises with human portable equipment. These exercises tested the validity of the CONOPS, procedures and protocols that were developed for each region.
- Developed maritime-specific training.

FY 2010 planned accomplishments include:

- If determined feasible, deploy, integrate and assess fixed detectors and associated CONOPS and SOPs.
- Conduct Full Scale Exercises (FSEs) in Puget Sound and San Diego in order to validate training, equipment, CONOPS, procedures and protocols. The exercises will be designed to involve all participants in the West Coast Maritime Pilot, and evaluate the effectiveness of human portable, boat-mounted, and fixed rad/nuc detection equipment in the maritime environment.
- Document lessons learned and identify gaps and assess the operational utility from the pilot to improve future development and deployment of maritime PRND capabilities.
- Develop and document a maritime PRND process that will provide a framework for other Area Maritime Security Committees (AMSC)/ports considering the establishment of a maritime PRND program.
- Identify life-cycle costs associated with maintaining a maritime PRND capability.
- Developed maritime-specific PRND training.
- Identify communications requirements to integrate maritime PRND with intelligence, targeting, reachback and response for future deployment.

FY 2011 planned accomplishments include:

- Release the Pilot Final Report, including recommendations for future deployments.

#### **International Commercial Aviation Passengers and Baggage (Pax/Bag) Pilot**

**Program:** The Passenger and Baggage (Pax/Bag) Pilot Program was initiated in FY 2008 by DNDO and CBP to enhance rad/nuc scanning capability of passengers and baggage in the commercial Air Port of Entry (APOE) environment. The program was initiated in response to Congressional direction in the Explanatory Statement that accompanied the Consolidated Appropriations Act, 2008 (P.L. 110-161), which states:

*“DNDO shall work with U.S. Customs and Border Protection (CBP) to initiate two pilots of radiation portal monitors within the air port of entry environment for screening individuals and their baggage for radioactive materials. The pilots should include a detailed concept of operations.”*

In FY 2008, DNDO and CBP completed five airport facility site surveys to assess the commercial APOE environment and gather user needs to inform the design of an equipment test campaign and two APOE operational pilots. DNDO then conducted an equipment test campaign in Spring 2009 to evaluate applicable COTS/GOTS rad/nuc detection equipment. COTS/GOTS systems demonstrating the most potential will be further evaluated in two domestic APOE operational pilots, with the possibility of adding one Pre-Clearance airport.

The two domestic APOE pilot sites selected are Seattle-Tacoma (SeaTac) International Airport and Charlotte International Airport. CBP selected SeaTac in order to provide enhanced rad/nuc detection capability prior to the February 2010 Winter Olympics;

Charlotte was selected as an opportunity to evaluate the impact of multiple rad/nuc detection deployments on a single airport environment (Charlotte is also a site for the Air Cargo Radiation Portal Monitor Program (RPMP) deployment).

Upon completion of the operational pilots, DNDO will formulate recommendations based on the results from the test campaign and operational pilots to inform future deployment strategies for APOEs (including Pre-Clearance facilities if a pre-clearance pilot location is added), and provide input for research and development efforts to optimize rad/nuc scanning of passengers and baggage in the international commercial airport environment.

Accomplishments in Assessments – International Commercial Aviation Pax/Bag Program:

Significant accomplishments in FY 2009 include:

- Conducted a test campaign to characterize performance of rad/nuc scanning systems to be carried forward in selected pilots (operational demonstrations) in the domestic APOE Pax/Bag environment.
- In close coordination with CBP and other operating agencies and stakeholders, initiated pilots at Seattle-Tacoma and Charlotte International Airports to study the effectiveness and suitability of various rad/nuc scanning equipment suites and CONOPS for scanning international air passengers and their baggage.

FY 2010 planned accomplishments include:

- Conclude pilots at Seattle-Tacoma and Charlotte International Airports; provide limited initial operational capability to Seattle-Tacoma and Charlotte International Airports.
- With CBP, TSA and other Federal and international partners, conduct at least one pilot in the commercial pre-clearance environment, if the pre-clearance location is available, to evaluate scanning alternatives according to specific pre-clearance requirements.

FY11 planned accomplishments include:

- Complete an equipment test campaign based on the Pax/Bag Pilot Program results to inform acquisition decisions for the commercial aviation pathway; includes class-specific tests and potential minimal modification of COTS.
- Initiate a cooperative test with the Transportation Security Laboratory (TSL) to evaluate non-passive (radiography) systems for scanning international commercial aviation passenger baggage.

**Green Border Pilot:** The Green Border Initiative will build upon the FY 2009 domestic interior PRND studies for the “Green Border” states along the Mexican and Canadian borders, to identify gaps and develop mitigation strategies. State and local law enforcement officials from the Border States may respond to illegal border incursions between official ports of entry. It is critical that DNDO engage with Border States to

complement Federal operations and fill vulnerable architecture gaps. The architecture study (please see the Systems Engineering and Architecture PPA) will be evaluated and a three year pilot program will be initiated in FY 2011 to develop new PRND capabilities in the Green Border States. At the completion of the pilot, changes to the National PRND Guidance Documents will be made as appropriate, the pilot results will be evaluated, and lessons learned will be disseminated to appropriate stakeholders to improve their PRND programs.

Accomplishments in Assessments -Green Border Pilot Program:

There are no prior year Green Border Pilot activities.

FY 2011 planned accomplishments include:

- Initiate Green Border Pilot to develop PRND capabilities.

**SUMMARY:** The table below illustrates the crosswalk between specific projects and activities and the DNDO mission areas. Programs and activities have applicability to more than one mission area and are represented in a cross-cutting manner.

	Aviation	Maritime	Interior	Cross cutting Functions
Test and Evaluation (T&E) Infrastructure and Operations				X
Special Nuclear Materials Sealed Source Development Program				X
Graduated Rad/Nuc Detector Evaluation and Reporting Program (GRaDER)				X
Directed Test Campaign		X		
Test Data Management				X
Red Teaming and Net Assessments				X

<b>2011 Total Request</b>	-	-	<b>33,955</b>
Total Change 2010 to 2011	-	-	(4,481)

DNDO requests \$33.955 million for this program. This is a decrease of \$4.481 million from the FY 2010 Enacted Appropriation.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

While technology is a critical tool in combating the nuclear threat, the threat cannot be effectively overcome by technology alone. All detection and interdiction efforts must be conducted in coordination with trained Federal, state, local and tribal law enforcement agencies, as well as the larger intelligence and counterterrorism communities. Accordingly, while DNDO has initiated capability enhancement and training and exercise support, it is also responsible for developing the information sharing and analytical tools necessary to create a fully integrated operating environment. Furthermore, DNDO establishes additional protocols and procedures to ensure that the detection of unauthorized nuclear explosive devices, fissile material or radiological material is promptly reported to the Secretaries of Defense, Homeland Security and Energy, the Attorney General, and other appropriate officials for appropriate action by law enforcement, military, emergency response or other authorities. DNDO must have the ability to integrate detection data and intelligence assessments in a near real-time environment to develop information that enables an overall system and situational awareness. This requires DNDO to closely interact with the Intelligence Community (IC) as a developer of intelligence requirements and consumer of intelligence products, not as an intelligence collection agency. Conversely, DNDO does partner directly with the law enforcement community, who are the primary users of preventive radiation detection equipment. This integrated approach to detection and information analysis provide a substantial improvement and efficiency in alarm resolution, threat assessments, data trend

analysis, and, most importantly, overall probability of success in countering the threat of nuclear terrorism.

**Joint Analysis Center and Joint Analysis Center Collaborative Information System:**

The Joint Analysis Center (JAC) at DNDO provides 24/7 capabilities to meet the NSPD-43/HSPD-14 directed objectives to maintain situational awareness of the GNDA, analyze information from the GNDA and share data with the Communities of Interest (COI) to ensure that detection leads to an appropriate response.

To accomplish this mission the JAC maintains data on all available deployed detectors to include their operational environment and detection histories; assists in establishing and understanding appropriate Federal, state, local and international protocols to ensure detection events lead to an appropriate response; provides 24/7 technical support to PRND operations, including notification to appropriate interagency partners for appropriate response and deployable technical assets; and fuses intelligence, law enforcement and technical data into informational products to better the operators' chances of identifying the threat. While, DNDO does not provide command or control functions over detection and response assets, it provides critical support to those who are doing so.

The JAC program includes:

- Operation and maintenance of the JAC's 24/7 capabilities, including the analytical research and techniques and protocols required to maintain situational awareness and facilitate alarm adjudication.
- The Nuclear Assessment Program (NAP).
- The Technical Reachback (TRB) Program.
- The Joint Analysis Center Collaborative Information System (JACCIS).

Both NAP and TRB are key components of the Presidential Directives NSPD-43 and HSPD 14 (Domestic Nuclear Detection) Annex 1, "U.S. Government Nuclear and Radiological Alarm Technical Adjudication and Resolution Process," and Annex 1 to PDD-41 (U.S. Policy on Improving Nuclear Material Security in Russia and the Other Newly Independent States), 15 May 2007 (C). NAP and TRB also contribute to and utilize the information and communications infrastructure provided by the JAC, and provide the subject matter expertise in support of JAC functions.

The JACCIS provides unique and centralized communication and information technology (IT) support to accomplish the mission of the JAC. Through an adaptive framework by integrating intelligent services and data provisioning capabilities in an open, scalable architecture, the JACCIS also provides the flexibility to adapt to the evolving GNDA, mission areas, business processes, and COI requirements. When fully developed, the JACCIS will fuse and store data obtained by the GNDA, as well as other pertinent data for use by the nuclear technical community, the nuclear policy community, and other members of the nuclear COI. The system will track detection events and provide alerts for events of interest, as well as the relevance to other known events through detailed

trending and analysis. It will make available historical trends to refine protocols and search parameters and better inform the nuclear counterterrorism community.

#### Accomplishments in Operations Support:

Significant accomplishments in FY 2009 include:

- Completed development, security certification, and operational deployment of the initial JACCIS.
- Maintained the 24/7 capability of the JAC for support to the deployed GNDA.
- Provided automated data collection and analytical tools to fuse and analyze all source information and alert operators of items of interest.
- Coordinated State and local authorities and agencies through the JAC on specific protocols and Standard Operating Procedures (SOPs) for alarm adjudication/resolution and develop the complementary Federal procedures in support thereof.
- Completed the initial rad/nuc information baseline on all states and major urban areas.
- Conducted weekly drills of the alarm adjudication, resolution and notification protocols integrating Federal, state and Local agencies into these drills.

FY 2010 planned accomplishments:

The JAC will continue to maintain situational awareness of the GNDA by updating and consolidating data required to facilitate appropriate architecture development, alarm adjudication and resolution, including detector deployment information and historical data on detection events. As rad/nuc detection technologies are deployed across the Nation and in strategic areas around the world, operational support will need to adapt and expand by adding increased analysis and presence to ensure 24/7 connectivity and capacity to track and handle multiple simultaneous events, and manage and update the unique protocols and interactions with the GNDA stakeholders. It is anticipated that more domestic partners will develop PRND capabilities due to DNDO engagements and outreach initiatives. It is also anticipated that international partners and their detection systems will become more integrated into a cohesive information sharing architecture due to USG initiatives such as the Global Initiative for Combating Nuclear Terrorism (GICNT). This will require the JAC to expand and adapt to ensure continued mission accomplishment.

The JAC will continue to operate and maintain the JACCIS for the effective sharing and use of rad/nuc detection information and intelligence from most detection systems operated by DHS and Federal, state, and local partners. The JACCIS baseline capabilities that will be maintained are:

- A comprehensive, accessible asset database on all deployed GNDA systems.

- Real-time data links to existing networked detection systems communications and situational awareness links to Federal operations and intelligence centers (a total of 48 data systems and 15 communications links).
- Rapid and interactive links to technical reachback via an automated communication and data sharing system, linking first responders to regional and national level technical experts.
- Real-time automated radiation source license data verification and source tracking information to include automating and networking four agreements of state license information under a pilot program with National Regulatory Commission (NRC) and the Organization of Agreement States (OAS).
- Real-time access to intelligence, law enforcement, and detection event information in an integrated and collaborative environment.
- Information, adaptation, transformation, and interoperability services.
- Reachback Event Management support to include: event ticketing and logging, task tracking, complete event and task history accounting, workflow management and collaboration, notification and alerting, technical support knowledgebase and reference material resources.

To maintain the viability and capability of the JACCIS, conservative product improvements will begin in FY 2010. This includes defining and validating updated functional requirements to support the evolution of the JAC concepts of operations and the expanding GNDA and development of upgrades for the JACCIS.

Planned accomplishments in FY2010 are:

- Establish Initial Operating Capability of JACCIS at DHS Data Center
- Improve corporate knowledge and increase the number of technical support requests that can be processed from 12 per day to 20 per day.
- Increase the number of agencies and/or requests for simultaneous support from six to 12.
- Reduce the number of man-hours per alarm adjudication from four to three.
- Increase the number of JAC Memorandums of Understanding (MOUs) with State Fusion Centers by 20% and develop the automated links from these nodes in the COI to JACCIS.
- Complete a review and update of all previous situational reports for the interior layer of the architecture. A planned review cycle of all situational awareness and information documents is required to ensure currency.
- Increase the number of JAC Technical Report disseminations by 20%.

FY 2011 planned accomplishments include:

- Engaging 50 States for DNDO data sharing agreements regarding radiation licensing, and for which data have been recorded.
- Operation of 48 data systems and 15 communication links with existing networked detection systems, communications, and situational awareness links to Federal operations and intelligence centers.

**Nuclear Assessment Program:** NAP, a DOE weapons laboratory-based capability, was transferred from DOE to DHS per the Homeland Security Act of 2002. It is a unique national capability designed to provide rapid, accurate and actionable assessments of illicit nuclear trafficking events and trends, the credibility of nuclear threat communications, and other nuclear terrorism indicators in order to assist DNDO, DHS and other U.S. Government decision makers. NAP scientists provide technical, operational and behavioral assessments of communicated nuclear threats while giving support and guidance to the U.S. Government efforts to counter nuclear smuggling. Additionally, NAP provides DNDO with significant support via analytical products and threat understanding of the GNDA.

NAP provides rapid technical support to operational elements in the law enforcement, diplomatic and intelligence communities, and reports trends in illicit nuclear trafficking. The NAP program ensures that a sufficient resource pool of subject matter experts to analyze the technical feasibility, operational practicality and behavioral resolve of communicated threats. The highly specialized skills required for this effort necessitate continued training of current and new personnel.

Accomplishments in the Nuclear Assessment Program:

Significant accomplishments in FY 2009 include:

- Maintained the unique national capability designed to provide approximately 140 rapid assessments of nuclear threat communications, illicit nuclear trafficking events, and other nuclear terrorism indicators to operational elements in the law enforcement, diplomatic, and intelligence communities.
- Maintained subject matter experts to analyze the technical feasibility, operational practicality, and behavioral resolve of communicated nuclear threats.
- Continued co-sponsoring the CIA University Nuclear Awareness Course and present the “Nuclear Crimes Overview” at 25 venues to over 600 participants from the International Law Enforcement Academy (ILEA) and CIA University.
- Provided daily reports of all-source information to enhance the situational awareness of the JAC and USG, including ongoing technical, operational and behavioral analysis and evaluations of current cable and open source traffic.
- Developed plan to enhance the archival and retrieval capability of the historical data maintained by the NAP, and in the multi-agency ‘SENTRY’ illicit nuclear trafficking database.

FY 2010 planned accomplishments:

- Maintain the unique national capability designed to provide approximately 120 rapid assessments of nuclear threat communications, illicit nuclear trafficking events, and other nuclear terrorism indicators to operational elements in the law enforcement, diplomatic, and intelligence communities.
- Maintain the Scientific Assessor Pool to meet the needs of state and local agencies in rad/nuc alarm adjudication and resolution.

- Continue co-sponsoring the CIA University Nuclear Awareness Course and present the “Nuclear Crimes Overview” at 25 venues to over 600 participants from the ILEA and CIA University.
- Provide daily reports of all-source information to enhance the situational awareness of the JAC and USG, including ongoing technical, operational, and behavioral analysis and evaluations of current cable and open source traffic.
- Transition the NAP restricted database and library and the SENTRY database into a single community-accessible tool, and collaborate with members of the IC in developing a single repository for all known data on nuclear smuggling.
- Assist DHS Office of Intelligence and Analysis (IA) in producing at least two comprehensive studies regarding illicit trafficking of nuclear material.

FY 2011 planned accomplishments:

- As requested, maintain the unique national capability designed to provide up to 120 rapid assessments of nuclear threat communications, illicit trafficking events and other nuclear terrorism indicators to operational elements in the law enforcement, diplomatic and intelligence communities.
- Continue co-sponsoring the CIA University Nuclear Awareness Course and present the “Nuclear Crimes Overview” at 20 venues to over 400 participants from the ILEA, and CIA University.

**Technical Reachback Program:** TRB is an essential component of the “U.S. Government Nuclear and Radiological Alarm Technical Adjudication and Resolution Process,” Annex 1 to NSPD-43/HSPD-14 (Domestic Nuclear Detection) and Annex 1 to PDD-41 (U.S. Policy on Improving Nuclear Material Security in Russia and the Other Newly Independent States), 15 May 2007 (C). In coordination with DOE, TRB provides 24/7 technical capability to facilitate radiation detection alarm resolution and effectively transition to response operations. TRB is composed of two elements: an initial reachback component and a national reachback component. The initial reachback component, which currently utilizes spectroscopy expertise at four national labs, supports primary alarm adjudications resulting from domestic detector deployments from state and local PRND programs. DNDO is currently reviewing the restructuring of initial reachback in order to improve efficiency, reduce costs and expand capability. This restructuring is dependent on developing an in-house reachback capability. Presently, initial reachback for DHS Federal agencies is performed by CBP’s Laboratories and Science Services (LSS). In addition to rapidly facilitating radiation detection alarm resolution by providing subject matter expertise to Federal, State, and local detection operators, the TRB national component, which is resident in the DOE weapons laboratories, develops analytic tools and reports to assist, evaluate, and enhance rad/nuc alarm adjudication.

TRB sustains these two reachback components, while enhancing the expertise of the technical personnel who support reachback capability through knowledge of equipment capabilities and limitations, intelligence situational awareness and specific knowledge of end-user CONOPS.

The demands for 24/7 TRB assistance at the Federal, state, local, and international levels are projected to increase continually as more assets are deployed, protocols are established, and awareness of the capability increases. TRB will maintain the Initial Reachback capability in FY 2010. TRB's initial reachback capability will be determined in FY 2010.

Accomplishments in Technical Reachback:

Significant accomplishments in FY 2009 include:

- Sustained operations of the National Reachback capability, supporting the radiation detection community with immediate spectral data analysis and reports for reachback requests from DHS and state and local entities.
- Sustained the existing Initial Reachback capability, while enhancing the expertise of the technical personnel who support scalable capability through knowledge of equipment capabilities and limitations, intelligence situational awareness, and specific knowledge of end-user CONOPS.
- Developed analytical tools and conducted analysis for spectral adjudication, detector performance evaluations, data mining activities, and operational reports.
- Assisted DNDO Training and Exercises in conducting two reachback and spectral analysis courses at the National Laboratories, to provide reachback tools and training to state and local radiation health professionals
- Provided spectral analysis and threat courses to LSS spectroscopists.

FY 2010 planned accomplishments include:

- Continue to analyze technology roadmap studies to keep pace with emerging detection technologies and systems in order to maintain knowledge of deployed systems that result in alarm adjudication requests.
- Continue to design and enhance software and analytical tools to conduct analysis for spectral adjudication, detector performance evaluations, data mining activities, and operational reports. Keep current with existing and emerging data formats to ensure future operability of software and analytical tools.
- Continue to provide reachback tools and training to State and local radiation health professionals, assistance with State and local development of basic reachback capabilities, and help integrating State experts into the national alarm adjudication protocol, as required
- Complete trend and analysis reports for the technical reachback process and operate and enhance DNDO's initial reachback capability through increasing alarm resolution and spectral analysis experience, greater rad/nuc detection situational awareness, improved CONOPS, and increased training and drills/exercises, as required.
- Coordinate with DOE to ensure the appropriate numbers of spectroscopists are available at the National Reachback level. Use the program's training efforts to

replace spectroscopist attrition and to accommodate increased needs due to higher call volumes.

FY 2011 planned accomplishments:

- Support the radiation detection community with rapid spectral data analysis and reports, as requested, up to projected 50 incidents.
- Prepare up to 10 technical reports that inform PRND community on detector performance, detection phenomena trends, triggers that may indicate threat material is present and operational aspects of detector performance.
- Conduct spectroscopy and reachback workshops and seminars for 100 State & local radiation health and rad/nuc detection operations personnel, as requested.

**Training and Exercises Program:** As national awareness increases and more resources are dedicated by Federal, State, and local governments to the PRND mission, operational programs will expand and create further demand on support services. To meet these needs, DNDO will develop new training, exercise, and other support resources that remain relevant to the full range of operations, technologies, and threats. The Training and Exercises Program develops and implements rad/nuc training courses and exercise support for Federal, State and local law enforcement and public safety professionals to increase PRND operational capabilities. The program's main objectives are to increase operational capabilities at the Federal, State and local levels; develop and exercise protocols and standards for effective use of radiation detection equipment and associated alarm resolution and reporting processes; develop training curricula in support of emerging detection technologies; and foster organic capabilities by assisting Federal, State, and local agencies in institutionalizing training courses in their academies. Additionally, the Training and Exercises Program supports National Security Special Events (NSSE), DHS Special Events and elevated threat conditions, as required.

The Training and Exercises Program is responsible for the development, oversight and administration of the design, delivery, evaluation and continual improvement of the PRND training curriculum and associated exercise support services. This training is directed by DNDO personnel and provided by contracted instructors in the vicinity of the requesting State or local agency utilizing their own equipment. Additionally, the Training and Exercises Program will finalize development of a comprehensive Train-the-Trainer curriculum, including distribution of self-study courseware CDs to a wide spectrum of State and local law enforcement and public safety agencies. This training will significantly increase the number, awareness and capabilities of PRND participants involved with the DNDO mission.

Furthermore, the Training and Exercises Program supports exercise services for rad/nuc detection and prevention in States, Regions and Domains within the Interior layer of the GNDA, as well as providing exercise support and consultation within international rad/nuc prevention missions.

DNDO will also continue close working relationships with FEMA to assist them in developing National planning guidance, including PRND-specific planning scenarios, Target Capability Lists (TCLs), and PRND guidance for Homeland Security grants. Beyond existing partnerships, DNDO will enhance its relationships with other Federal partners inside and outside of DHS (such as TSA, DOE, DoD/National Guard Bureau, NRC, etc.) to leverage their resources, contacts, and expertise and develop more expansive and fully networked PRND communities as we integrate them with State and local agencies at regional and national levels. In response to repeated stakeholder input, DNDO will also reach out to broader CBRNE stakeholders and support stronger coordination and collaboration where mission areas and engagement activities overlap.

#### Accomplishments in Training and Exercises:

Significant accomplishments in FY 2009 include:

- Directly trained 3,000 persons, and indirectly through Train-the-Trainer instruction, trained an additional 4,000 Federal, state, and local participants in PRND operations.
- Assisted several States (e.g., FL, CA, TX, IL, and WA) in integrating comprehensive PRND capabilities-based training into their State homeland security training infrastructure and expanded this effort to additional states.
- Provided subject matter expertise to FWC and other Southeast region mission partners and continued development of their maritime PRND training programs.
- Evaluated West Coast Maritime Pilot PRND training program and applied lessons learned to next generation maritime training materials.
- Provided training assistance to the Northern Border (Great Lakes) Security Initiative to Ohio in conjunction with the USCG.
- Participated in a National Level Exercise 10 (TOPOFF 5) and two Principal Level Exercises (PLE).
- Provided guidance and oversight for the West Coast Maritime Pilot exercises in Seattle, WA and San Diego, CA.
- Supported National Security Special Events (NSSE), DHS Special Events, and elevated threat conditions, as required.
- Represented DNDO with other USG agencies in designing and executing preventive rad/nuc exercises in conjunction with the U.S. Department of State-led GICNT.

FY 2010 planned accomplishments:

- Directly train 3,500 persons, and indirectly, through Train-the-Trainer instruction, 5,000 additional Federal, State, and local participants in PRND capabilities.
- Develop DVD-ROM and web-based instructional tools for the Personal Radiation Detectors (PRDs) commonly used by law enforcement and first responder agencies.

- Continue to assist additional States (regionally representative) to integrate comprehensive PRND capabilities-based training into their State homeland security training infrastructure and expand this effort.
- Integrate and pilot PRND training curriculum into two to three Federal, State, and local law enforcement and/or fire training academies for current staff and new recruits.
- Provide maritime rad/nuc training detection assistance to additional Great Lakes States participating in the Northern Border Security Initiative.
- Deliver advanced small craft maritime rad/nuc training curriculum to FEMA/NPD.
- Deliver a maritime-specific training module suitable for an integrated port-centric rad/nuc detection plan.
- Conduct workshops, table top exercises, drills and FSEs in support of DNDO regional pilot projects and programs.
- Participate in NLE and PLE, as scheduled.
- Develop and lead two additional regional FSEs within the interior mission area.
- Provide guidance and oversight for discussion-based exercise activities supporting the WCMP project.
- Support NSSEs, DHS Special Events, international rad/nuc detection exercises, e.g. GICNT and elevated threat conditions, as required.

FY 2011 planned accomplishments:

- In partnership with FEMA/NPD, expand DNDO training and exercise support to meet the growing demand from State and local levels.
- Direct and indirectly train 4,500 participants in PRND operations and reduce the cost per trainee by 5%.
- Continue to work with the PRND Training Advisory Committee (TAC)
- Develop targeted PRND training for Next Generation instrumentation and advanced operations.
- Develop and promulgate PRND alternative training products.
- Integrate comprehensive PRND capabilities-based training in two States' homeland security systems.
- Refine PRND Exercise planning guidance and assist States in establishing PRND exercise programs.
- National Federal Exercise Support National Level Exercise
- Provide exercise support to Federal, and State and local exercises, upon request.
- Provide exercise support to International Programs: GICNT, DOD International Counterproliferation Program (ICP) and FBI WMD International Training Program.
- Provide Exercise Support to four operations-based and eight discussion-based exercises within DNDO mission areas.

**Department of Homeland Security

DNDO requests \$22.542 million for this activity. There is an increase of \$2.842 million above the FY 2010 Enacted Appropriation.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

In the aftermath of a nuclear detonation in the United States, or following the seizure of a nuclear device or nuclear materials, there will be extreme pressure to rapidly attribute the source, to identify the responsible party, and to ensure that it does not happen again. Nuclear forensics, as one of the three pillars supporting attribution (along with intelligence and law enforcement investigations), is an integral component in ensuring that the U.S. has such a capability. Additionally, nuclear forensics provides essential support to the global nuclear detection architecture by establishing a credible deterrent to risk-averse adversaries who may provide clandestine support (through the offer of nuclear materials or technologies) to those pursuing a nuclear attack against the U.S. or its allies. At the strategic level, nuclear forensics contributes to deterrence and prevention by promoting the concept of “nuclear accountability” for nations that may wittingly or unwittingly enable a terrorist to obtain nuclear devices or materials.

As such, a National Technical Nuclear Forensics (NTNF) capability serves as an integral component and layer of the USG effort to combat nuclear terrorism. Across the whole of the government, this capability provides means for the collection, analysis, and evaluation of rad/nuc materials and devices, and associated evidence, for the purpose of comprehensive and timely forensic analysis to contribute to attribution conclusions. This capability provides the means for the collection, analysis, and evaluation of interdicted material or post-detonation debris. An effective technical forensics capability supporting

intelligence and law enforcement activities will aid the attribution effort and inform national response deliberations as well as help deter a follow-on attack.

DNDO's NTNF mission, as part of this larger governmental effort, has two primary components: 1) to ensure operational readiness as the national "systems integrator" by providing centralized planning, integration, assessment, exercising, and stewardship of USG nuclear forensics capabilities, and 2) to conduct nuclear materials R&D enabling an enduring capability to rapidly, accurately, and credibly identify the origins and history of nuclear and radiological materials. Other departments and agencies, including the Departments of Defense, Energy, and State, the Federal Bureau of Investigation, and the broader Intelligence Community, provide other key capabilities towards this effort.

As the national NTNF "systems integrator", DNDO's NTNF Center (NTNFC) maintains a strong, consistent program to coordinate TNF activities across the USG. This coordination is critical to the success of the mission – ad hoc cooperation in the aftermath of an event will fail to meet intense demands for rapid and effective processes. The NTNFC is meeting its integration responsibility by leading joint planning, reviews, exercises, and assessments of NTNF activities in order to maximize readiness and advance capabilities.

DNDO's pre-detonation nuclear materials R&D program supports its essential mission to serve as the national capability developer for technical nuclear forensics of rad/nuc materials interdicted before a detonation. Within this context, DNDO is striving to advance technical capabilities and at the same time restore an academic "pipeline" to ensure an enduring national capability. This multi-pronged approach seeks to balance the immediate need to deliver improved capabilities, while simultaneously meeting the USG's long-term need to maintain world-leading scientific and technical forensics expertise. The success of the pre-detonation materials program is a crucial contribution to USG efforts to counter the growing threat of nuclear terrorism, which is evidenced by increased instances of global nuclear smuggling and proliferation and the more widespread access to nuclear knowledge since the early 1990s. The program is focused on ensuring and advancing the capability to perform rad/nuc materials analysis, evaluation, and interpretation of all sources of technical information, including isotopic and chemical composition, physical structure, manufacturing processes, and material pathways; developing and sustaining a pre-detonation concept of operations and technical capabilities to handle and analyze rad/nuc materials; and performing research and development to address gaps and shortfalls in the capabilities. This includes the development of Material Reference Standards and validated methodologies for analyzing materials. DNDO is working with the National Laboratories, in addition to international partners, to further progress in this mission area.

At the same time, the NTNFC also leads and stewards USG initiatives to restore and sustain an enduring nuclear forensics expertise pipeline, which is one of the most critical challenges facing the nation's TNF capability. DNDO is leading activities to address pipeline deficiencies on multiple fronts, including fellowships, internships, outreach, university awards, and enhanced multi-year R&D funding. DNDO is increasing the

emphasis it has placed on the nuclear forensics expertise pipeline, which requires continued and enhanced funding across the human capital spectrum from the most junior (e.g., student internships and fellowships, and retaining/recruiting new faculty) to the most senior (e.g., engaging and retaining the laboratory forensic scientists through knowledge capture and a stable and sufficient R&D program). The joint DNDO initiatives in forensics and transformational research academic expertise initiatives have already begun to generate enormous enthusiasm among non-governmental organizations, universities, and the National Laboratories, and are providing a significant “adrenaline boost” to the nuclear expertise pipeline.

**Operational Readiness Support -- Integration, Exercises, and Assessment:** DNDO’s overarching nuclear forensics role as the national “systems integrator” is focused on ensuring operational readiness in the event that TNF capabilities are called up. This involves providing centralized planning, integration, assessment, exercising, and stewardship of USG nuclear forensics capabilities.

In integrating efforts across interagency partners, DNDO leads the coordination of a comprehensive global TNF capability that weaves together and leverages the six departments and agencies with roles and responsibilities across the TNF mission spectrum, including DHS, DOE, DoD, FBI, DOS, and the Office of the Director of National Intelligence (ODNI). DNDO leads the USG in NTNF planning efforts and achieves full interagency and system integration across departments and labs by producing and maintaining an NTNF Strategic Plan, operational Playbook, and other foundational NTNF community planning documents, annually coordinating an interagency NTNF budget crosscut, and producing and maintaining an NTNF Strategic Communications Plan.

#### Accomplishments in NTNF Operational Readiness – System Integration and Assessments:

Significant accomplishments in FY 2009 include:

- Completed the interagency NTNF Strategic Plan and the Baseline Capabilities Framework.
- Updated the NTNF Playbook, based on results from two major end-to-end interagency exercises in FY09, Oak Phoenix (post-detonation) and Marble Challenge (pre-detonation device and materials), among other developments..
- Completed the development of an interagency NTNF Strategic Communications Plan, which will inform stakeholders, the media, the public, and adversaries.
- Initiated development of an interagency NTNF Implementation Plan.
- Led interagency assessment and development of Oak Phoenix Exercise “Corrective Action Plans.”
- Conducted two interagency program planning and alignment sessions to coordinate activities and refine the NTNF interagency budget crosscut.

- Led interagency Steering Committee meetings at least every two months, as well as an annual Executive Council meeting, to facilitate issue resolution and document development, coordination, and review.
- Led the development of the first interagency NTNF International Engagement Strategy.
- Initiated the first overarching NTNF Annual Capability Assessment to evaluate how well the NTNF community can accomplish the mission in each phase of the process. Partnered with the FBI and ODNI to plan and lead a major assessment and exercise in the Summer Hard Problem Program (SHARP) entitled “Interdisciplinary Communication of Nuclear Event Attribution: How and Why?” The assessment involved experts from inside and outside government, and examined issues and processes related to time-sensitive decision making and effective formulation and communication of technical conclusions (which may be based on incomplete information) with their associated confidence levels to senior officials
- Facilitated the major National Academy study on nuclear forensics through completion of all information gathering into the final report writing phase.

FY 2010 planned accomplishments include:

- Complete first NTNF Annual Capability Assessment. Summarize as appropriate and submit to the National Preparedness Report.
- Complete the interagency NTNF Implementation Plan.
- Complete annexes to the interagency NTNF Strategic Communications Plan
- Continue to lead the centralized interagency effort to coordinate TNF activities and ensure continued interagency program and resource alignment, including annual refining of the Budget Crosscut.
- Continue to lead joint planning through the interagency Steering Committee and Executive Council.
- Update the NTNF Playbook as necessary to reflect maturing TNF operational processes.
- Complete the National Academy of Sciences (NAS) Study which will provide findings and recommendations to sustain and improve the Nation’s nuclear forensics capabilities.
- In collaboration with State Department and other partners, complete the interagency NTNF International Engagement Strategy.
- Conduct first annual assessment to ensure alignment of interagency budgets with OSTP Nuclear Defense R&D Roadmap gaps and priorities.
- Continue to chair the National Science & Technology Council’s Nuclear Defense R&D Attribution Working Group to evaluate gaps and coordinate interagency long-term R&D priorities.

FY 2011 planned accomplishments include:

- Review the interagency NTNF Implementation Plan and update as necessary.

- Review the interagency NTNF Strategic Communications Plan and update as necessary.
- Continue to lead the centralized interagency effort to coordinate TNF activities and ensure continued interagency program and resource alignment, including annual refining of the Budget Crosscut.
- Continue to lead joint planning through the interagency Steering Committee and Executive Council.
- Update the NTNF Playbook as necessary to reflect maturing TNF operational processes.
- Participate in reviewing the interagency NTNF International Engagement Strategy and updating as necessary.
- Conduct second annual assessment to ensure alignment of interagency budgets with OSTP Roadmap.
- Continue to chair the National Science & Technology Council's Nuclear Defense R&D Attribution Working Group to evaluate gaps and coordinate interagency long-term R&D priorities.
- Update Annual Capability Assessment and submit to the National Preparedness Report.

**Exercises:** DNDO reviews and assesses NTNF capabilities by conducting exercises and evaluating performance, processes, and protocols. Once an exercise has been conducted, the documented results are appraised and thoroughly examined for areas of needed improvements. Finally, recommended enhancements are proposed to the interagency NTNF Exercise Working Group. All relevant interagency partners participate in the exercise planning and schedule coordination process, including DOJ, DOS, DoD, DHS, ODNI, DOE, and the national laboratories. Exercises assess field sampling techniques, laboratory analysis and coordination, data evaluation and reporting, and strategic communication flow and media output. The major exercises alternate between pre-detonation and post-detonation scenarios involving nuclear and radiological materials.

DNDO will ensure the USG has capability to effectively execute technical nuclear forensics across the full spectrum of missions by executing or ensuring the execution of one large scale end-to-end field exercise every two years and by executing two proficiency tests for pre-detonation materials annually. These exercises and associated training events will focus on the refinement of interactions within the nuclear forensics community. The primary objectives will explore technical and operational shortcomings and interagency gaps, and DNDO and its partners will pursue corrective actions based on After Action Reports and Lessons Learned.

#### Accomplishments in NTNF Operational Readiness – Exercises:

Significant accomplishments in FY 2009 include:

- Provided planning support and participated in the first large-scale NTNF end-to-end exercise. This DOE-sponsored event, named Oak Phoenix, included players

- from DOE, FBI, DHS, and DoD. The exercise objectives encompassed post-detonation sample collection, lab analysis, and data evaluation.
- Conducted Proficiency Tests in order to validate competencies in TNF pre-detonation materials analysis. These Proficiency Tests are designed to validate a particular TNF analytical capability. End-to-end exercises are designed to demonstrate proficiencies and interfaces for a specific set of TNF analytical capabilities along with data evaluation procedures and information flow.
  - Conducted exercise planning and participated in the DOE and FBI major exercise (Marble Challenge) to assess the flow of information from this scenario into the attribution process and the application of pre-detonation processes. This involved an interdicted pre-detonation device which was recovered by the FBI, rendered-safe by DOE, and analyzed and evaluated by the national laboratories.

FY 2010 planned accomplishments include:

- Lead the NTNF Community through the planning, execution, after action evaluation, and corrective action plan development of NTNF operations as part of National Level Exercise 2010 addressing National Planning Scenario 1 for an Improvised Nuclear Device.
- Review and assess NTNF capabilities by training and exercising all of the processes, targeting the overarching goals of process improvement and technical enhancement.
- Integrate and synchronize exercise events across the TNF community for maximum leverage and benefit to all departments and agencies.
- Conduct two Proficiency Tests in order to validate competencies in nuclear materials analyses. Document the results and capture corrective actions.

FY 2011 planned accomplishments include:

- Update Corrective Actions Plan based on prior year exercises.
- Conduct two Proficiency Tests in order to validate competencies in TNF materials analyses. Document the results and capture corrective actions.
- Integrate and synchronize exercise events across the TNF community for maximum leverage and benefit to all departments and agencies.

**Technology Advancement – Pre-Detonation Materials Research & Development (Collections, Analysis, and Evaluations):** The pre-detonation rad/nuc materials forensics capability development is the NTNFC's primary R&D mission. This mission is focused on ensuring and advancing the capability to perform rad/nuc materials analysis and evaluation. This involves isotopic and chemical composition and physical structure. This R&D is used to address identified gaps and shortfalls in the capabilities.

In order to improve TNF capabilities for interdicted rad/nuc materials, DNDO will use deployed capabilities in Material and Data Collection to characterize and identify discriminating signatures in pre-detonation special nuclear material (SNM) and

radiological materials from foreign and domestic sources by investigating sample populations and analyzing existing, unique, and available data sets.

The pre-detonation R&D program in Analysis also develops and validates methodologies that will provide quality results with known uncertainties in the exploitation of signatures for nuclear forensics purposes. A Quality Assurance program developed in partnership with, and maintained by the FBI defines the use of standard methods for analyses, articulation of confidence in results, and practice of demonstrated competencies in measurements and evaluations.

Finally, DNDO will enable an enduring national capability for rapid and credible technical conclusions, incorporating all relevant TNF information in support of attribution assessments by developing a Knowledge Management & Assessment System (KMAS). KMAS is comprised of new data evaluation tools designed to assist in formulating technical conclusions based on combining large datasets, disparate data and information, and validated predictions. KMAS enables the nuclear forensics analyst to 1) canvas and link large amounts of disparate data and information, 2) recognize latent patterns and trends in multi-dimensional data, 3) link nuclear material production processes with potential discriminating material signatures throughout the nuclear fuel cycle, and 4) discover potentially new discriminating nuclear forensics signatures. KMAS will enable the nuclear forensics analyst to accelerate the formulation of interpretations that support attribution in a credible and defensible manner.

Funding that was requested under the Systems Development PPA in FY 2010 for the Knowledge Management and Assessment System (KMAS), is being requested under the NTNF PPA in FY 2011. This shift of funding again co-locates all TNF development efforts into a single PPA.

#### Accomplishments in NTNF Technology Advancement – Materials and Data Collection:

Significant accomplishments in FY 2009 include:

- Examined foreign source materials for radiological dispersal device (RDD) signatures, specifically Am and AmBe sources, to populate a database for comparative signatures as well as have material samples for future analytical methodology development.
- Performed comprehensive forensics material characterization on selected U.S. highly enriched uranium (HEU) samples, based on the high resolution gamma-ray screening results from 2008, to identify potential discriminating signatures in U.S. HEU.
- Collaborated with international partners through the 14<sup>th</sup> International Technical Working Group on Nuclear Smuggling and Forensics.
- Collaborated with the Canadian government on RDD material signatures and associated databases.

- Partnered with the Department of State (DOS) to support international workshops and related activities under the Preventing Nuclear Smuggling Program (PNSP) and Global Initiative.

FY 2010 planned accomplishments include:

- Continue comprehensive forensics material characterization on selected U.S. HEU samples to identify potential discriminating forensics signatures in U.S. HEU.
- Continue broader international cooperation under the GI and ITWG constructs.
- Develop sealed-source database tools to track foreign and domestic sealed sources coordinated with interdicted material tracking information, in conjunction with DOE Office of Intelligence and FBI.

FY 2011 planned accomplishments include:

- Continue application of validated and accepted methodologies to analyze samples of US-produced SNM and radiological material for the purposes of collecting signature information.
- Continue international cooperation through bi-lateral arrangements (e.g., Canada, UK), intergovernmental cooperation (e.g., IAEA and the Global Initiative), and through scientific and technical collaborations (e.g., ITWG).
- Continue data collection through arrangements with foreign and domestic isotopic sealed source manufacturers and through historical US production documents and archives.

Accomplishments in NTNF Technology Advancement – Analysis:

Significant accomplishments in FY 2009 include:

- In coordination with DOE Office of Nuclear Energy, moved toward rebuilding and restarting a mass separator at Idaho National Laboratory, which will be the only operating mass separator in the U.S. for the production of enriched isotopes for use as standard reference material. Barium is the first material needed for production to support the  $^{137}\text{Cs}$  age dating methodology.
- Transitioned quality assurance (QA) oversight and ISO-17025 (certification) maintenance to the FBI. Developed an overall policy for QA needs for the NTNF program.
- Developed a standard validation plan to apply to analysis methodologies in the latter stages of their development. This plan is the basis for validation of specific analyses prior to their availability for operational use.
- Continued development of a standardized, validated methodology for cesium age-dating.

FY 2010 planned accomplishments include:

- For RDD threat material, complete validated methodology for  $^{137}\text{Cs}$  age-dating in a CsCl matrix (the first validated methodology for the TNF program) and include the development of a supporting barium reference material.
- Complete standard reference material development which supports  $^{137}\text{Cs}$  age-dating method validation.
- Produce priority standard reference materials with the mass separator.
- Begin the development of a comprehensive set of validated analytical methodologies for the forensic analysis of uranium materials. Complete validation of uranium isotopic and chemical composition analyses on specific uranium materials.
- Continue to engage international partners in sharing standard reference materials, best practices and protocols, and participate in an international materials forensics exercise.
- Support the R&D of novel technologies and signature exploitation, which will advance through the hypothesis testing phase and into the initial demonstration phase.

FY 2011 planned accomplishments include:

- Continue development of standard reference materials that will aid in the validation of analytical methodologies to be employed in TNF activities.
- Continue development of validated methodologies to be employed in TNF activities. Specifically, continue development of uranium analysis methodologies
- Support the research and development of novel technologies and signature exploitation, which will advance through the hypothesis testing phase and into the initial demonstration phase.

Accomplishments in NTNF Technology Advancement – Evaluation:

Significant accomplishments in FY 2009 include:

- Initiated plans for controlled uranium production capability to enable development of process-based predictive signatures for HEU.
- Conducted forensic analyses of foreign research reactor spent fuel assemblies to improve modeling in research reactors which will support both special nuclear materials (SNM) and RDD attribution assessments.
- Based on the successful demonstration of group exclusion algorithms, initial feasibility of group inclusion was demonstrated, using the open-source SFCOMPO (spent fuel) database, to mathematically link hypothetical questioned samples with potential signature families.
- Completed a comparative survey of worldwide Plutonium reprocessing plant forensics signatures.
- Facilitated the advancement of international nuclear forensic capabilities -- partnering with the Atomic Weapons Establishment (AWE) in the United

Kingdom, under the existing DOE Joint Working Group collaboration, to identify and determine diagnostic reprocessing signatures in Plutonium material.

FY 2010 planned accomplishments include (funded through the FY 2010 Systems Development request):

- Demonstrate the first production batch of uranium material from controlled bench-scale production capability to enable development of process-based predictive signatures.
- Conduct the first demonstration of KMAS tools for pattern recognition and trend analyses when sifting through substantial banks of nuclear materials data
- Demonstrate the next generation of tools for pattern analysis and methods to articulate whether or not measurements from questioned samples can be included or excluded from specific families of signatures.
- Develop and validate predictive models and techniques to improve understanding of how material production processes throughout the nuclear fuel cycle (from mining raw material to processing, enrichment, and finishing) can affect discriminatory forensics materials signatures (which are created, persist, and, erased throughout the fuel cycle).
- Continue knowledge capture of “hands-on” nuclear and radiological materials production expertise, which is disappearing, to assist in identifying the most potentially discriminating signatures from materials production processes.
- Continue international collaborations on TNF materials signatures analyses and comparative process knowledge with the UK and Canadian governments.

FY 2011 planned accomplishments include:

- Continue to expand the application of KMAS evaluation tools for use in the forensics exercise program and operational case studies.
- Continue to develop and validate predictive models and techniques to improve understanding of how material production processes throughout the nuclear fuel cycle can affect the discriminatory forensics materials signatures.
- Continue knowledge capture of “hands-on” nuclear and radiological materials production expertise, which is disappearing, to assist in identifying the most potentially discriminating signatures from materials production processes.
- Continue development and initial demonstration of temporal analysis tools to reveal trends in US nuclear material production timelines.
- Expand the international collaboration on TNF materials signatures analyses and comparative process knowledge with the UK and Canadian governments.

**National Nuclear Forensics Expertise Development Program (“Academic Pipeline”):** An enduring nuclear forensics scientific workforce and academic pipeline is critical to ensuring a national capability to provide rapid and accurate technical nuclear forensics analyses and interpretations in support of deterrence and attribution. The nuclear forensics interagency community, academicians, and non-governmental organizations have determined that the Nation’s academic nuclear pipeline capacity has

withered and will not meet the near and long-term needs for qualified nuclear scientists, engineers, and associated faculty for a credible and enduring capability. In its role as steward for the national nuclear forensics capability, DNDO developed plans, and, in FY 2008, launched the first steps to begin immediately restoring the pipeline and to prepare for the FY 2009 academic year. Based on the successful inaugural FY 2008 activities, the FY 2009 and FY 2010 academic pipeline activities will be expanded and enhanced to include undergraduate summer internships, Ph.D. student fellowships, post-doctoral fellowships, faculty awards, and university education awards. This forensics-focused academic strategy is closely integrated with the academic initiatives in DNDO's transformational R&D mission area. These activities are intended to expand at a prudent pace annually, so that results can be measured and evaluated in step with expansion.

Accomplishments in NTNF National Nuclear Forensics Expertise Development Program:

Significant accomplishments in FY 2009 include:

- Continued support to a new cadre of interns at the Seaborg Institute Nuclear Science Summer Internship Programs, which involves the research and education of 10-15 graduate students (and exceptional undergraduates) each at Lawrence Livermore National Laboratory (research) and Los Alamos National Laboratory (technician training).
- Initiated an undergraduate internship program that would fund undergraduate research projects and students.
- Continued a partnership with the American Physical Society (APS) for nuclear forensics outreach programs at undergraduate and top high schools.
- Continued and expanded the Nuclear Forensics Graduate Fellowships for the 2009 – 2010 academic year, funding the initial four students selected in FY 2008 for an additional year and awarding fellowships to six new students.
- Initiated two Post-doctoral Fellowships at the national laboratories in order to bring the best and brightest into the nuclear forensics core team's pipeline.
- Initiated a Nuclear Forensics Education Awards Program (NFEAP) to foster nuclear forensics-related education and research at universities (initially two awards in FY 2009).
- Continued sponsorship of outreach to universities, war colleges, and other institutions.

FY 2010 planned accomplishments include:

- Build upon the success of programs initiated in FY 2008-2009, and expand them in a controlled and measured fashion to achieve a steady-state goal in FY 2012.
- Continue support to a new cadre of interns at the Seaborg Institute Nuclear Science Summer Internship Programs.
- Continue support for undergraduate internship programs through two technical nuclear forensics summer programs: nuclear forensics summer internships at the national laboratories and a nuclear forensics summer school at a university (partnered with a National Laboratory).

- Increase graduate fellowships to 14 in FY 2010 (from 10 in FY 2009).
- Expand NFEAP to include seven awards in FY 2010 (from two in FY 2009).
- Initiate Junior Faculty Award Program to address the academic faculty deficiencies in the pipeline (initially two awards).
- Expand the nuclear forensics outreach program.

FY 2011 planned accomplishments include:

- Perform a census of the TNF workforce to collect information on experience and expertise available to the TNF community.
- Perform an analysis of the census of the TNF workforce and produce a report identifying any trends or gaps.
- Perform an assessment of the impact of NTNF requirements on the TNF workforce, as requirements and technologies change, and produce a report.
- Continue support to a new cadre of interns at the Seaborg Institute Nuclear Science Summer Internship Programs.
- Continue support for undergraduate internship programs through two technical nuclear forensics summer programs: nuclear forensics summer internships at the national laboratories and a nuclear forensics summer school at a university (partnered with a National Laboratory).
- Maintain the Nuclear Forensics Graduate Fellowship Program at 14 fellows in FY2011.
- Expand Post-doctoral Fellowships to six in FY 2011 (from five in FY 2010)
- Expand NFEAP to include eight awards in FY2011 (from seven in FY 2010).
- Continue to fund Junior Faculty Awards at universities with three awards in FY 2011 (from two in FY 2010).

## IV. Program Justification Changes

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Research, Development, and Operations:  
Systems Engineering and Architecture  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 1:**                    Systems Engineering and Architecture  
PPA:                                         Systems Engineering and Architecture  
Program Increase:                    Positions 0.0, FTE 0.0, Dollars \$13385.0

Funding Profile

	FY 2009 Actuals			FY 2010 Enacted			FY 2011 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	25,448
Program Increase							-	-	13,385
<b>Total Request</b>	-	-	<b>25,302</b>	-	-	<b>25,448</b>	-	-	<b>38,833</b>

Justification:

An increase is realized in Systems Engineering and Architecture as a result of an ongoing shift in DNDO priorities to developing a wider range of potential solutions to enduring vulnerabilities in other Mission Pathways identified in the GNDA. This reallocation of resources will result in increased funding for systems studies to identify efficient methods to address those vulnerabilities.

Directive / Mandate:

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to “[s]erve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

Impact on Performance

This effort to address potential solutions to enduring vulnerabilities in additional areas within the GNDA aligns with the Secretary’s priority of Preventing Terrorism and Enhancing Security.

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Research, Development, and Operations:  
Systems development  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 1:** Systems Development  
PPA: Systems development  
Program Decrease: Positions 0.0, FTE 0.0, Dollars \$-30,967.0

Funding Profile

	FY 2009 Actuals			FY 2010 Enacted			FY 2011 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	100,000
Program Decrease							-	-	(30,967)
<b>Total Request</b>	-	-	<b>92,598</b>	-	-	<b>100,000</b>	-	-	<b>69,033</b>

Justification:

Systems Development funding is decreased due to a programmatic reassessment focusing on solutions beyond passive scanning of rad/nuc materials in containerized cargo. DNOD's internal planning and the need to address vulnerabilities in other pathways, prioritizes the funding requirements for DNDO that results in a decrease in Systems Development for FY 2011. As potential solutions are realized the requirements and necessary resources for Systems Development in future years may be required.

The shift to other PPAs results in the need to reduce the development of Post Advanced Technology Demonstrations(ATDs) Post-ATDs are program actives resulting from the discover of new material or techniques initiated by Transformational Research Directorate that have graduated from the stage. In prior years DNDO has managed 3 Post-ATD Development efforts at various stages of in their development lifecycle in a fiscal year. The focus in FY 2011 is on the need to address vulnerabilities in other pathways, which results in a decrease in requirements for program management and systems engineering support integral to systems development.

Directive / Mandate:

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to “[s]erve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

### Impact on Performance

This funding reduction in FY 2011 will not impact the Department's performance goals. The focus on addressing vulnerabilities in mission areas beyond containerized cargo will enable DNDO to find solution to improve rad/nuc detection capabilities. The reductions have been targeted to minimize the impact on overall performance goals.

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Research, Development, and Operations:  
Assessments  
Justification of Program Changes  
(Dollars in Thousands)**

**Program Increase 1:** Assessments  
PPA: Assessments  
Program Increase: Positions 0.0, FTE 0.0, Dollars \$11,049.0

Funding Profile

	FY 2009 Actuals			FY 2010 Enacted			FY 2011 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	32,416
Program Increase							-	-	11,049
<b>Total Request</b>	-	-	<b>34,519</b>	-	-	<b>32,416</b>	-	-	<b>43,465</b>

Justification:

An increase for Assessments is needed as DNDO conducts a broader range of test and evaluation campaigns, grows the SNM detection campaigns, and continues to implement the GRaDER Program for the testing of rad/nuc detection technologies. The GRaDER and PRND Directed test campaigns are expected to result in tangible improvements to COTS Products available in the marketplace.

The mission areas are impacted by a wide range of tests and evaluations and the various pilot programs managed under Assessments. For instance, while a couple of pilot programs (recently completed West Coast Pilot Program and the on-going tests at the Rail Test Center) expands the maritime rad/nuc detection capabilities for international, Federal, State, local, tribal and private stakeholders, another type of testing will enable the technical community to bridge the gap between “bench-top testing” performed by developers and operational field-testing.

Directive / Mandate:

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to “[s]erve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

Impact on Performance

This increase will enable the Domestic Nuclear Detection Office to more effectively meet the Secretary's priority of Preventing Terrorism and Enhancing Security

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Research, Development, and Operations:  
Operations support  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 1:** Operations  
PPA: Operations support  
Program Decrease: Positions 0.0, FTE 0.0, Dollars \$-4,481.0

Funding Profile

	FY 2009 Actuals			FY 2010 Enacted			FY 2011 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	38,436
Program Decrease							-	-	(4,481)
<b>Total Request</b>	-	-	<b>40,133</b>	-	-	<b>38,436</b>	-	-	<b>33,955</b>

Justification:

In a fiscally constrained environment, a programmatic reassessment focusing on engineering and architectural solutions results in a prioritization of DNDO projects. The identification of efficiencies to meeting objectives, such as the Technical Reachback Program, results in lower funding requirements for the Operations PPA.

Directive / Mandate:

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to “[s]erve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

Impact on Performance

This funding reduction will not impact the Department’s performance goals and aligns with the Secretary’s priority of Preventing Terrorism and Enhancing Security. The focus on addressing vulnerabilities in mission areas beyond containerized cargo will enable DNDO to find solution to improve rad/nuc detection capabilities. The reductions have been targeted to minimize the impact on overall performance goals.

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Research, Development, and Operations:  
National Technical Nuclear Forensics Center  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 1:** Forensics  
PPA: National Technical Nuclear Forensics Center  
Program Increase: Positions 0.0, FTE 0.0, Dollars \$2,842.0

Funding Profile

	FY 2009 Actuals			FY 2010 Enacted			FY 2011 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	19,700
Program Increase							-	-	2,842
<b>Total Request</b>	-	-	-	-	-	<b>19,700</b>	-	-	<b>22,542</b>

Justification:

Forensics is increased in a realignment of the resources that had been targeted for the development of the Knowledge Management and Assessment System (KMAS) Tool that was previously funded in the Systems Development PPA.

Directive / Mandate:

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to “[s]erve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

Impact on Performance

This realignment will allow DNDO to continue to fund the Knowledge Management and Assessment System, a program that will further the Secretary’s priority of Preventing Terrorism and Enhancing Security.

## V. Exhibits and Other Supporting Materials

### A. Justification of Proposed Legislative Language

For necessary expenses for radiological and nuclear research, development, testing, evaluation and operations, [\$324,537,000] \$207,828,000 to remain available until September 30, 2013. (*Department of Homeland Security Appropriations Act, [2010] 2011*)

### PPA Mission Statement

Systems Engineering and Architecture: DNDO Systems Engineering and Architecture programs are (1) developing an enhanced global nuclear detection architecture, including both domestic and international components, and (2) maintaining and supporting a disciplined systems engineering approach throughout DNDO. The global architecture is comprised of several key elements: a multi-layered structure of radiological/nuclear detection systems, deployed both domestically and overseas; a well-defined and carefully coordinated network of interrelationships among them; and a set of systems engineering-based principles and guidelines governing the architecture's design and evolution over time. From its initial stand-up, DNDO recognized the importance and need for the application of a systems engineering approach in achieving an integrated and balanced global nuclear detection system solution. Effective implementation and operation of detection systems begins with the design and development of reliable and maintainable systems, built to rigorous, established performance standards and specifications, while assessing total system performance and total ownership costs within the family of radiological/nuclear detection systems.

### Summary Justification and Explanation of Changes

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
<b>21.0 Travel and transportation of persons</b>	<b>209</b>	<b>405</b>	<b>500</b>	<b>95</b>

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2011 request of 0.500 million is an increase of 0.095 million above the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.1 Advisory and assistance services	5,591	3,311	5,843	2,532

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2011 request is \$5.843 million which is an increase of \$2.532 million above the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.3 Purchases of goods & svcs. from Gov't accounts	19,502	7,500	10,770	3,270

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2011 request of \$10.770 million is an increase of \$3.270 million above the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.5 Research and development of contracts	-	14,232	21,720	7,488

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2011 request is \$21.720 million which is an increase of \$7.488 million above the FY 2010 Enacted Appropriation. DNDO develops time-phased strategies and plans for improving the probability of detecting and interdicting rad/nuc attacks. Studies and analyses are performed to characterize GNDA gaps, identify options, evaluate the advantages and disadvantages of alternative solutions, and formulate time-phased plans for reducing risk. The time-phased aspect of the plans is important because it allows for the integration of current and near-term technologies and approaches, as well as longer-term options that may draw upon technologies that are currently in the R&D phase that may not be available for implementation for several years.

**PPA Mission Statement**

Systems Development: DNDO Systems Development and Acquisition (SDA) programs serve as the radiological/nuclear detection systems research, development and acquisition component within DNDO. SDA is responsible for the engineering development, production, and all developmental logistics products associated with the current and next generation of nuclear detection systems. Product lines include radiation portal monitors (and associated materials development and facilitation), radiography (which includes non-intrusive inspection, or NII, systems such as the CAARS), human-portable systems, and integration programs to address the needs of our operational customers (Federal, State, local, and tribal authorities).

**PPA Mission Statement**

The FY 2011 Request includes the transfer of the DNDO Transformational Research and Development program to the Science and Technology Directorate. DNDO's transformational and applied R&D program seeks to identify, explore, develop, and demonstrate scientific and technological approaches that meet one or more of the following criteria: address gaps in the GNDA, dramatically improve the performance of nuclear detection components and systems, or significantly reduce the operational burden of rad/nuc detection. Dramatic technological improvements may include improvements in system or component effectiveness and performance characteristics; reduction in cost of acquisition or maintenance; or reduction of operational burden by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors – government laboratories, academia, and private industry – encouraged to participate. This program takes advantage of the qualities and respective advantages of all three sectors to develop products, and teaming among them is encouraged. Transformational and applied R&D is carried out within three major programs: Exploratory Research (ER), Academic Research Initiative (ARI), and Advanced Technology Demonstrations (ATD).

**Summary Justification and Explanation of Changes**

**PPA Mission Statement**

Assessments: The DNDO research, development, and acquisition process is anchored by an independent assessment of DNDO-mission related programs as they are developed, deployed, and implemented, as well as a continual assessment of the global nuclear detection and reporting architecture, through a variety of means. Assessments programs include test and evaluation (T&E) campaigns to characterize technologies and systems, execution of pilots with operational agencies to evaluate concepts of operation, red teaming assessments to deepen our understanding of adversary capabilities, and net assessments to identify the effectiveness of the planned and deployed global nuclear detection and reporting architecture.

**Summary Justification and Explanation of Changes**

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
<b>21.0 Travel and transportation of persons</b>	<b>120</b>	<b>545</b>	<b>655</b>	<b>110</b>

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2011 request of \$0.655 million is an increase of \$0.110 million above the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
<b>25.1 Advisory and assistance services</b>	<b>3,509</b>	<b>5,670</b>	<b>7,800</b>	<b>2,130</b>

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2011 request is \$7.800 million which is an increase of \$2.13 million above the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.3 Purchases of goods & svcs. from Gov't accounts	30,890	1,026	2,500	1,474

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2011 request of \$2.50 million is an increase of \$1.474 million above the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.4 Operation and maintenance of facilities	-	8,682	10,300	1,618

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2011 request is \$10.30 million which is an increase of \$1.618 million above the FY 2010 Enacted Appropriation. The testing of detection systems against special nuclear materials (SNM) in significant quantities and in realistic configurations is a key to assessment of rad/nuc systems. This type of testing requires highly specialized and secure testing facilities such as the Nevada Test Site (NTS). This facility is unique in the U.S. Government, enabling the technical community to bridge the gap between “bench-top testing” performed by developers and operational field-testing.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.5 Research and development of contracts	-	10,861	13,710	2,849

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2011 request is \$13.710 million which is an increase of \$2.849 million above the FY 2010 Enacted Appropriation. The DNDO research, development, and acquisition process is anchored by the assessment of DNDO-mission related programs as they are developed, deployed, and implemented.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.7 Operation and maintenance of equipment	-	390	550	160

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2011 request is \$0.550 million which is an increase of \$0.160 million above the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
41.0 Grants/Subsidies/Contributions	-	5,242	7,950	2,708

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2011 request is \$7.950 million which is an increase of \$2.708 million above the FY 2010 Enacted Appropriation.

**PPA Mission Statement**

DNDO Operations Support is responsible for supporting the situational awareness of the nuclear and radiological landscape and the global nuclear detection architecture, while directly facilitating the technical adjudication of rad/nuc incidents. The capability of the JAC is the 24/7 DNDO information hub, and the essence of DNDO's rapid information reporting. Additionally, Operations Support develops training, exercises, information sharing capabilities, and analytical tools necessary to create a fully integrated operating environment to be used by Federal, State, tribal, and local law enforcement agencies, as well as the larger intelligence and counterterrorism communities.

**PPA Mission Statement**

DNDO's National Technical Nuclear Forensics (NTNF) capability serves as an integral component and layer of the United States Government (USG) effort to combat nuclear terrorism. This capability provides means for the collection, analysis, and evaluation of rad/nuc materials and associated evidence for the purpose of comprehensive and timely forensic analysis to contribute to attribution conclusions. An effective forensics and attribution capability will inform national response deliberations and can also help to prevent a follow-on attack. At the strategic level, nuclear forensics can contribute to deterrence and prevention by promoting the concept of "nuclear accountability" for nations that may wittingly or unwittingly enable a terrorist to obtain nuclear devices or materials.

A strong, consistent effort to coordinate NTNF activities across the USG is critical to the success of the mission. DNDO's NTNF Center (NTNFC) has the leading role to ensure this coordinated success as national systems integrator for USG nuclear forensics. NTNFC is fulfilling its mandate to steward the national-level planning, integration, advancement, and readiness of an enduring national nuclear forensics capability. DNDO has begun planning and leading the interagency effort to address pipeline issues on multiple fronts, including fellowships, internships, scholarships, outreach, university awards, and enhanced multi-year R&D funding. DNDO's joint forensics and transformational research academic expertise initiatives have generated enormous enthusiasm among non-governmental organizations, universities, and national labs. These new initiatives are providing a significant adrenaline boost to the nuclear pipeline.

**Summary Justification and Explanation of Changes**

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
<b>21.0 Travel and transportation of persons</b>	<b>703</b>	<b>205</b>	<b>242</b>	<b>37</b>

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2011 request of \$0.242 million is an increase of \$0.037 million above the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.1 Advisory and Assistance Services	2,277	1,105	1,150	45

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2011 request is \$1.150 million which is an increase of \$0.045 million from the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.3 Purchases of goods & svcs. from Gov't accounts	14,835	17,375	17,700	325

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2011 request of \$17.700 million which is an increase of \$0.325 million above the FY 2010 Enacted Appropriation.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.5 Research and development of contracts	-	1,015	3,450	2,435

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2011 request of \$3.450 million is an increase of \$2.435 million above the FY 2010 Enacted Appropriation. The pre-detonation rad/nuc materials forensics capability development is the NTNFC's primary R&D mission. Forensics is focused on ensuring and advancing the capability to perform rad/nuc materials analysis and evaluation. This involves isotopic and chemical composition and physical structure. This R&D is used to address identified gaps and shortfalls in the capabilities.

## BUDGET REQUEST AND SUPPORTING INFORMATION

### Systems Acquisition:

## I. Appropriation Overview

### A – Mission Statement for Systems Acquisition:

The Domestic Nuclear Detection Office (DNDO) acquires rad/nuc detection equipment for other DHS components, including the United States Coast Guard (USCG), multiple offices within Customs and Border Protection (CBP), and the Transportation Security Administration (TSA). In addition, the DNDO acquisition program provides robust systems engineering and test and evaluation programs in support of fielded systems. DNDO aims to ensure that all deployed systems are evaluated prior to any acquisition decisions, so that the performance capabilities of these systems were well understood. All deployed technologies are accompanied by the appropriate training, exercises, and alarm response protocols. This ensures that systems are operated properly, and alarms are adjudicated according to established protocols.

### B – Budget Activities:

**Radiation Portal Monitor Program:** The United States border is the first layer within the Global Nuclear Detection Architecture (GNDA) where the United States has full control over detection and interdiction. As such, considerable effort and resources have been placed at this layer to provide comprehensive rad/nuc detection capabilities, particularly at ports of entry (POEs). After 9/11, considerable concern was raised about the possibility that terrorists could use the enormous volume of cargo flowing into the United States as a pathway for bringing in nuclear material or a nuclear weapon. By far, the largest mode for incoming cargo is maritime shipping containers, with approximately 11 million containers coming into the country every year, so it was with a sense of urgency that this pathway was addressed. The Radiation Portal Monitor (RPM) Program (RPMP) was established by CBP, and later transferred to DNDO, with the objectives of deploying monitoring equipment at the United States POEs and providing the scientific and technical expertise to design, acquire, deploy, operate, and maintain these systems. Additionally, in the Safety and Accountability for Every Port Act of 2006 (SAFE Port Act of 2006), Congress mandated that all containers coming in through the top 22 ports, by volume, be scanned for radiation. DNDO has acquired and deployed commercial-off-the-shelf (COTS) first-generation polyvinyl toluene (PVT) RPMs in accordance with the GNDA and CBP priorities, as defined in a joint DNDO/CBP deployment strategy. A key consideration in rad/nuc detection is the ability to effectively detect threats without impeding the flow of legitimate trade and travel across the border. CBP currently scans cargo entering at the Nation's POEs using PVT-based RPMs that can detect radiation, but cannot distinguish between threat materials and naturally-occurring radioactive material (NORM), such as kitty litter and ceramic tiles. To address this limitation, DNDO has been developing next generation technology to automatically detect and distinguish threats from non-threat materials, reducing unwanted referrals while also reducing false alarms. Narrowing down alarms to just those for dangerous materials is especially

important for POEs that have a high volume of containers, or those that see a high rate of NORM traffic.

**Human Portable Radiation Detection Systems:** DNDO has multiple programs that provide a variety of law enforcement and first responders with effective human portable systems for rad/nuc detection: the Handheld program, the Human Portable Wide Area Search (HPWAS) program, and the Human Portable Tripwire (HPT) program. The Handheld program is developing technologies that detect the source of radiation and reliably discriminate between normally-occurring radioactive materials, background, and potential threats. The HPT program is intended for small area searches. These systems, used for detecting, localizing, and identifying rad/nuc materials, must be relatively light, easy to use, and of sufficiently low cost to support widespread deployment. Conversely, wide area searches are purposeful searches performed to find rad/nuc material in larger areas, such as a large aircraft or in passenger, baggage, and cargo conveyance pathways. HPWAS detection systems range in size, maximizing detection capability, and may include an isotope identification function. Until HPWAS, HPT, and Handheld program systems are available for acquisition, currently available systems will be procured to most effectively support user needs

**C – Budget Request Summary:**

The Domestic Nuclear Detection Office requests \$61.0 million in FY 2011 funding for the Systems Acquisition appropriation, an increase of \$41.0 million from the FY 2010 Enacted Appropriation

## II. Summary of FY 2011 Budget Estimates by Program/Project Activity (PPA)

### Department of Homeland Security Domestic Nuclear Detection Office Systems Acquisition:

#### Summary of FY 2011 Budget Estimates by Program Project Activity

FY 2011 Request  
(Dollars in Thousands)

Program Project Activity	FY 2009		FY 2010		FY 2011		Increase(+) or Decrease(-) for FY 2011					
	Actuals		Enacted		Request		Total Changes		Program Changes		Adjustments-to-Base	
	FTE	Amount	FTE	Amount	FTE	Amount	FTE	Amount	FTE	Amount	FTE	Amount
Radiation Portal Monitor Program	-	93,021	-	-	-	8,000	-	8,000	-	8,000	-	-
Securing the Cities	-	14,906	-	20,000	-	-	-	(20,000)	-	(20,000)	-	-
Human Portable Radiation Detection Systems Program	-	4,615	-	-	-	53,000	-	53,000	-	53,000	-	-
<b>Subtotal, Enacted Appropriations and Budget Estimates</b>	-	<b>112,542</b>	-	<b>20,000</b>	-	<b>61,000</b>	-	<b>41,000</b>	-	<b>41,000</b>	-	-
Adjustments from Other Funding Sources	-	-	-	-	-	-	-	-	-	-	-	-
<b>Net, Enacted Appropriations and Budget Estimates:</b>	-	<b>112,542</b>	-	<b>20,000</b>	-	<b>61,000</b>	-	<b>41,000</b>	-	<b>41,000</b>	-	-

### III. Current Services Program Description by PPA

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Systems Acquisition:  
Radiation Portal Monitor Program  
Program Performance Justification  
(Dollars in Thousands)**

#### PPA: Radiation Portal Monitor Program

	<u>Perm. Pos</u>	<u>FTE</u>	<u>Amount</u>
<b>2009 Actuals</b>	-	-	<b>93,021</b>
<b>2010 Enacted</b>	-	-	-
<b>2011 Current Services</b>	-	-	-
2011 Program Change	-	-	8,000
<b>2011 Total Request</b>	-	-	<b>8,000</b>
Total Change 2010 to 2011	-	-	8,000

DNDO requests \$8.0 million in FY 2011 for this activity. This is an increase of \$8.0 million above FY 2010.

#### **CURRENT SERVICES PROGRAM DESCRIPTION:**

##### **Radiation Portal Monitoring Program:**

Since the program's inception there has been a focus on the acquisition of solutions to provide detection capability to scan containerized cargo. Early in the history of DHS roughly 2% of cargo containers were being scanned for rad/nuc material. Considering the volume of containerized cargo that is received by the United States, this pathway received significant attention. As the deployment of portal monitors progressed to the nations seaports and land board crossings approached the 100% screening objectives, attention to the vulnerabilities in other rad/nuc paths began to receive attention.

Presently, the priorities are to develop a wider range of solutions to enduring vulnerabilities in other Mission Pathways as identified in the GNDA. Vulnerabilities in the aviation pathway and maritime pathways beyond the major ports of entry are of critical importance. These solutions must be adaptive to the varying operating conditions, and environments that are present in these pathways often require a mix of fixed and mobile solutions.

Funding supports the Joint Acquisition Strategies to provide Rad/Nuc Detection equipment to the U.S. Coast Guard, the Transportation Security Administration as well as several elements of the Customs and Border Protection (CBP) in accordance with operational priorities.

In order to address technological and operations needs at the ports of entry, DNDO initiated the Advanced Spectroscopic Portal (ASP) program in 2006, building on previous work within CBP and the DHS Science and Technology Directorate. In addition to the ability to identify and distinguish rad/nuc threats from non-threats, ASP systems have higher sensitivity to some rad/nuc threat materials than PVT systems. Thus, the introduction of ASP systems will reduce the probability of missing a threat as well reducing the number of unnecessary referrals and false positives. ASP units are now being developed with two separate vendors.

Both systems will complete several rounds of performance testing and field validation at POEs. Following these performance tests, both systems will complete independent operational testing and evaluation conducted by the DHS Science and Technology Directorate's Operational Testing Authority. Test data will be analyzed and provided in support of the Secretary's Certification decision

Advanced Spectroscopic Portal (ASP) Certification continues to be delayed to ensure that all operational concerns have been resolved. The Field Validation testing is a critical component of the Operational Test Plan and must be completed in order for a final operational configuration to be arrived at. Once this happens the rest of the schedule can be estimated. Until then DHS cannot provide a timeframe with certainty when the system will be ready for S1 certification.

In FY 2010 no funding was requested for the RPMP, reflecting unobligated carryover balances from prior appropriations and delays in final Secretarial certification of ASP systems. DNDO will continue to acquire non-ASP radiological/nuclear detection equipment as it draws down unobligated balances remaining for this activity.

#### **Accomplishments in the Radiation Portal Monitor Program:**

Significant accomplishments in FY 2009 include (all accomplishments listed below will be met with FY 2009 funding, though some activities may be completed in FY 2010):

- Procured and deployed RPMs to continue to progress towards the DHS goal of 100% screening of containerized cargo and personal vehicles entering the U.S. at designated POEs.
- Procured and deployed RPMs to continue to work toward the goal of scanning 100% of cargo at seaports. Continued the deployment of PVT RPMs to a large number of smaller capacity seaports that account for a smaller volume of cargo being screened.

FY 2010 planned accomplishments include:

- Completion of the multi-year Northern Border Initiative using prior year funding. To achieve this goal, DNDO deployed PVT systems to over 100 northern land border crossings to ensure 100% screening of cargo and personal conveyances.
- Contingent upon the decisions coming out of the Helium-3 IPT, DNDO plans to continue deploying up to approximately 180 PVT systems already procured.

FY 2011 planned accomplishments include:

- Pending successful ASP certification, procure and deploy a mix of PVT and ASP systems based on the approved deployment strategy. Initial ASP deployments will focus on the locations where improved performance is most needed, across land border crossings and seaports.
- Procure and deploy RPMs in support of CBP's American Recovery and Reinvestment Act (ARRA) funding for new and expanded POEs. Activity will maintain the achieved 100% screening for cargo and personal conveyances at land border POEs.
- As the GNDA and operational priorities dictate, remaining funding will provide for deployments of RPMs to other pathways. Potential sites include air cargo terminals; passenger preclearance sites; international rail border crossings; mail facilities; on-dock rail terminals, or other cargo conveyances such as roll-on/roll-off, break-bulk, and bulk.

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Systems Acquisition:  
Securing the Cities  
Program Performance Justification  
(Dollars in Thousands)**

**PPA: Securing the Cities**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2009 Actuals</b>	-	-	<b>14,906</b>
<b>2010 Enacted</b>	-	-	<b>20,000</b>
<b>2011 Current Services</b>	-	-	<b>20,000</b>
2011 Program Change	-	-	(20,000)
<b>2011 Total Request</b>	-	-	<b>-</b>
Total Change 2010 to 2011	-	-	(20,000)

DNDO does not request any funding for this activity due to the completion of the three-year pilot project in New York City.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Securing the Cities Initiative:** The objective of the Securing the Cities (STC) initiative was to prevent a rad/nuc attack on high-risk metropolitan areas by enhancing regional capabilities to detect and interdict radiological threats. A total of \$20.0 million was appropriated for STC in FY 2010; however, no funding is requested in FY 2011.

Significant accomplishments for FY 2009 include:

- Implemented the means to calibrate and maintain equipment purchased through the STC initiative.
- Deployed over 4,000 Personal Radiation Detectors, 50 Radioisotope Identifiers (with communication equipment & computers), 100 backpack-based detectors, and 30 mobile detection systems. Deployment includes delivery of uniformly configured equipment and associated training on the use of the equipment.

FY 2010 planned accomplishments include:

- Continue to support the STC pilot's goal of facilitating the implementation of an architecture for the interdiction of illicit radiological materials within the New York City region.

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Systems Acquisition:  
Human Portable Radiation Detection Systems Program  
Program Performance Justification**  
(Dollars in Thousands)

**PPA: Human Portable Radiation Detection Systems Program**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2009 Actuals</b>	-	-	<b>4,615</b>
<b>2010 Enacted</b>	-	-	-
<b>2011 Current Services</b>	-	-	-
2011 Program Change	-	-	53,000
<b>2011 Total Request</b>	-	-	<b>53,000</b>
Total Change 2010 to 2011	-	-	53,000

DNDO requests \$53.0 million in FY 2011 for this activity. This is an increase of \$53.0 million above FY 2010.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Human Portable Systems:** DNDO procures multiple types of equipment that provide DHS Components and in some cases law enforcement and first responders with effective human portable systems for rad/nuc detection and identification. These solutions are used for detecting, localizing, and identifying rad/nuc materials and are relatively light, easy to use, and of sufficiently low cost to support widespread deployment. The objectives of this program are an effort to expand the range of activities and address different types of conveyances and cargo to be scanned for rad/nuc material.

**Visible Intermodal Prevention and Response Teams:** An increased layer of preventive rad/nuc detection (PRND) capabilities poised at domestic transportation modes provides both a deterrent to terrorist activities and increases the odds of detecting rad/nuc material in transit to a target. The coupling of PRND capabilities with the Transportation Security Administration's (TSA's) Visible Intermodal Prevention and Response (VIPR) team operations provides greater detection capability, rapid response, and additional PRND trained and equipped law enforcement personnel in support of the Global Nuclear Detection Architecture (GNDA). Through the delivery of tailored training and suites of PRND equipment, TSA VIPR teams have become another Federal asset that may be called upon during times of heightened rad/nuc alert.

A fully equipped VIPR team consists of a supervisor and six team members who are equipped with seven Personal Radiation Detectors (PRDs), four handheld Radio-Isotope Identification Devices (RIIDs), and four Radiation Detection Backpacks per team, including spares.

Accomplishments in Systems Acquisition for VIPR teams:

Accomplishments in FY 2009 include:

- Procured and deployed rad/nuc detection equipment and operational spares for eight national VIPR teams.
- Procured and deployed rad/nuc detection equipment and spares for the TSA training facility to allow TSA to develop and conduct its PRND “train the trainer” program.

FY 2010 planned accomplishments:

- No funding was requested nor provided for this activity in FY 2010.

FY 2011 planned accomplishments:

- Complete outfitting an additional 7 VIPR Teams.

**Mobile Detection Deployment Program:** In FY 2007, DNDO began the procurement of a rapidly-deployable national nuclear detection capability, a suite of mobile (man-portable) and re-locatable (vehicle-mounted) detection systems and accompanying communications and information infrastructure deployable to varying locations based upon heightened threat and security alert levels. This Federal asset will increase limited existing capacity for domestic deployments of radiation detection equipment to support special events, allow for wide-area detection in response to non-specific threats, and serve as a force multiplier for DOE Radiological Assistance Program (RAP) teams and Nuclear Incident Response Teams (NIRT). The system package will be Federally-owned and maintained, but operated in conjunction with State and local agencies.

The initial MDDP asset (delivered and fielded in FY 2008) was modeled after a RAP response system; a vehicle (SUV/truck/van) towing a trailer loaded with enhanced radiation detection instruments and command and control capabilities. The MDDP consists of: six large response systems, and three small response systems. The large response system will consist of a truck and trailer configured to safely transport radiation detection and radionuclide identification instruments sufficient to field a 40-member team. The system will also include certain command and control-related equipment and support equipment. The small system is identical to the large system, but configured instead to field a 20-member team. Location of systems will be rolled out according to concentration and priority of identified National Security Special Events (NSSE) and other Special Events.

Accomplishments in Systems Acquisition for the MDDP:

Accomplishments in FY 2009 include:

- Deployed existing MDDP unit and developed a strategy to expand the program to the necessary operational capability.
- Completed build-out of two additional MDDP units and initial deployment of one of the additional systems.

FY 2010 planned accomplishments:

- No funding was requested nor provided for this activity in FY 2010.

FY 2011 planned accomplishments:

- No funding is requested for this activity in FY 2011.

**CBP Office of Field Operations:** DNDO coordinates with CBP-OFO for the deployment of handheld systems for Customs Officers to scan cargo and privately owned vehicles (POV) at CBP ports of entry. Current or next-generation systems will be procured based upon availability.

Accomplishments in Systems Acquisition for the CBP-OFO:

Accomplishments in FY 2009 include:

- Procured and deployed 349 handheld systems.

FY 2010 planned accomplishments:

- No funding was requested nor provided for this activity in FY 2010.

FY 2011 planned accomplishments:

- Procure 350 (RIIDS) Handheld detection systems.

**Phased Deployment Implementation Plan:** The Phased Deployment Implementation Plan (PDIP) is a joint effort between DNDO, the CBP Office of Intelligence and Operations Coordination (OIOC), the CBP Office of Border Patrol (OBP), and Laboratory and Scientific Services (LSS) to upgrade the effectiveness of detecting illicit radioactive material being smuggled into the United States across our borders with Canada and Mexico without passing through official POEs.

A PDIP Working Group has been formed with the user (CBP-OBP) that considered all Border Patrol sectors (including HQ in Washington, DC) and developed a prioritized

schedule for system deployment. Handheld detection units and personal radiation detectors (PRDs) will be procured for CBP-OBP in FY 2011 based upon the deployment schedule. Current or next-generation systems will be procured based upon availability.

Accomplishments in Systems Acquisition for the PDIP:

Accomplishments in FY 2009 include:

- Procured and deployed 169 handheld systems.

FY 2010 planned accomplishments:

- No funding was requested nor provided for this activity in FY 2010.

FY 2011 planned accomplishments:

- Procure 6669 PRDs for CBP-OBP Intelligent Personal Radiation Locators (IRPL), if available to equip approximately 18 OBP sectors. (If IPRL units are not available, current-generation PRDs will be procured.)
- Procure 269 (RIIDS) Handheld detection systems for CBP-OBP.

**United States Coast Guard Joint Acquisition Strategy:** DNDO and the USCG have collaborated on a Joint Acquisition Strategy (JAS) to leverage resources to assist the USCG with achieving the DHS Secretary's goal that all USCG boarding/inspection teams have radiation detection equipment by the end of 2007. The JAS identifies the USCG radiation detection requirements and delineates responsibilities for developing and providing equipment to meet this requirement. In addition, the JAS provides for recapitalization of currently deployed systems, and for the acquisition of advanced detection systems. In FY 2008, DNDO supported: 1) the recapitalization of 10% of the USCG Personal Radiation Detectors (PRDs); 2) the acquisition of the additional HPRDS Communications Packages (HCPs) required to complete the USCG's requirement for wireless spectra transmission of gamma spectra for alarm adjudication; and 3) the provision of an advanced radiation detection capability for deployable, specialized forces. Beginning in FY 2009, DNDO budgeted funds for efforts to recapitalize existing USCG equipment at a rate of approximately 20% annually as well as to acquire, in low rates, newly developed rad/nuc detection systems. As newly developed equipment becomes available, cost benefit analyses will be conducted to determine if this next-generation radiation equipment should be used for recapitalizing instead of being replaced with older systems.

Acquisition of advanced rad/nuc detection systems (such as boat-mounted systems) will be required to enhance the radiation detection capability of the USCG, which presently is predominantly comprised of human portable systems. As currently envisioned, boat-mounted systems do not require the boarding of a vessel to screen it for rad/nuc devices. The Boat-Mounted Sensor Program description in the Research, Development, and

Operations (RD&O) appropriation provides further information about these advanced detection systems.

### **Accomplishments in Systems Acquisition for the USCG JAS:**

Significant accomplishments in FY 2009 include:

- Began recapitalization of existing USCG equipment at an approximate rate of 20%.
- Procured rad/nuc detection systems to satisfy USCG requirements, including 788 PRDs, 118 RIIDs and 33 backpack systems. Purchased an additional 4 High Purity Germanium (HPGe) RIIDs to support future standup of an additional deployable, specialized unit.
- Utilizing multi-year funds appropriated in FY 2009 during FY 2010, deliver an additional 788 PRDs and 118 RIIDs to satisfy USCG requirements.

FY 2010 planned accomplishments:

- No funding was requested nor provided for this activity in FY 2010.

FY 2011 planned accomplishments:

- Procure rad/nuc detection systems to satisfy USCG requirements. Current planning figures for the USCG JAS in FY 2011 include approximately 800 PRDs (current and next generation, as available), 100 RIIDs and 30 backpack systems depending on the availability of He3 gas or other approved neutron detectors for the backpacks. Following the Dolphin on-the-water testing (see the RD&O appropriation justification for additional details), DNDO will begin the initial purchase of boat-mounted detection equipment for the USCG.

**West Coast Maritime Pilot Program:** This pilot program supports the DHS Small Vessel Security Strategy specific objective to develop a robust layered defense by expanding and enhancing maritime radiological/nuclear detection capabilities for international, Federal, State, local, tribal, and private stakeholders. Consequently, the focus of this effort is to evaluate the effectiveness of a limited-phased deployment of commercially available and Government-Off-The-Shelf rad/nuc detection capabilities against the small vessel threat in the Puget Sound and San Diego regions and gather lessons learned to support a wider deployment of maritime capabilities to other priority U.S. ports.

### **Accomplishments in Systems Acquisition for the West Coast Maritime Pilot Program:**

Significant accomplishments in FY 2009 include:

- Procured 224 PRDs, 12RIIDs, and one HPGe RIID backpacks for Federal, State, and local entities participating in the West Coast Maritime pilot in Puget Sound and San Diego.
- Acquired and deployed (on a limited basis) boat-mounted detectors for the Federal, State and local stakeholders that will develop and evaluate CONOPs, protocols and alarm adjudication.
- Utilizing prior year funding, procure PRDs, RIIDs, and backpacks for Federal, State, and local entities participating in the West Coast Maritime pilot, in Puget Sound and San Diego, to augment pilot program capabilities (to be accomplished in FY 2010).

FY 2010 planned accomplishments:

- No funding was requested nor provided for this activity in FY 2010.

FY 2011 planned accomplishments:

- This activity will be finalizing its efforts and no further acquisition of equipment is planned. No further accomplishments; pilot efforts are to be completed in December 2010.

## IV. Program Justification Changes

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Systems Acquisition:  
Radiation Portal Monitor Program  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 1:**                      Radiation Portal Monitoring Program  
PPA:    Radiation Portal Monitor Program  
Program Increase:                      Positions 0.0, FTE 0.0, Dollars \$8,000.0

Funding Profile

	FY 2009 Actuals			FY 2010 Enacted			FY 2011 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							-	-	8,000
<b>Total Request</b>	-	-	<b>93,021</b>	-	-	<b>0-</b>	-	-	<b>8,000</b>

Description:

The request for the Radiation Portal Monitor Program is an \$8.0 million increase above FY 2010.

Justification:

The request includes an increase of \$8 million to support the objective of the RPM Program. This program procures equipment to meet the needs of end-users, in accordance with the Global Nuclear Detection Architecture. Resumption of this funding will support the vital acquisition of a full range of equipment and technology. The Radiation Portal Monitor Program (RPMP) was established with the objectives of deploying RPMs at the United States POEs and providing the scientific and technical expertise to design, acquire, deploy, operate, and maintain these systems. Due to Congress' mandate that all containers coming in through the top 22 ports, by volume, be scanned for radiation by the end of 2007, this program must have the resources necessary to acquire and deploy commercial-off-the-shelf (COTS) first-generation polyvinyl toluene (PVT) RPMs. As DHS completes the "closure" of the Northern and Southwest Borders with rad/nuc detection capabilities, DNDO continues to address the vulnerabilities in other locations and pathways. This focus evaluates the capabilities and benefits of mobile detection solutions to better able to meet the mission requirements than the deployment of fixed solutions.

Directive / Mandate: In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to “[s]erve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

<b>Total Request</b>	-	-	<b>14,906</b>	-	-	<b>0</b>	-	-	<b>0</b>

Description:

No additional funds are requested for the Securing the Cities Initiative.

Justification:

The Securing the Cities Initiative is a pilot program that was designed to explore the feasibility of implementing architecture for coordinated detection and interdiction of illicit radiological materials within the New York City metropolitan region. This program deployed over 4,000 Personal Radiation Detectors and provided associated training to end users such as the NYPD. An assessment measuring the program’s effectiveness is planned for 2011. With the conclusion of the pilot program, New York City (NYC) regional stakeholders can continue to fund additional capabilities through other DHS programs such as the Homeland Security Grant Program if the initiative is shown to enhance capabilities and reduce the risk from a rad/nuc attack.

Directive / Mandate:

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to “[s]erve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

<b>Total Request</b>	-	-	<b>5,912</b>	-	-	<b>0</b>	-	-	<b>73,000</b>

Description:

The request for the Human Portable Radiation Detection Systems Program is a \$53.0 million increase above FY 2010.

Justification:

The Human Portable Radiation Detection Program has several programs under which it executes the critical responsibility of procuring multiple types of equipment that provide law enforcement and first responders with effective equipment for rad/nuc detection and identification. Collaborating with other DHS components and Federal agencies, DNDO has led the development of the Visible Intermodal Prevention and Response (VIPR) Teams, the Mobile Detection Deployment Program, and the USCG Joint Acquisition Strategy (JAS). The USCG JAS leverages resources to assist the USCG with achieving the DHS Secretary's goal that all USCG boarding/inspection teams have radiation detection equipment by the end of 2007, and the Phased Deployment Implementation Plan (PDIP), an effort that has developed a prioritized schedule for system deployment. Handheld detection units and PRDs will be procured for CBP-OBP in FY 2011 based upon the deployment schedule. Current or next-generation systems will be procured based upon availability. These efforts, and associated resources, are vital to the continuity and effectiveness of the mission of deploying rad/nuc detection equipment.

Directive / Mandate:

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to "[s]erve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store,

transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

### PPA Mission Statement

The Radiation Portal Monitor (RPM) Program was established at CBP in January 2002 with the objective of deploying RPMs at ports of entry (POEs) and providing the scientific and technical expertise to design, acquire, deploy, operate and maintain these systems. In 2005, DNDO assumed the responsibility of designing, acquiring and deploying the systems, and it has established a Ports of Entry program to work with CBP to bring the latest technology to bear on the threat of illicit nuclear materials crossing our borders. A detector based on Polyvinyl-Toluene technology (PVT) has been developed and is being deployed. These efforts are part of the multi-layered strategy to keep U.S. ports safe and secure by interdicting rad/nuc materials in five transport vectors: international mail and express consignment courier facilities (ECCFs), seaport terminals, international airports, land crossings, and rail crossings.

### Summary Justification and Explanation of Changes

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.1 Advisory and assistance services	2,631	-	-	-

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2011 request is \$0 which is no change from FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.3 Purchases of goods & svcs. from Gov't accounts	43,269	49,684	-	(49,684)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2011 request is \$0 which is a decrease of \$49.684 million from the expected expenditure of carryover funds during FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.7 Operation and maintenance of equipment	15,950	-	-	-

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2011 request is \$0 which is no change from FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
31.0 Equipment	31,171	31,984	8,000	(23,984)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2011 request is \$8.0 million which is a decrease of \$23.984 million from the expected expenditure of carryover funds during FY 2010.

<b>Full Time Equivalents</b>	-	-	-	-

**PPA Mission Statement**

The Securing the Cities Initiative was set up to design and implement detection architecture to prevent illicit radiological materials from being used as a weapon within a major urban area. This initial engagement of this initiative concluded at the end of FY2009. The initial STC engagement was conducted with the New York City (NYC) region, defined as within 45 miles of the NYC city limits. STC stakeholders include NYC (especially the New York Police Department), the counties proximate to NYC, the State of New York, the State of New Jersey, the State of Connecticut, the Port Authority of New York/New Jersey (PANY/NJ) and the Metropolitan Transportation Authority (MTA).

**Summary Justification and Explanation of Changes**

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.1 Advisory and assistance services	1,243	1,500	-	(1,500)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2011 request is \$0 which is a decrease of \$1.500 million from the expected expenditure of carryover funds in FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.2 Other services	1,000	-	-	-

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.2 Other services	1,000	-	-	-

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2011 request is \$0 which is no change from FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.3 Purchases of goods & svcs. from Gov't accounts	1,043	6,588	-	(6,588)

Purchases from government accounts include costs for purchases from other Federal government agencies or accounts that are not otherwise classified. Funds will be used for installation, integration, and deployment activities at ports of entry and other domestic locations, as outlined in the current services section. The FY 2011 request is \$0 which is a decrease of \$6.588 million from the planned expenditure of carryover funds during FY 2010.

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.7 Operation and maintenance of equipment	11,550	-	-	-

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2011 request is \$0 which is no change from FY 2010.

**PPA Mission Statement**

The HPRDS program is structured to provide a wide variety of law enforcement and first-responder services with the capability to detect and identify terrorist nuclear explosive devices or radiation dispersal devices (RDDs). HPRDS provides key radiation detection, threat source identification, and notification capabilities to aid law enforcement officers in mitigating terrorist nuclear threats in both POE and non-POE locations. HPRDS fills existing shortfalls through either commercial-off-the-shelf (COTS) solutions tailored to existing concepts of operations (CONOPs) and operating environments or, in instance where COTS systems are demonstrated to be inadequate, the development of cutting edge technology, which are used as primary detection tools by Customs officers, Border Patrol agents, and USCG personnel. State and local law enforcement agencies and first responders use this equipment for queued search and secondary identification operations.

**Summary Justification and Explanation of Changes**

	FY 2009 Actuals	FY 2010 Enacted	FY 2011 Request	FY 2010 to FY 2011 Change
25.1 Advisory and assistance services	696	-	-	-

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. ## A. Mission and Description of Component

Key to the success of the Department of Homeland Security is improving the Department's ability to mitigate risks across the entire threat spectrum. In recognition of the catastrophic risk posed by the use of a nuclear weapon within the United States, the Domestic Nuclear Detection Office (DNDO) was chartered on April 15, 2005, through National Security Presidential Directive 43/Homeland Security Presidential Directive 14 (NSPD-43/HSPD-14). DNDO's primary focus is on the radiological/nuclear (rad/nuc) threat posed by non-state actors. DNDO is the lead Federal agency to develop a Global Nuclear Detection Architecture (GNDA) that will contribute to a robust, layered rad/nuc defense of the United States; enhance and coordinate rad/nuc detection efforts across Federal agencies, as well as state and local governments; coordinate rad/nuc detection technology research and development (R&D) programs; lead the effort to develop advanced nuclear forensics capabilities for pre-detonation materials and coordinating the USG National Technical Nuclear Forensics (NTNF) capability; and build the core technical expertise and conduct the R&D needed to support rad/nuc response and recovery efforts.

The DNDO has the primary responsibility within the Department of Homeland Security to integrate efforts across the Department in combating the threat of nuclear attack. The DNDO is the lead Departmental representative for all interagency activities to coordinate the U.S. Government (USG) nuclear defense posture. To meet this diverse mission, the DNDO is jointly-staffed with representatives from the Department of Defense, Department of Energy, Department of Justice's Federal Bureau of Investigation, the State Department, and the Nuclear Regulatory Commission, as well as DHS components, including the Science and Technology Directorate, U.S. Customs and Border Protection, the Transportation Security Administration, and the U.S. Coast Guard. DNDO leverages an interagency approach to improve nuclear detection capabilities across the mission space as defined in the GNDA.

DNDO's principal offices are in the Washington, D.C. area with program functions being performed around the Nation at National laboratories and other Federal facilities.

## B. Major Programs and Key Strategic Goals

DNDO's primary focus is on activities such as developing the GNDA, enhancing deterrence, enabling detection of rad/nuc material, testing and evaluating rad/nuc detection systems, and determining the source of nuclear material through nuclear forensics. Specifically, DNDO supports, assists, and encourages R&D that has a nexus to rad/nuc detection. Further, DNDO tests and evaluates these new technologies as well as commercial-off-the-shelf detection systems. DNDO also provides training, exercises, situational awareness, and other operational support activities to the user communities.

The FY 2011 President's Budget transfers DNDO's Transformational Research and Development program from DNDO to the DHS Science and Technology Directorate.

The goals of DNDO are:

- Goal 1: Lead USG efforts to further develop an enhanced GNDA through a layered defense-in-depth approach to the detection and interdiction of illicit rad/nuc materials.

- Goal 2: Strengthen the GNDA beyond U.S. borders through strategic collaboration with international partners.
- Goal 3: Strengthen the Nation's ability to detect and report rad/nuc threats at the border in conjunction with Federal, state, and local partners.
- Goal 4: Strengthen interior preventive detection and reporting capabilities to reduce the risk to large cities and critical infrastructure in coordination with state and local partners.
- Goal 5: Strengthen NTNF capabilities to enable deterrence and attribution of rad/nuc threats and attacks.
- Goal 6: Strengthen the foundation and infrastructure of the GNDA through continuously improving operational support and situational awareness.
- Goal 7: Continuously improve DNDO personnel, processes, and Enterprise Architecture, while optimizing the organizational structure.

### C. Resources Requested and Performance Impact

In FY 2011, the President's Budget Request includes \$305.820 million for the activities of DNDO. Requested funds provide for the continuation of DNDO's support of the Department's strategic mission and goals by serving as the primary organization within the Department to integrate efforts across DHS in combating the threat of nuclear attack, including all test and evaluation of nuclear detection systems. Specific emphasis has been placed on systems studies, as well as testing and piloting existing technologies in new operational environments, while less funding has been requested for the development of technical solutions. This emphasis reflects a shift in DNDO priorities to developing a wider range of potential solutions to enduring vulnerabilities in the global nuclear detection architecture.

To ensure that all technologies developed through these activities are fully characterized prior to deployment, the President's Budget Request includes \$43.465 million to develop and maintain a robust assessment capability, including developmental and operational test and evaluation, pilots, red teaming, and net assessments. As part of this effort, DNDO will conduct high-fidelity test campaigns in FY 2011 to assess the effectiveness of currently available handheld, mobile, and vehicle-based detection systems.

The Budget also requests \$61.0 million in new funding for acquisition of equipment for FY 2011.

### D. Performance Highlights, Resources, and Alignment to Strategic Goals

For each mission-oriented program, the program performance goal, total dollars and FTE, and Government Performance and Results Act (GPRA) performance plan measure/s are shown below. Additional measures are also displayed, as appropriate, to provide a more thorough context of expected performance results.

**Performance Budget Highlights by Program**

DNDO  
2011 OMB

<b>Program: Domestic Nuclear Detection</b>						
<b>Performance Goal:</b> Improve the Nations capability to detect and report unauthorized attempts to import, possess, store, develop, or transport radiological or nuclear material for use against the Nation.						
<b>Secretary's Priority: Preventing Terrorism and Enhancing Security; Mission Support</b>						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>\$ Thousands</b>	\$317,392	\$615,968	\$484,750	\$514,191	\$383,037	\$305,820
<b>FTE</b>	14	112	121	130	130	122

**Performance Plan Measures**

<b>Measure:</b> Percent of containerized cargo conveyances that pass through fixed radiation portal monitors at sea ports of entry.						
<b>Description of Measure:</b> This measure gauges the amount of containerized cargo scanned by the radiation detection equipment deployed to the Nation's sea ports of entry. It is expressed in terms of the percent that is scanned by fixed radiation portal monitors of the total number of containerized cargo conveyances entering the nation through sea ports of entry. The percent of cargo scanned is affected by the number of fixed radiation portal monitors deployed at all possible sea points of entry.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	FOUO	FOUO	FOUO
<b>Actual:</b>	None	None	None	FOUO	N/A	N/A

<b>Measure:</b> Percent of cargo conveyances that pass through radiation detection systems upon entering the nation via land border and international rail ports of entry.						
<b>Description of Measure:</b> This measure gauges the amount of cargo conveyances scanned by radiation detection equipment deployed to the Nation's land border crossing ports of entry and international rail ports of entry. It is expressed in terms of the percent that is scanned by fixed, mobile, and hand-held radiation detection equipment of the total number of cargo conveyances entering the nation through land ports of entry and by international rail. The percent of cargo scanned is affected by the amount of radiation detection equipment deployed at all possible such points of entry.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	FOUO	FOUO	FOUO
<b>Actual:</b>	None	None	None	FOUO	N/A	N/A

<b>Measure:</b> Percent of international air cargo that passes through radiation detection systems before entering the nation.						
<b>Description of Measure:</b> This measure gauges the amount of international air cargo scanned by radiation detection equipment deployed to the Nation's international cargo aviation airports (U.S. air ports of entry). It is expressed in terms of the percent of the total amount of air cargo entering the Nation through the aviation pathway that is scanned using fixed and non-fixed radiation detection equipment. The percent of cargo scanned is affected by the amount of fixed and non-						

fixed radiation detection equipment deployed at all possible air ports of entry.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	None	FOUO	FOUO	FOUO
<b>Actual:</b>	None	None	None	FOUO	N/A	N/A

<b>Measure:</b> Number of graduate fellowships, university education awards, and academic research awards in nuclear forensics and detection-related specialties.						
<b>Description of Measure:</b> This measure gauges the total number of graduate student fellowships in nuclear forensics-related specialties, education awards to universities to support nuclear forensics-related academic programs, and academic research grants awarded in nuclear detection and forensics per fiscal year. Recipients for the Nuclear Forensics Graduate Fellowship Program, the Nuclear Forensics Education Award Program, and the Academic Research Initiative are selected from a competitive, merit-based application process. These awards ensure that appropriately trained technical personnel will continue to be available, maintaining and enhancing the Nation's "nuclear expertise pipeline" and increasing the deterrent effect of a robust nuclear defense capability. The Domestic Nuclear Detection Office (DNDO) oversees all three of these initiatives.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	4	15	28	29
<b>Actual:</b>	None	None	13	18	N/A	N/A

<b>Measure:</b> Number of states, urban areas, and other vulnerable urban localities with a basic Preventive Radiological and Nuclear Detection program.						
<b>Description of Measure:</b> This measure identifies the number of states, Urban Area Security Initiative (UASI) urban areas, and other vulnerable urban localities having a basic Preventive Radiological and Nuclear Detection (PRND) program. A basic PRND program is defined as having radiation detection equipment in place, the requisite training of relevant stakeholders, appropriate procedures implemented, technical support, and the programmatic structure to maintain this capability.						
<b>Fiscal Year:</b>	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011
<b>Target:</b>	None	None	8	10	16	20

*\*The FY09 column indicates revised enacted levels including supplemental appropriations such as Recovery Act funding. This differs from the other sections of the CJ and is intended to align with the resource levels contained in the Future Years Homeland Security Program (FYHSP) which captures total budget authority.*

**Department of Homeland Security**  
**FY 2011 Explanation of Changes - General Provisions**

**Proposal to Delete Language from Section 503:**

SEC. 503. (a) None of the funds provided by this Act, provided by previous appropriations Acts to the agencies in or transferred to the Department of Homeland Security that remain available for obligation or expenditure in fiscal year [2010] *2011*, or provided from any accounts in the Treasury of the United States derived by the collection of fees available to the agencies funded by this Act, shall be available for obligation or expenditure through a reprogramming of funds that: (1) creates a new program, project, or activity; (2) eliminates a program, project, office, or activity; *or* (3) increases funds for any program, project, or activity for which funds have been denied or restricted by the Congress[; **(4) proposes to use funds directed for a specific activity by either of the Committees on Appropriations of the Senate or the House of Representatives for a different purpose; or (5) contracts out any function or activity for which funding levels were requested for Federal full-time equivalents in the object classification tables contained in the fiscal year] 2010 [Budget Appendix for the Department of Homeland Security, as modified by the explanatory statement accompanying this Act], unless the Committees on Appropriations of the Senate and the House of Representatives are notified 15 days in advance of such reprogramming of funds.**

(b) None of the funds provided by this Act, provided by previous appropriations Acts to the agencies in or transferred to the Department of Homeland Security that remain available for obligation or expenditure in fiscal year [2010] *2011*, or provided from any accounts in the Treasury of the United States derived by the collection of fees or proceeds available to the agencies funded by this Act, shall be available for obligation or expenditure for programs, projects, or activities through a reprogramming of funds in excess of \$5,000,000 or 10 percent, whichever is less, that: (1) augments existing programs, projects, or activities; (2) reduces by 10 percent funding for any existing program, project, or activity, or numbers of personnel by 10 percent [as approved by the Congress]; or (3) results from any general savings from a reduction in personnel that would result in a change in existing programs, projects, or activities as [approved by the Congress], unless the Committees on Appropriations of the Senate and the House of Representatives are notified 15 days in advance of such reprogramming of funds.

(c) Not to exceed 5 percent of any appropriation made available for the current fiscal year for the Department of Homeland Security by this Act or provided by previous appropriations Acts may be transferred between such appropriations, but no such appropriation, except as otherwise specifically provided, shall be increased by more than 10 percent by such transfers: *Provided*, That any transfer under this section shall be treated as a reprogramming of funds under subsection (b) and shall not be available for obligation unless the Committees on Appropriations of the Senate and the House of Representatives are notified 15 days in advance of such transfer.

**[(d) Notwithstanding subsections (a), (b), and (c) of this section, no funds shall be reprogrammed within or transferred between appropriations after June 30, except in extraordinary circumstances that imminently threaten the safety of human life or the protection of property.]**

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

Explanation: For item (4), language is proposed for deletion to eliminate potential inconsistencies in reconciling House Reports, Senate Reports and the Joint Explanatory Statement. For item (5), language is proposed for deletion to eliminate the restrictions on contracting out functions for which funds have been appropriated for Federal FTEs. Circumstances may warrant from time to time that contracting out functions can be prudent and judicious use of federal funding resources. Item (d) is proposed for deletion to provide the Department with greater flexibility with respect to timing of potential reprogrammings.

**Proposal to Delete Language from Section 510:**

SEC. 510. Sections [519,] 520, [522,] 528, [530,] and 531 of the Department of Homeland Security Appropriations Act, 2008 (division E of Public Law 110-161; 121 Stat. 2072, 2073, 2074, 2082) shall apply with respect to funds made available in this Act in the same manner as such sections applied to funds made available in that Act.

The sections proposed for deletion are outlined below:

**SEC. 519. None of the funds made available in this Act may be used by any person other than the Privacy Officer appointed under section 222 of the Homeland Security Act of 2002 (6 U.S.C. 142) to alter, direct that changes be made to, delay, or prohibit the transmission to Congress of any report prepared under paragraph (6) of such section.**

Explanation: This provision is proposed for deletion as it is inconsistent with the President's constitutional authority to coordinate and supervise all replies and comments from the Executive Branch to Congress.

**SEC. 522. Section 525(d) of the Department of Homeland Security Appropriations Act, 2007 (Public Law 109-295; 120 Stat. 1382) shall apply to fiscal year 2008.**

Explanation: This provision is proposed for deletion because the management directive has been modified.

**SEC. 530. None of the funds made available in this Act maybe used in contravention of section 303 of the Energy Policy Act of 1992 (42 U.S.C. 13212).**

Explanation: This provision is proposed for deletion because it is already required by codified law.

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

**Proposal to Delete *Old* Section 513:**

**[SEC. 512. None of the funds made available in this Act may be used to amend the oath of allegiance required by section 337 of the Immigration and Nationality Act (8 U.S.C. 1448).**

Explanation: DHS has stated in the past that the Executive Branch should continue to be responsible for the actual language of the Oath of Renunciation and Allegiance. Through the Immigration and Nationality Act, Congress has already provided a clear mandate on the necessary content and substance of the Oath.

**Proposal to Delete old Section 514**

**[SEC. 514. (a) The Assistant Secretary of Homeland Security (Transportation Security Administration) shall work with air carriers and airports to ensure that the screening of cargo carried on passenger aircraft, as defined in section 44901(g)(5) of title 49, United States Code, increases incrementally each quarter until the requirement of section 44901(g)(2)(B) of title 49 is met.**

**(b) Not later than 45 days after the end of each quarter, the Assistant Secretary shall submit to the Committees on Appropriations of the Senate and the House of Representatives a report on air cargo inspection statistics by airport and air carrier detailing the incremental progress being made to meet the requirement of section 44901(g)(2)(B) of title 49, United States Code.**

**(c) Not later than 180 days after the date of the enactment of this Act, the Assistant Secretary shall submit to the Committees on Appropriations of the Senate and the House of Representatives, a report on how the Transportation Security Administration plans to meet the requirement for screening all air cargo on passenger aircraft by the deadline under section 44901(g) of title 49, United States Code. The report shall identify the elements of the system to screen 100 percent of cargo transported between domestic airports at a level of security commensurate with the level of security for the screening of passenger checked baggage.]**

Explanation: This provision is proposed for deletion because screening air cargo is already a high priority for the Department. The Department will provide the required information regardless of this provision.

**Proposal to Delete *Old* Section 516:**

**[SEC. 516. Except as provided in section 44945 of title 49, United States Code, funds appropriated or transferred to Transportation Security Administration "Aviation Security", "Administration" and "Transportation Security Support" for fiscal years 2004, 2005, 2006, and 2007 that are recovered or deobligated shall be available only for the procurement or installation of explosives detection systems, for air cargo, baggage, and checkpoint screening systems, subject to notification: *Provided,***

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

**That quarterly reports shall be submitted to the Committees on Appropriations of the Senate and the House of Representatives on any funds that are recovered or deobligated.]**

Explanation: This provision is proposed for deletion in an effort to provide greater flexibility in the use of appropriated resources and to consider the most pressing needs in the Department's efforts to protect the Homeland.

**Proposal to Delete Old Section 517:**

**[SEC. 517. Any funds appropriated to United States Coast Guard, "Acquisition, Construction, and Improvements" for fiscal years 2002, 2003, 2004, 2005, and 2006 for the 110-123 foot patrol boat conversion that are recovered, collected, or otherwise received as the result of negotiation, mediation, or litigation, shall be available until expended for the Replacement Patrol Boat (FRC-B) program.]**

Explanation: This provision has appeared in the last several appropriations acts and previous appropriations acts provide sufficient authority to extend funds for the Replacement Patrol Boat program.

**Proposal to Delete Old Section 518:**

**[SEC. 518. (a) None of the funds provided by this or any other Act may be obligated for the development, testing, deployment, or operation of any portion of a human resources management system authorized by section 9701(a) of title 5, United States Code, or by regulations prescribed pursuant to such section, for an employee, as that term is defined in section 7103(a)(2) of such title.**

**(b) The Secretary of Homeland Security shall collaborate with employee representatives in the manner prescribed in section 9701(e) of title 5, United States Code, in the planning, testing, and development of any portion of a human resources management system that is developed, tested, or deployed for persons excluded from the definition of employee as that term is defined in section 7103(a)(2) of such title.]**

Explanation: The department has withdrawn its coverage under 5 U.S.C. 9701 and therefore this provision is unnecessary.

**Proposal to Delete Old Section 522:**

**[SEC. 522. Except as provided in paragraphs (1) and (2) of this section, none of the funds provided by this or previous appropriations Acts shall be used to fund any position designated as a Principal Federal Official, or any successor position, for any Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.) declared disasters or emergencies—**

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

**(1) The Secretary of Homeland Security may waive the application of this section provided that any field position appointed pursuant to this waiver shall not hold the title of Principal Federal Official, shall functionally report through the Federal Coordinating Officer appointed under section 302 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5143), and shall be subject to the provisions of subsection (c) of section 319 of title 6, United States Code. The Secretary may not delegate the authority to grant such a waiver.**

**(2) Not later than 10 business days after the date on which the Secretary of Homeland Security issues a waiver under this section, the Secretary shall submit notification of that waiver to the Committees on Appropriations of the Senate and the House of Representatives, the Transportation and Infrastructure Committee of the House of Representatives, and the Homeland Security and Governmental Affairs Committee of the Senate explaining the circumstances necessitating the waiver, describing the specific role of any officials appointed pursuant to the waiver, and outlining measures taken to ensure compliance with subsection (c) of section 319 and subsections (c)(3) and (c)(4)(A) of section 313 of title 6, United States Code.]**

Explanation: While the Department appreciates the modification of this provision from previous year's appropriation act, this provision is still overly restrictive and creates an additional administrative burden on the Department, during a Stafford Act event.

**Proposal to Delete *Old* Section 524:**

**[SEC. 524. Funds made available in this Act may be used to alter operations within the Civil Engineering Program of the Coast Guard nationwide, including civil engineering units, facilities design and construction centers, maintenance and logistics commands, and the Coast Guard Academy, except that none of the funds provided in this Act may be used to reduce operations within any Civil Engineering Unit unless specifically authorized by a statute enacted after the date of the enactment of this Act.]**

Explanation: This provision is proposed for deletion in an effort to provide greater flexibility in the use of appropriated resources and to consider the most pressing needs in the Department's efforts to protect the Homeland.

**Proposal to Delete *Old* Section 525:**

**[SEC. 525. None of the funds provided in this Act shall be available to carry out section 872 of Public Law 107-296.]**

Explanation: This provision is proposed for deletion to provide the Department with greater flexibility in carrying out its requirements for protecting the Homeland and responding to contingency operations.

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

**Proposal to Delete *Old* Section 528:**

**[SEC. 528. None of the funds provided in this Act under the heading "Office of the Chief Information Officer" shall be used for data center development other than for the National Center for Critical Information Processing and Storage until the Chief Information Officer certifies that the National Center for Critical Information Processing and Storage is fully utilized as the Department's primary data storage center at the highest capacity throughout the fiscal year.]**

Explanation: This provision is proposed for deletion because it was a one-time directive.

**Proposal to Delete *Old* Section 529:**

**[SEC. 529. None of the funds in this Act shall be used to reduce the United States Coast Guard's Operations Systems Center mission or its government-employed or contract staff levels.]**

Explanation: This provision is proposed for deletion to provide the Department with greater flexibility in carrying out its requirements for protecting the Homeland and in the use of appropriated resources.

**Proposal to Delete *Old* Section 530:**

**[SEC. 530. None of the funds appropriated by this Act may be used to conduct, or to implement the results of, a competition under Office of Management and Budget Circular A-76 for activities performed with respect to the Coast Guard National Vessel Documentation Center.]**

Explanation: There is already an annual Government-wide general provision, most recently contained in Section 737 of the FY 2010 Omnibus Appropriation Act, P.L. 111-8.

**Proposal to Delete Language from *Old* Section 538:**

**[SEC. 538. If the Assistant Secretary of Homeland Security (Transportation Security Administration) determines that an airport does not need to participate in the basic pilot program (E-Verify Program) under section 402 of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (8 U.S.C. 1324a note), the Assistant Secretary shall certify to the Committees on Appropriations of the Senate and the House of Representatives that no security risks will result from such non-participation.]**

Explanation: Existing TSA requirements imposed by TSA through Security Directives are an effective alternative to determine lawful presence in the United States. TSA's

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

ability to require participation in the E-Verify Program is limited; the program is primarily voluntary in nature. Certifying that non-participation constitutes "no security risk" is a difficult standard to quantify and far more rigorous than the "no significant risk" standard employed by Congress for the butane lighter provision.

**Proposal to Delete Old Section 539:**

**[SEC. 539. (a) Notwithstanding any other provision of this Act, except as provided in subsection (b), and 30 days after the date that the President determines whether to declare a major disaster because of an event and any appeal is completed, the Administrator shall submit to the Committee on Homeland Security and Governmental Affairs of the Senate, the Committee on Homeland Security of the House of Representatives, the Committee on Transportation and Infrastructure of the House of Representatives, the Committees on Appropriations of the Senate and the House of Representatives, and publish on the website of the Federal Emergency Management Agency, a report regarding that decision, which shall summarize damage assessment information used to determine whether to declare a major disaster.(b) The Administrator may redact from a report under subsection (a) any data that the Administrator determines would compromise national security. (c) In this section— (1) the term "Administrator" means the Administrator of the Federal Emergency Management Agency; and (2) the term "major disaster" has the meaning given that term in section 102 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5122).]**

Explanation: This provision is proposed for deletion because it was a one-time directive.

**Proposal to Delete Old Section 540:**

**SEC. [540]. Notwithstanding any other provision of law, *in the current fiscal year or a subsequent fiscal year*, should the Secretary of Homeland Security determine that the National Bio and Agro-defense Facility be located at a site other than Plum Island, New York, the Secretary shall liquidate the Plum Island asset by directing the Administrator of General Services to sell through public sale all real and related personal property and transportation assets which support Plum Island operations, subject to such terms and conditions as necessary to protect government interests and meet program requirements: *Provided*, That the [gross] proceeds of such sale shall be deposited as offsetting collections into the Department of Homeland Security Science and Technology "Research, Development, Acquisition, and Operations" account and, subject to appropriation, shall be available until expended, for site acquisition, construction, and costs related to the construction of the National Bio and Agro-defense Facility, including the costs associated with the sale, including due diligence requirements, necessary environmental remediation at Plum Island, and reimbursement of expenses incurred by the General Services Administration [which shall not exceed 1 percent of the sale price]: *Provided further*,**

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

**That after the completion of construction and environmental remediation, the unexpended balances of funds appropriated for costs in the preceding proviso shall be available for transfer to the appropriate account for design and construction of a consolidated Department of Homeland Security Headquarters project, excluding daily operations and maintenance costs, notwithstanding section 503 of this Act, and the Committees on Appropriations of the Senate and the House of Representatives shall be notified 15 days prior to such transfer.**

Explanation: Proposed deletions alleviate fiscal law concerns and allow GSA to operate in advance of determining the actual price for of the proposed sale. In addition, words of futurity (in the current fiscal year or a subsequent fiscal year) make this a permanent provision.

**Proposal to Delete *Old Section 541:***

**[SEC. 541. The explanatory statement referenced in section 4 of Public Law 110–161 for "National Predisaster Mitigation Fund" under Federal Emergency Management Agency is deemed to be amended—**

- (1) by striking "Dalton Fire District" and all that follows through "750,000" and inserting the following: "Franklin Regional Council of Governments, MA 250,000 Town of Lanesborough, MA 175,000 University of Massachusetts, MA 175,000";**
- (2) by striking "Santee and";**
- (3) by striking "3,000,000" and inserting "1,500,000";**
- (4) by inserting after the item relating to Adjutant General's Office of Emergency Preparedness the following: "Town of Branchville, SC 1,500,000"; and**
- (5) by striking "Public Works Department of the City of Santa Cruz, CA" and inserting "Monterey County Water Resources Agency, CA".]**

Explanation: This was a one time change to P.L. 110-161 and does not need to be repeated.

**Proposal to Delete *Old Section 542:***

**[SEC. 542. Any official that is required by this Act to report or certify to the Committees on Appropriations of the Senate and the House of Representatives may not delegate such authority to perform that act unless specifically authorized herein.]**

Explanation: This provision is proposed for deletion to provide the Department with greater flexibility on the use of its appropriated resources

**Proposal to Delete *Old Section 544:***

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

**[SEC. 544. (a) Not later than 3 months after the date of enactment of this Act, the Secretary of Homeland Security shall consult with the Secretaries of Defense and Transportation and develop a concept of operations for unmanned aircraft systems in the United States national airspace system for the purposes of border and maritime security operations.**

**(b) The Secretary of Homeland Security shall report to the Committees on Appropriations of the Senate and the House of Representatives not later than 30 days after the date of enactment of this Act on any foreseeable challenges to complying with subsection (a).]**

Explanation: This provision is proposed for deletion because it was a one-time directive.

**Proposal to Delete *Old Section 545:***

**[SEC. 545. From unobligated amounts that are available to the Coast Guard for fiscal year 2008 or 2009 for "Acquisition, Construction, and Improvements" for shore side facilities and aids to navigation at Coast Guard Sector Buffalo, the Secretary of Homeland Security shall use such sums as may be necessary to make improvements to the land along the northern portion of Sector Buffalo to enhance public access to the Buffalo Lighthouse and the waterfront.]**

Explanation: This provision is proposed for deletion because it was a one-time directive.

**Proposal to Delete *Old Section 546:***

**[SEC. 546. For fiscal year 2010 and thereafter, the Secretary may provide to personnel appointed or assigned to serve abroad, allowances and benefits similar to those provided under chapter 9 of title I of the Foreign Service Act of 1990 (22 U.S.C. 4081 et seq.).]**

Explanation: This provision is proposed for deletion because it is now a permanent provision due to the word of futurity.

**Proposal to Delete *Old Section 547:***

**[SEC. 547. Section 401(b) of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (8 U.S.C. 1324a note) is amended by striking "at the end of the 11-year period beginning on the first day the pilot program is in effect." and inserting "on September 30, 2012.".]**

Explanation: This provision is proposed for deletion because it was a one-time amendment.

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

**Proposal to Delete *Old* Section 548:**

**[SEC. 548. Section 610(b) of the Departments of Commerce, Justice, and State, the Judiciary, and Related Agencies Appropriations Act, 1993 (8 U.S.C. 1153 note) is amended by striking "for 15 years" and inserting "until September 30, 2012".]**

Explanation: This provision is proposed for deletion because it was a one-time amendment.

**Proposal to Delete *Old* Section 549:**

**[SEC. 549. (a) In addition to collection of registration fees described in section 244(c)(1)(B) of the Immigration and Nationality Act (8 U.S.C. 1254a(c)(1)(B)), fees for fingerprinting services, biometric services, and other necessary services may be collected when administering the program described in section 244 of such Act. (b) Subsection (a) shall be construed to apply for fiscal year 1998 and each fiscal year thereafter.]**

Explanation: This provision is proposed for deletion because it has permanently amended the U.S. Code.

**Proposal to Delete *Old* Section 551:**

**[SEC. 551. (a)(1) Sections 401(c)(1), 403(a), 403(b)(1), 403(c)(1), and 405(b)(2) of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (division C of Public Law 104–208; 8 U.S.C. 1324a note) are amended by striking "basic pilot program "each place that term appears and inserting "E-Verify Program". (2) The heading of section 403(a) of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 is amended by striking "Basic Pilot "and inserting "E-Verify". (b) Section 404(h)(1) of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (Public Law 104–208; 8 U.S.C. 1324a note) is amended by striking "under a pilot program "and inserting "under this subtitle".]**

Explanation: This provision is proposed for deletion because it has permanently amended the U.S. Code.

**Proposal to Delete *Old* Section 552:**

**[SEC. 552. (a) None of the funds made available in this or any other Act may be used to release an individual who is detained, as of June 24, 2009, at Naval Station, Guantanamo Bay, Cuba, into the continental United States, Alaska, Hawaii, or the**

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

**District of Columbia, into any of the United States territories of Guam, American Samoa (AS), the United States Virgin Islands (USVI), the Commonwealth of Puerto Rico and the Commonwealth of the Northern Mariana Islands (CNMI).**

**(b) None of the funds made available in this or any other Act may be used to transfer an individual who is detained, as of June 24, 2009, at Naval Station, Guantanamo Bay, Cuba, into the continental United States, Alaska, Hawaii, or the District of Columbia, into any of the United States territories of Guam, American Samoa (AS), the United States Virgin Islands (USVI), the Commonwealth of Puerto Rico and the Commonwealth of the Northern Mariana Islands (CNMI), for the purpose of detention, except as provided in subsection (c).**

**(c) None of the funds made available in this or any other Act may be used to transfer an individual who is detained, as of June 24, 2009, at Naval Station, Guantanamo Bay, Cuba, into the continental United States, Alaska, Hawaii, or the District of Columbia, into any of the United States territories of Guam, American Samoa (AS), the United States Virgin Islands (USVI), the Commonwealth of Puerto Rico and the Commonwealth of the Northern Mariana Islands (CNMI), for the purposes of prosecuting such individual, or detaining such individual during legal proceedings, until 45 days after the plan described in subsection (d) is received.**

**(d) The President shall submit to Congress, in classified form, a plan regarding the proposed disposition of any individual covered by subsection (c) who is detained as of June 24, 2009. Such plan shall include, at a minimum, each of the following for each such individual:**

**(1) A determination of the risk that the individual might instigate an act of terrorism within the continental United States, Alaska, Hawaii, the District of Columbia, or the United States territories if the individual were so transferred.**

**(2) A determination of the risk that the individual might advocate, coerce, or incite violent extremism, ideologically motivated criminal activity, or acts of terrorism, among inmate populations at incarceration facilities within the continental United States, Alaska, Hawaii, the District of Columbia, or the United States territories if the individual were transferred to such a facility.**

**(3) The costs associated with transferring the individual in question.**

**(4) The legal rationale and associated court demands for transfer.**

**(5) A plan for mitigation of any risks described in paragraphs (1), (2), and (7).**

**(6) A copy of a notification to the Governor of the State to which the individual will be transferred, to the Mayor of the District of Columbia if the individual will be transferred to the District of Columbia, or to any United States territories with a certification by the Attorney General of the United States in classified form at least 14 days prior to such transfer (together with supporting documentation and justification) that the individual poses little or no security risk to the United States.**

**(7) An assessment of any risk to the national security of the United States or its citizens, including members of the Armed Services of the United States, that is posed by such transfer and the actions taken to mitigate such risk.**

**(e) None of the funds made available in this or any other Act may be used to transfer or release an individual detained at Naval Station, Guantanamo Bay, Cuba, as of June 24, 2009, to the country of such individual's nationality or last habitual**

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

residence or to any other country other than the United States or to a freely associated State, unless the President submits to the Congress, in classified form, at least 15 days prior to such transfer or release, the following information:

(1) The name of any individual to be transferred or released and the country or the freely associated State to which such individual is to be transferred or released.

(2) An assessment of any risk to the national security of the United States or its citizens, including members of the Armed Services of the United States, that is posed by such transfer or release and the actions taken to mitigate such risk.

(3) The terms of any agreement with the country or the freely associated State for the acceptance of such individual, including the amount of any financial assistance related to such agreement.

(f) None of the funds made available in this Act may be used to provide any immigration benefit (including a visa, admission into the United States or any of the United States territories, parole into the United States or any of the United States territories (other than parole for the purposes of prosecution and related detention), or classification as a refugee or applicant for asylum) to any individual who is detained, as of June 24, 2009, at Naval Station, Guantanamo Bay, Cuba.

(g) In this section, the term "freely associated States" means the Federated States of Micronesia (FSM), the Republic of the Marshall Islands (RMI), and the Republic of Palau.

(h) Prior to the termination of detention operations at Naval Station, Guantanamo Bay, Cuba, the President shall submit to the Congress a report in classified form describing the disposition or legal status of each individual detained at the facility as of the date of enactment of this Act.]

Explanation: This provision permanently amended the U.S. Code.

**Proposal to Delete *Old* Section 553:**

[SEC. 553. Section 44903(j)(2)(C) of title 49, United States Code, is amended by adding at the end the following new clause:] "(v) INCLUSION OF DETAINEES ON NO FLY LIST.—The Assistant Secretary, in coordination with the Terrorist Screening Center, shall include on the No Fly List any individual who was a detainee held at the Naval Station, Guantanamo Bay, Cuba, unless the President certifies in writing to Congress that the detainee poses no threat to the United States, its citizens, or its allies. For purposes of this clause, the term 'detainee' means an individual in the custody or under the physical control of the United States as a result of armed conflict.'".

Explanation: This provision modified the US. Code permanently.

**Proposal to Delete *Old* Section 554:**

[SEC. 554. For fiscal year 2010 and thereafter, the Secretary of Homeland Security may collect fees from any non-Federal participant in a conference, seminar,

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

**exhibition, symposium, or similar meeting conducted by the Department of Homeland Security in advance of the conference, either directly or by contract, and those fees shall be credited to the appropriation or account from which the costs of the conference, seminar, exhibition, symposium, or similar meeting are paid and shall be available to pay the costs of the Department of Homeland Security with respect to the conference or to reimburse the Department for costs incurred with respect to the conference: *Provided*, That in the event the total amount of fees collected with respect to a conference exceeds the actual costs of the Department of Homeland Security with respect to the conference, the amount of such excess shall be deposited into the Treasury as miscellaneous receipts: *Provided further*, That the Secretary shall provide a report to the Committees on Appropriations of the Senate and the House of Representatives not later than January 5, 2011, providing the level of collections and a summary by agency of the purposes and levels of expenditures for the prior fiscal year, and shall report annually thereafter.]**

Explanation: This provision is permanent and does not need to be included.

**Proposal to Delete *Old Section 555*:**

**[SEC. 555. For purposes of section 210C of the Homeland Security Act of 2002 (6 U.S.C. 124j) a rural area shall also include any area that is located in a metropolitan statistical area and a county, borough, parish, or area under the jurisdiction of an Indian tribe with a population of not more than 50,000.]**

Explanation: This provision modified the US. Code permanently.

**Proposal to Delete *Old Section 559*:**

**[SEC. 559. (a) Subject to subsection (b), none of the funds appropriated or otherwise made available by this Act may be available to operate the Loran-C signal after January 4, 2010.**

**(b) The limitation in subsection (a) shall take effect only if:**

- (1) the Commandant of the Coast Guard certifies that the termination of the operation of the Loran-C signal as of the date specified in subsection (a) will not adversely impact the safety of maritime navigation; and**
- (2) the Secretary of Homeland Security certifies that the Loran-C system infrastructure is not needed as a backup to the Global Positioning System or to meet any other Federal navigation requirement.**

**(c) If the certifications described in subsection (b) are made, the Coast Guard shall, commencing January 4, 2010, terminate the operation of the Loran-C signal and commence a phased decommissioning of the Loran-C system infrastructure.**

**(d) Not later than 30 days after such certifications pursuant to subsection (b), the Commandant shall submit to the Committees on Appropriations of the Senate and House of Representatives a report setting forth a proposed schedule for**

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

the phased decommissioning of the Loran-C system infrastructure in the event of the decommissioning of such infrastructure in accordance with subsection (c).  
(e) If the certifications described in subsection (b) are made, the Secretary of Homeland Security, acting through the Commandant of the Coast Guard, may, notwithstanding any other provision of law, sell any real and personal property under the administrative control of the Coast Guard and used for the Loran-C system, by directing the Administrator of General Services to sell such real and personal property, subject to such terms and conditions that the Secretary believes to be necessary to protect government interests and program requirements of the Coast Guard: *Provided*, That the proceeds, less the costs of sale incurred by the General Services Administration, shall be deposited as offsetting collections into the Coast Guard "Environmental Compliance and Restoration" account and, subject to appropriation, shall be available until expended for environmental compliance and restoration purposes associated with the Loran-C system, for the costs of securing and maintaining equipment that may be used as a backup to the Global Positioning System or to meet any other Federal navigation requirement, for the demolition of improvements on such real property, and for the costs associated with the sale of such real and personal property, including due diligence requirements, necessary environmental remediation, and reimbursement of expenses incurred by the General Services Administration: *Provided further*, That after the completion of such activities, the unexpended balances shall be available for any other environmental compliance and restoration activities of the Coast Guard.]

Explanation: This provision has already been implemented by the Department and the Coast Guard.

**Proposal to Delete *Old Section 560*:**

[SEC. 560. (a) None of the funds made available by this Act may be obligated for construction of the National Bio- and Agro-defense Facility on the United States mainland until 30 days after the later of:  
(1) the date on which the Secretary of Homeland Security submits to the Committee on Appropriations of the Senate and the House of Representatives a site-specific bio-safety and bio-security mitigation risk assessment, which includes an integrated set of analyses using plume modeling and epidemiologic impact modeling, to determine the requirements necessary to ensure safe operation of the National Bio and Agro-defense Facility at the approved Manhattan, Kansas, site identified in the January 16, 2009, record of decision published in Federal Register Vol. 74, Number 11, and the results of the National Academy of Sciences' review of the risk assessment as described in paragraph (b): *Provided*, That the integrated set of analyses is to determine the extent of the dispersion of the foot-and-mouth virus following a potential laboratory spill, the potential spread of foot-and-mouth disease in the surrounding susceptible animal population, and its economic impact:

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

*Provided further*, That the integrated set of analyses should also take into account specific local, State, and national risk mitigation strategies; or  
(2) the date on which the Secretary of Homeland Security, in coordination with the Secretary of Agriculture, submits to the Committees on Appropriations of the Senate and the House of Representatives a report that:  
(A) describes the procedure that will be used to issue the permit to conduct foot-and-mouth disease live virus research under section 7524 of the Food, Conservation, and Energy Act of 2008 (21 U.S.C. 113a note; Public Law 110–246); and  
(B) includes plans to establish an emergency response plan with city, regional, and State officials in the event of an accidental release of foot-and-mouth disease or another hazardous pathogen.  
(b) With regard to the integrated set of analyses included in the mitigation risk assessment required under paragraph (a)(1), the Secretary of Homeland Security shall enter into a contract with the National Academy of Sciences to evaluate the mitigation risk assessment required by subsection (a)(1) of this section and to submit a Letter Report: *Provided*, That such contract shall be entered into within 90 days from the date of enactment of this Act, and the National Academy of Sciences shall complete its assessment and submit its Letter Report within four months after the date the Department of Homeland Security concludes the risk assessment.]

Explanation: This provision permanently amended the U.S. Code.

**Proposal to Delete Old Section 561:**

[SEC. 561. (a) **SHORT TITLE.**—This section may be cited as the "American Communities' Right to Public Information Act".  
(b) **IN GENERAL.**—Section 70103(d) of title 46, United States Code, is amended to read as follows:]  
"(d) **NONDISCLOSURE OF INFORMATION.**—  
"(1) **IN GENERAL.**—Information developed under this section or sections 70102, 70104, and 70108 is not required to be disclosed to the public, including—  
"(A) facility security plans, vessel security plans, and port vulnerability assessments; and  
"(B) other information related to security plans, procedures, or programs for vessels or facilities authorized under this section or sections 70102, 70104, and 70108.  
"(2) **LIMITATIONS.**—Nothing in paragraph (1) shall be construed to authorize the designation of information as sensitive security information (as defined in section 1520.5 of title 49, Code of Federal Regulations)—  
"(A) to conceal a violation of law, inefficiency, or administrative error;  
"(B) to prevent embarrassment to a person, organization, or agency;  
"(C) to restrain competition; or  
"(D) to prevent or delay the release of information that does not require protection in the interest of transportation security, including basic scientific research information not clearly related to transportation security.'".

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

**(c) CONFORMING AMENDMENTS.—**

**(1) Section 114(r) of title 49, United States Code, is amended by adding at the end thereof the following:**

**"(4)LIMITATIONS.—Nothing in this subsection, or any other provision of law, shall be construed to authorize the designation of information as sensitive security information (as defined in section 1520.5 of title 49, Code of Federal Regulations)—**

**"(A) to conceal a violation of law, inefficiency, or administrative error;**

**"(B) to prevent embarrassment to a person, organization, or agency;**

**"(C) to restrain competition; or**

**"(D) to prevent or delay the release of information that does not require protection in the interest of transportation security, including basic scientific research information not clearly related to transportation security."**

**(2) Section 40119(b) of title 49, United States Code, is amended by adding at the end thereof the following:**

**"(3) Nothing in paragraph (1) shall be construed to authorize the designation of information as sensitive security information (as defined in section 15.5 of title 49, Code of Federal Regulations)—**

**"(A) to conceal a violation of law, inefficiency, or administrative error;**

**"(B) to prevent embarrassment to a person, organization, or agency;**

**"(C) to restrain competition; or**

**"(D) to prevent or delay the release of information that does not require protection in the interest of transportation security, including basic scientific research information not clearly related to transportation security."**

Explanation: This provision permanently amended the U.S. Code.

**Proposal to Delete *Old* Section 562:**

**[SEC. 562. Section 4 of the Act entitled "An Act to prohibit the introduction, or manufacture for introduction, into interstate commerce of switchblade knives, and for other purposes" (commonly known as the Federal Switchblade Act) (15 U.S.C. 1244) is amended—**

**(1) by striking "or" at the end of paragraph (3);**

**(2) by striking the period at the end of paragraph (4) and inserting"; or" and**

**(3) by adding at the end the following:**

**"(5) a knife that contains a spring, detent, or other mechanism designed to create a bias toward closure of the blade and that requires exertion applied to the blade by hand, wrist, or arm to overcome the bias toward closure to assist in opening the knife.".]**

Explanation: This provision permanently amended the U.S. Code.

**Proposal to Delete *Old* Section 563:**

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

**[SEC. 563. (a) APPLICABLE ANNUAL PERCENTAGE RATE OF INTEREST.—**Section 44(f)(1) of the Federal Deposit Insurance Act (12 U.S.C. 1831u(f)(1)) is amended—

**(1) in the matter preceding subparagraph (A), by inserting "(or in the case of a governmental entity located in such State, paid)" after "received, or reserved"; and**

**(2) in subparagraph (B)—**

**(A) in the matter preceding clause (i), by striking "nondepository institution operating in such State" and inserting "governmental entity located in such State or any person that is not a depository institution described in subparagraph (A) doing business in such State";**

**(B) by redesignating clause (ii) as clause (iii);**

**(C) in clause (i)—]**

**(i) in subclause (III)—**

**(I) in item (aa), by adding "and" at the end;**

**(II) in item (bb), by striking ", to facilitate" and all that follows through "2009"; and**

**(III) by striking item (cc); and**

**(ii) by adding after subclause (III) the following:**

**"(IV) the uniform accessibility of bonds and obligations issued under the American Recovery and Reinvestment Act of 2009;"; and**

**(D) by inserting after clause (i) the following:**

**"(ii) to facilitate interstate commerce through the issuance of bonds and obligations under any provision of State law, including bonds and obligations for the purpose of economic development, education, and improvements to infrastructure; and".**

**(b) RULE OF CONSTRUCTION.—**Section 44(f)(2) of the Federal Deposit Insurance Act (12 U.S.C. 1831u(f)(2)) is amended—

**(1) by redesignating subparagraphs (A) and (B) as clauses (i) and (ii), respectively, and moving the margins 2 ems to the right;**

**(2) by striking "No provision" and inserting the following:**

**"(A)IN GENERAL.—No provision"; and**

**(3) by adding at the end the following:**

**"(B)APPLICABILITY.—This subsection shall be construed to apply to any loan or discount made, or note, bill of exchange, financing transaction, or other evidence of debt, originated by an insured depository institution, a governmental entity located in such State, or a person that is not a depository institution described in subparagraph (A) doing business in such State.".**

**(c) EFFECTIVE PERIOD.—**The amendments made by this section shall apply with respect to contracts consummated during the period beginning on the date of enactment of this Act and ending on December 31, 2010.

Explanation: This provision permanently amended the U.S. Code.

**Proposal to Delete Old Section 564:**

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

**[SEC. 564. (a) SHORT TITLE.—This section may be cited as the "OPEN FOIA Act of 2009".**

**(b) SPECIFIC CITATIONS IN STATUTORY EXEMPTIONS.—Section 552(b) of title 5, United States Code, is amended by striking paragraph (3) and inserting the following:**

**"(3) specifically exempted from disclosure by statute (other than section 552b of this title), if that statute—**

**"(A)(i) requires that the matters be withheld from the public in such a manner as to leave no discretion on the issue; or**

**"(ii) establishes particular criteria for withholding or refers to particular types of matters to be withheld; and**

**"(B) if enacted after the date of enactment of the OPEN FOIA Act of 2009, specifically cites to this paragraph.".]**

Explanation: This provision permanently amended the U.S. Code.

**Proposal to Delete *Old* Section 565:**

**[SEC. 565. (a) SHORT TITLE.—This section may be cited as the "Protected National Security Documents Act of 2009".**

**(b) Notwithstanding any other provision of the law to the contrary, no protected document, as defined in subsection (c), shall be subject to disclosure under section 552 of title 5, United States Code or any proceeding under that section.**

**(c) DEFINITIONS.—In this section:**

**(1) PROTECTED DOCUMENT.—The term "protected document" means any record—**

**(A) for which the Secretary of Defense has issued a certification, as described in subsection (d), stating that disclosure of that record would endanger citizens of the United States, members of the United States Armed Forces, or employees of the United States Government deployed outside the United States; and**

**(B) that is a photograph that—]**

**(i) was taken during the period beginning on September 11, 2001, through January 22, 2009; and**

**(ii) relates to the treatment of individuals engaged, captured, or detained after September 11, 2001, by the Armed Forces of the United States in operations outside of the United States.**

**(2) PHOTOGRAPH.—The term "photograph" encompasses all photographic images, whether originals or copies, including still photographs, negatives, digital images, films, video tapes, and motion pictures.**

**(d) CERTIFICATION.—**

**(1) IN GENERAL.—For any photograph described under subsection (c)(1), the Secretary of Defense shall issue a certification if the Secretary of Defense determines that disclosure of that photograph would endanger citizens of the United States, members of the United States Armed Forces, or employees of the United States Government deployed outside the United States.**

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

- (2) CERTIFICATION EXPIRATION.**—A certification and a renewal of a certification issued pursuant to subsection (d)(3) shall expire 3 years after the date on which the certification or renewal, is issued by the Secretary of Defense.
- (3) CERTIFICATION RENEWAL.**—The Secretary of Defense may issue—
- (A)** a renewal of a certification at any time; and
  - (B)** more than 1 renewal of a certification.
- (4) NOTICE TO CONGRESS.**—The Secretary of Defense shall provide Congress a timely notice of the Secretary's issuance of a certification and of a renewal of a certification.
- (e) RULE OF CONSTRUCTION.**—Nothing in this section shall be construed to preclude the voluntary disclosure of a protected document.
- (f) EFFECTIVE DATE.**—This section shall take effect on the date of enactment of this Act and apply to any protected document.

Explanation: This provision permanently amended the U.S. Code.

**Proposal to Delete *Old* Section 566:**

**[SEC. 566. The administrative law judge annuitants participating in the Senior Administrative Law Judge Program managed by the Director of the Office of Personnel Management under section 3323 of title 5, United States Code, shall be available on a temporary reemployment basis to conduct arbitrations of disputes as part of the arbitration panel established by the President under section 601 of division A of the American Recovery and Reinvestment Act of 2009 (Public Law 111–5; 123 Stat. 164).**

Explanation: This provision permanently amended the U.S. Code.

**Proposal to Delete *Old* Section 568:**

**[SEC. 568. (a) SPECIAL IMMIGRANT NONMINISTER RELIGIOUS WORKER PROGRAM AND OTHER IMMIGRATION PROGRAMS.—**

- (1) EXTENSION.**—Subclauses (II) and (III) of section 101(a)(27)(C)(ii) of the Immigration and Nationality Act (8 U.S.C. 1101(a)(27)(C)(ii)) are amended by striking "September 30, 2009," each place such term appears and inserting "September 30, 2012,".
- (2) STUDY AND PLAN.**—Not later than 180 days after the date of the enactment of this Act, the Director of United States Citizenship and Immigration Services shall submit a report to the Committee on the Judiciary of the Senate and the Committee on the Judiciary of the House of Representatives that includes—
- (A)** the results of a study conducted under the supervision of the Director to evaluate the Special Immigrant Nonminister Religious Worker Program to identify the risks of fraud and noncompliance by program participants; and

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

**(B) a detailed plan that describes the actions to be taken by United States Citizenship and Immigration Services to improve the integrity of the program.**

**(3) PROGRESS REPORT.—**Not later than 240 days after the submission of the report under paragraph (2), the Director of United States Citizenship and Immigration Services shall submit a report to the Committee on the Judiciary of the Senate and the Committee on the Judiciary of the House of Representatives that describes the progress made in implementing the plan described in clause (a)(2)(B) of this section.

**(b) CONRAD STATE 30 J-1 VISA WAIVER PROGRAM.—**Section 220(c) of the Immigration and Nationality Technical Corrections Act of 1994 (8 U.S.C. 1182 note) is amended by striking "September 30, 2009" and inserting "September 30, 2012".

**(c) RELIEF FOR SURVIVING SPOUSES.—**

**(1) IN GENERAL.—**The second sentence of section 201(b)(2)(A)(i) of the Immigration and Nationality Act (8 U.S.C. 1151(b)(2)(A)(i)) is amended by striking "for at least 2 years at the time of the citizen's death".

**(2) APPLICABILITY.—**

**(A) IN GENERAL.—**The amendment made by paragraph (1) shall apply to all applications and petitions relating to immediate relative status under section 201(b)(2)(A)(i) of the Immigration and Nationality Act (8 U.S.C. 1151(b)(2)(A)(i)) pending on or after the date of the enactment of this Act.

**(B) TRANSITION CASES.—**]

**(i) IN GENERAL.—**Notwithstanding any other provision of law, an alien described in clause (ii) who seeks immediate relative status pursuant to the amendment made by paragraph (1) shall file a petition under section 204(a)(1)(A)(ii) of the Immigration and Nationality Act (8 U.S.C. 1154(a)(1)(A)(ii)) not later than the date that is 2 years after the date of the enactment of this Act.

**(ii) ALIENS DESCRIBED.—**An alien is described in this clause if—

**(I) the alien's United States citizen spouse died before the date of the enactment of this Act;**

**(II) the alien and the citizen spouse were married for less than 2 years at the time of the citizen spouse's death; and**

**(III) the alien has not remarried.**

**(d) SURVIVING RELATIVE CONSIDERATION FOR CERTAIN PETITIONS AND APPLICATIONS.—**

**(1) AMENDMENT.—**Section 204 of the Immigration and Nationality Act (8 U.S.C. 1154) is amended by adding at the end the following:

**"(1) SURVIVING RELATIVE CONSIDERATION FOR CERTAIN PETITIONS AND APPLICATIONS.—**

**"(1) IN GENERAL.—**An alien described in paragraph (2) who resided in the United States at the time of the death of the qualifying relative and who continues to reside in the United States shall have such petition described in paragraph (2), or an application for adjustment of status to that of a person admitted for lawful permanent residence based upon the family relationship described in paragraph (2), and any related applications, adjudicated notwithstanding the death of the qualifying relative, unless the Secretary of Homeland Security determines, in the

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

unreviewable discretion of the Secretary, that approval would not be in the public interest.

**"(2)ALIEN DESCRIBED.—An alien described in this paragraph is an alien who, immediately prior to the death of his or her qualifying relative, was—**

**"(A) the beneficiary of a pending or approved petition for classification as an immediate relative (as described in section 201(b)(2)(A)(i));**

**"(B) the beneficiary of a pending or approved petition for classification under section 203 (a) or (d);**

**"(C) a derivative beneficiary of a pending or approved petition for classification under section 203(b) (as described in section 203(d));**

**"(D) the beneficiary of a pending or approved refugee/asylee relative petition under section 207 or 208;**

**"(E) an alien admitted in 'T' nonimmigrant status as described in section 101(a)(15)(T)(ii) or in 'U' nonimmigrant status as described in section 101(a)(15)(U)(ii); or**

**"(F) an asylee (as described in section 208(b)(3))."**

**(2) CONSTRUCTION.—Nothing in the amendment made by paragraph (1) may be construed to limit or waive any ground of removal, basis for denial of petition or application, or other criteria for adjudicating petitions or applications as otherwise provided under the immigration laws of the United States other than ineligibility based solely on the lack of a qualifying family relationship as specifically provided by such amendment.**

**(e) CONFORMING AMENDMENT TO AFFIDAVIT OF SUPPORT REQUIREMENT.—Section 213A(f)(5) of the Immigration and Nationality Act (8 U.S.C. 1183a(5)) is amended by striking clauses (i) and (ii) and inserting:**

**"(i) the individual petitioning under section 204 of this Act for the classification of such alien died after the approval of such petition, and the Secretary of Homeland Security has determined for humanitarian reasons that revocation of such petition under section 205 would be inappropriate; or**

**"(ii) the alien's petition is being adjudicated pursuant to section 204(l) (surviving relative consideration)."**

Explanation: This provision permanently amended the U.S. Code.

**Proposal to Delete Old Section 573:**

**Proposal to Add New Section 538:**

***SEC. 538. For an additional amount for the "Office of the Under Secretary for Management" account, \$24,235,700, to increase the Department's acquisition workforce capacity and capabilities: Provided, That such funds may be transferred by the Secretary to any other account in the Department to carry out the purposes provided herein: Provided further, That such transfer authority is in addition to any other transfer authority provided in this Act: Provided further, That such funds shall be available only to supplement and not to supplant existing acquisition workforce activities: Provided further, That such funds shall be available for training, recruitment, retention, and hiring additional members of the acquisition workforce as defined by the Office of Federal Procurement Policy Act, as amended (41 U.S.C. 401 et seq.): Provided further, That such funds shall be available for information technology in support of acquisition workforce effectiveness or for management solutions to improve acquisition management.***

Explanation: This proposal is part of the DHS acquisition workforce initiative for which funds are requested through the Office of the Under Secretary for Management.

**Proposal to Add New Section 539:**

***SEC. 539. Section 559(e) of Public Law 111-83 is amended—  
(a) in the matter preceding the first proviso, by striking "law, sell" and inserting "law, hereafter sell"; and  
(b) in the first proviso—  
(1) by striking "shall be deposited" and inserting "shall hereafter be deposited"; and  
(2) by striking "subject to appropriations," and inserting "without further appropriations,".***

Explanation: This a technical change to ensure no legal ambiguity regarding final disposition of the LORAN-C program.

**Department of Homeland Security  
FY 2011 Explanation of Changes - General Provisions**

**Proposal to Add New Section 540:**

*SEC. 540. Notwithstanding any other provision of law, should the Secretary of Homeland Security determine that specific Immigration and Customs Enforcement Service Processing Centers, or other ICE-owned detention facilities, no longer meet the mission need, the Secretary is authorized to dispose of individual Service Processing Centers, or other ICE owned detention facilities, by directing the Administrator of General Services to sell all real and related personal property which support Service Processing Center, or other ICE-owned detention facilities, operations, subject to such terms and conditions as necessary to protect government interests and meet program requirements: Provided, That the proceeds, net of the costs of sale incurred by the General Services Administration and Immigration and Customs Enforcement shall be deposited as offsetting collections into a separate account that shall be available, subject to appropriation, until expended for other real property capital asset needs of existing Immigration and Customs Enforcement assets, excluding daily operations and maintenance costs, as the Secretary deems appropriate.*

Explanation: This allows the department to sell its ICE owned detention centers and retain the net proceeds.
